

Operating Instructions Refrigerator

It is **essential** to read the operating and installation instructions before setup, installation, and commissioning. This prevents both personal injury and damage to the appliance.

IMPORTANT SAFETY INSTRUCTIONS

This refrigeration appliance complies with current safety requirements. Inappropriate use can, however, lead to personal injury and material damage.

Please read the operating and installation instructions carefully before using the refrigeration appliance for the first time. They contain important information on safety, installation, use, and maintenance. This is to protect yourself from injury, and from damaging your refrigeration appliance.

Miele expressly and strongly advises that you read and follow the instructions in the chapter on installing the refrigeration appliance as well as in the “IMPORTANT SAFETY INSTRUCTIONS”.

Miele cannot be held liable for injury or damage caused by non-compliance with these instructions.

Keep these instructions in a safe place and pass them on to any future owner.

IMPORTANT SAFETY INSTRUCTIONS

Appropriate use

- ▶ This appliance is intended for use in domestic households and similar residential environments such as
 - staff kitchen areas in shops, offices and other working environments
 - farm houses and by clients in hotels, motels and other residential type environments
 - bed and breakfast type environments
 - catering and similar non-retail applications.

This appliance is not intended for use outdoors, in damp environments or in places exposed to rain.

- ▶ The refrigeration appliance is intended exclusively for domestic use for cooling and storing food and drinks.

The refrigeration appliance is not suitable for freezing food.

Any other use is at the owner's risk and could be dangerous.

- ▶ This refrigeration appliance is not suitable for storing and keeping cool medicines, blood plasma, laboratory preparations, or other similar substances or products that are subject to the Medical Device Directive. Incorrect use of the refrigeration appliance for such purposes may cause deterioration of the items stored. The refrigeration appliance is also not suitable for use in areas where there is a risk of explosion.

Miele cannot be held liable for damage resulting from incorrect or improper use or operation.

- ▶ This refrigeration appliance may only be used by people (including children) with reduced physical, sensory, or mental capabilities or lack of experience and knowledge if they are supervised while using it.

IMPORTANT SAFETY INSTRUCTIONS

Safety with children

- ▶ Children should be supervised in the vicinity of the appliance.
- ▶ Children may only use the appliance even without supervision if they have been shown how to use it in a safe manner, and if they are able to recognize and understand the potential risks of improper use.
- ▶ Children must not clean or service the appliance unless they are under supervision.
- ▶ To reduce the risk of injury, do not allow children to play in, on or near the appliance.
- ▶ Ensure that any packing material is disposed of safely and kept out of the reach of children. **DANGER** of suffocation!

IMPORTANT SAFETY INSTRUCTIONS

Technical safety

► The coolant circuit has been checked for leaks. The refrigeration appliance complies with statutory and regulatory requirements.

If the tubes are damaged, flammable refrigerant and harmful gases may escape and ignite.

► **Warning: fire hazard/flammable materials.** This symbol is on the compressor and indicates flammable materials. Do not remove this sticker.

The refrigerant inside the appliance (details on the data plate) is environmentally friendly but flammable.

The use of this refrigerant does, however, sometimes lead to a slight increase in the noise level of the appliance. In addition to the noise of the compressor, you might be able to hear the refrigerant flowing around the cooling circuit. Unfortunately, this cannot be avoided, but it does not affect the performance of the refrigeration appliance.

When transporting and installing the refrigeration appliance, ensure that no parts of the cooling circuit are damaged. Splashes of refrigerant can damage the eyes and leaking refrigerant can ignite.

In the event of damage:

- Avoid open flames or anything which creates a spark.
- Disconnect the refrigeration appliance from the power supply.
- Ventilate the room where the refrigeration appliance is located for several minutes.
- Contact Miele Service.

► The more refrigerant there is in a refrigeration appliance, the larger the room it should be installed in. In the event of a leakage, if the appliance is in a small room, there is the danger of a combustible gas/air mixture building up. For every 8 g of refrigerant, at least 3' 3" (1 m)³ of room space is required. The amount of refrigerant in the refrigeration appliance is stated on the data plate inside the appliance.

► To avoid the risk of damage to the appliance, make sure that the connection data (fuse rating, frequency and voltage) on the data plate corresponds to the household supply.

Check that this is the case before connecting the appliance. Consult a qualified electrician if in any doubt.

IMPORTANT SAFETY INSTRUCTIONS

▶ The electrical safety of the appliance can only be guaranteed when correctly grounded. It is essential that this standard safety requirement is met. If in any doubt please have the electrical installation tested by a qualified electrician.

▶ Temporary or permanent operation on an autonomous power supply system or a power supply system that is not synchronized with the grid power supply (e.g., island networks, back-up systems) is possible. A prerequisite for operation is that the power supply system complies with national and local codes.

The function and operation of the protective measures provided in the domestic electrical installation and in this Miele product must also be maintained in isolated operation or in operation that is not synchronized with the grid power supply, or these measures must be replaced by equivalent measures in the installation.

▶ If the power cord supplied is damaged, it must only be replaced by an original part to prevent a hazard for the user. Miele can only guarantee the safety of the appliance when original Miele parts are used. For safety reasons, this replacement should only be carried out by a qualified specialist or Miele Service.

▶ Do not connect the appliance to the electrical supply with a power bar or extension cord. These are a fire hazard and do not guarantee the required safety of the appliance.

▶ If moisture gets into electrical components or into the power cord, it could cause a short circuit. Therefore, do not operate the machine in areas where there may be moisture or splashing water (e.g., garages, laundry rooms).

▶ This appliance must not be installed and operated in mobile installations (e.g. on a ship).

▶ Do not use a damaged appliance. It could be dangerous. Check the appliance for visible signs of damage.

▶ For safety reasons, this appliance may only be used after it has been built in.

IMPORTANT SAFETY INSTRUCTIONS

▶ During installation, side-by-side heater installation, maintenance and repair work, the appliance must be disconnected from the electrical power supply. It is only completely isolated from the electricity supply when:

- the circuit breaker has been tripped, or
- the screw-type fuses on the electrical service panel have been removed or
- the power cord has been unplugged. Pull on the plug and not on the cord when removing it from the outlet.

▶ Installation, repair, and maintenance work should only be performed by a Miele-authorized service technician.

Work by unqualified persons could be dangerous and may void the warranty.

▶ Any manufacturer's warranty may be void if the appliance is not repaired by a Miele approved service technician.

▶ Faulty components must only be replaced by genuine Miele replacement parts. Miele can only guarantee the safety standards of the appliance when Miele replacement parts are used.

▶ This refrigeration appliance is supplied with a special bulb to cope with particular conditions (e.g., temperature, moisture, chemical resistance, abrasion resistance, and vibration). This bulb must only be used for the purpose for which it is intended. The bulb is not suitable for room lighting. Replacement bulbs should only be installed by an authorized technician or by Miele Customer Service.

Proper installation

▶ When installing the refrigeration appliance, it is a mandatory requirement to follow the installation instructions supplied with it.

▶ Two people are required to install the appliance.

▶ Change the door hinging (if necessary) as described in these installation instructions.

▶ Only install the refrigeration appliance in a solid, rectangular, and level housing unit, positioned on an even and level floor.

IMPORTANT SAFETY INSTRUCTIONS

Correct use

- ▶ This refrigeration appliance is designed for use within specific ambient temperatures (climate range). Do not use in ambient temperatures for which it is not designed. The climate range is stated on the data plate in the interior cabinet of the refrigeration appliance. A lower ambient temperature will cause the compressor to switch off for longer periods, meaning that the refrigeration appliance is unable to maintain the required temperature.
- ▶ **WARNING! DANGER of overheating!** Do not cover or block the air vents. This can impair the efficiency of the appliance, increase the power consumption and cause damage to the appliance.
- ▶ If storing food which contains a lot of fat or oil in the appliance, make sure that it does not come into contact with plastic components as this could cause stress cracks or break the plastic.
- ▶ Risk of fire and explosion. Do not store any explosive materials or products containing flammable propellants (e.g., spray cans) in the appliance. Electrical components can cause flammable mixes of gases to ignite.
- ▶ **WARNING! Risk of explosion.** Do not operate any electrical equipment (e.g., an electric ice-cream maker) inside the refrigeration appliance. Risk of sparking and explosion.
- ▶ When eating stored food, there is a danger of food poisoning. Storage times will depend on several factors, including the freshness and quality of the food, as well as the temperature at which it is stored. Observe the manufacturer's "use-by" dates and storage instructions.

Accessories and parts

- ▶ Use only genuine original Miele parts. If parts or accessories from other manufacturers are used, the warranty may become invalid.
- ▶ Miele will guarantee to supply functional spare parts for a minimum of 10 years and up to 15 years following the discontinuation of your refrigeration appliance.

IMPORTANT SAFETY INSTRUCTIONS

Cleaning and maintenance

- ▶ Do not use any oil or grease on the door seals. They can cause the seals to deteriorate over time.
- ▶ **WARNING! DANGER of injury and damage!** Do not use any mechanical tools or other types of aid which are not recommended by the manufacturer to accelerate the defrosting process.
- ▶ Never use a steam cleaner to clean the appliance. The steam can reach the electrical components and cause a short circuit.
- ▶ Sharp edged or pointed objects will damage the evaporator, causing irreversible damage to the appliance. Do not use sharp edged or pointed objects to
 - remove frost or ice,
 - separate frozen foods or remove ice trays.
- ▶ Never place electric heaters or candles in the appliance to defrost it. These can damage the plastic parts.
- ▶ Do not use defrosting sprays or de-icers, as they could contain substances which could damage the plastic parts or which might cause the build-up of gases and pose a danger to health.

Transport

- ▶ To avoid damage to the appliance, always transport it upright and in its packaging.
- ▶ Risk of injury and damage. The refrigeration appliance is very heavy and must be transported by two people.

IMPORTANT SAFETY INSTRUCTIONS

Disposal of your old appliance

▶ **DANGER!** Risk of child entrapment! Children could become trapped in the refrigeration appliance and could suffocate.

- Remove the appliance door(s).
- Remove the drawers.
- Leave the adjustable shelves in the refrigeration appliance so children cannot climb inside.
- If your old refrigeration appliance has a door lock, destroy it. This will prevent the risk of children playing accidentally locking themselves in and endangering their lives.

▶ Risk of electric shock!

- Cut the electrical plug off the power cord.
- Cut the power cord off the old appliance.

Dispose of the electrical plug and power cord separately from the old appliance.

▶ Ensure that the appliance is not stored in the vicinity of gasoline or inflammable gases and liquids during and after disposal.

▶ If your old refrigeration appliance has a door lock, destroy it. This will prevent the risk of children playing accidentally locking themselves in and endangering their lives.

▶ **WARNING!** Risk of fire due to escaping oil or refrigerant!

The refrigerant and oil inside the appliance are flammable. In high enough concentrations, escaping refrigerant or oil may ignite if they come into contact with an external heat source.

During disposal, make sure that the cooling circuit is not damaged in order to prevent refrigerant and oil escaping in an uncontrolled manner (see the data plate for details of the refrigerant).

▶ Splashes of coolant can cause damage to the eyes. Be careful not to damage any part of the pipework while awaiting disposal, e.g. by

- puncturing the coolant channels in the evaporator,
- kinking any pipework,
- scratching the surface coating.

Symbol on the compressor (depending on model)

This information is only relevant for recycling. There is no risk during normal operation.

IMPORTANT SAFETY INSTRUCTIONS

- ▶ The oil in the compressor can be fatal if swallowed or if it penetrates the airways.

Symbol on the rear of the appliance (depending on model)

This label or a similar one is only relevant for recycling. Do not remove the label.

- ▶ This information refers to the foamed-in panels in the door and/or the housing.

Disposal of packaging material

The packaging is designed to protect the appliance from damage during transportation. The packaging materials used are selected from materials which are environmentally friendly for disposal and should be recycled.

Ensure that any plastic wrappings, bags, etc. are disposed of safely and kept out of the reach of children. Return the packaging to your dealer.

Disposing of your old appliance

Electrical and electronic appliances contain many valuable materials. They also contain certain materials, compounds, and components which were essential for their correct functioning and safety. These could be hazardous to your health and to the environment if disposed of with household waste or if handled incorrectly. Please do not, therefore, dispose of your old appliance with household waste.

Take care not to damage your refrigerator before or during disposal in an authorized, environmentally-friendly manner.

This is to ensure that refrigerant in the cooling circuit and oil in the compressor is contained, and will not leak into the environment.

Instead, please make use of officially designated collection and disposal locations to dispose of and recycle electrical and electronic appliances in your local community, with your dealer, or with Miele, free of charge. By law, you are solely responsible for deleting any personal data from the appliance prior to

disposal. You are legally obliged to remove any old batteries which are not securely enclosed by the appliance and to remove any lamps without destroying them, where this is possible. These must be taken to a suitable collection point where they can be handed in free of charge. Please ensure that your old appliance poses no risk to children while being stored for disposal.

Installation

Installation site

 **WARNING!** Risk of damage and injury due to the refrigeration appliance tipping over.

This refrigeration appliance is very heavy and can tip forward when the door is open.

Keep the appliance door(s) closed until the refrigeration appliance has been built in. The refrigeration appliance must be secured in its building-in niche in accordance with the operating and installation instructions.

 Fire hazard and risk of damage from appliances that give off heat. Appliances that give off heat can catch fire and set fire to the refrigeration appliance.

This refrigeration appliance must not be installed underneath a cooktop.

 Fire hazard and risk of damage from open flames. Open flames can set fire to the refrigeration appliance.

Keep open flames (such as a candle) away from the refrigeration appliance.

This appliance should be installed in a dry, well-ventilated room.

 Risk of damage due to high humidity.

In environments with high humidity, condensation can build up on external refrigeration-appliance panels. This condensate can cause corrosion on external appliance panels.

Install the refrigeration appliance in a dry and/or air-conditioned room with sufficient ventilation.

After installation please make sure that the appliance door(s) closes (close) properly and the refrigeration appliance is installed in accordance with these installation instructions. The specified ventilation specifications must be observed.

When deciding where to install your refrigeration appliance, please keep in mind that it will use more energy if installed near to a heater, a range, or another appliance that gives off heat. Avoid direct sunlight. The higher the ambient temperature, the longer the compressor runs and the higher the energy consumption is.

When installing the refrigeration appliance, please note the following:

- The electrical outlet must be easily accessible in an emergency and not concealed behind the appliance.
- The electrical plug and power cord must not touch the rear of the refrigeration appliance as they could be damaged by vibrations from the appliance.
- Do not plug in other appliances behind the refrigeration appliance.
- **WARNING!** When installing the refrigeration appliance, make sure that the power cord does not get trapped or damaged.
- **WARNING!** Do not position or operate power bars, distributor strips, or other electronic devices (such as halogen transformers) at the rear of the appliance.
- The floor at the installation site must be horizontal and level and must be as high as the surrounding floor.

Side-by-side combinations

 Risk of damage due to condensation on external appliance panels. In environments with high humidity and a lack of ventilation, condensation can build up on external appliance panels, which can cause corrosion. Do not place refrigeration appliances directly next to or on top of one another.

Your refrigeration appliance can be installed with another refrigeration appliance next to it as it is equipped with integrated heaters in the side panels. Each of the two refrigeration appliances must be built into a separate housing unit.

Installation

Climate range

This refrigeration appliance is designed for use within specific ambient temperatures (climate range). Do not use in ambient temperatures for which it is not designed. The climate range is stated on the data plate in the interior cabinet of the refrigeration appliance.

Climate range	Ambient temperature
SN	50 to 90°F (10 to 32°C)
N	61 to 90°F (16 to 32°C)
ST	61 to 100°F (16 to 38°C)
T	61 to 109°F (16 to 43°C)
SN-ST	50 to 100°F (10 to 38°C)
SN-T	50 to 109°F (10 to 43°C)

A lower ambient temperature leads to the compressor switching off for longer periods. This can cause the internal temperature in the refrigeration appliance to rise with the risk of food deteriorating and going off.

Ventilation

 **WARNING!** Fire hazard and risk of damage due to insufficient ventilation.

If the refrigeration appliance is not ventilated sufficiently, the compressor will run more frequently and for longer periods. This causes increased energy consumption and an increased compressor operating temperature, which can result in damage to the compressor.

Please ensure that there is adequate ventilation around the refrigeration appliance.

It is essential to observe the required ventilation gaps.

The ventilation gaps must never be obstructed.

They must also be cleaned on a regular basis to remove dust.

There must be a gap of at least ½ inch (13 mm) between the back of the appliance and the rear wall. If this gap is not maintained, this will result in increased energy consumption.

Air at the back of the refrigeration appliance gets warm. The appliance housing unit must therefore be constructed to allow sufficient space for ventilation (see “Installation dimensions” and the installation instructions provided).

- To ensure ventilation an air channel of a minimum 1 1/2" (40 mm) depth must be provided at the back of the appliance.
- The ventilation slits in the toe-kick, in the cabinet and under the top of the cabinet must provide a total

passage volume of at least 31"² (200 cm²) to allow the warm air to dissipate unimpeded.

- If you wish to fit a grille in the ventilation openings, the ventilation openings must be larger than 31"² (200 cm²). The passage volume of 31"² (200 cm²) is the total area of the opening slits in the grille.
- Important! The larger the ventilation slits, the more economically the appliance will work.

Lower ventilation slit

The appliance can be ventilated via the cabinet plinth with the ventilation grille supplied or with a minimum ventilation opening of 31 in² cross-section area. When using the grille supplied, please proceed as follows:

- Cut an opening in plinth ② as shown in the diagram.
- Place ventilation grille ① in the opening.
- Push snap fasteners ③ into the ventilation grille from behind until the hooks touch the plinth.
- Reinstall the plinth with the ventilation grille.

Cabinet door

An cabinet door is required.

The cabinet door must be at least 5/8" (16 mm) / 3/4" (19 mm) thick.

– Weight of the door panel

⚠ If the door panel is too heavy damage can occur.

Installing a door panel which is heavier than the maximum permitted weight could damage the hinges. This can cause subsequent functional problems.

Before installing the door panel, ensure that the weight of the door panel does not exceed the maximum permitted weight.

The maximum permissible weight of the door panel is:

Refrigeration appliance	lb (kg)
KS 7793 D	57 (26)

Installation

Horizontal and vertical gaps

Depending on the style of kitchen cabinetry, the thickness and edge radius of the custom door panel and the gap that runs around the door, vertically and horizontally, are specified.

It is essential to pay attention to the following:

- Horizontal gap

The gap between the door panel and the housing-unit door above or below it must be at least 1/8" (3 mm).

- Vertical gap

If the gap between the refrigeration-appliance door panel and the adjoining housing-unit door or wall on the hinged side is too small, the appliance door could collide with the adjoining housing-unit door or wall when opened.

It may be necessary to adjust the size of this gap to suit the thickness and edge radius of the door panel.

This must be taken into consideration when planning your kitchen and when replacing an old refrigeration appliance with a new one to ensure the installation conditions required are met.

Door panel thickness A [in (mm)]	Gap X [in (mm)] for different edge radii B			
	R0	R1.2	R2	R3
≥5/8"-3/4" (16–19)	min. 1/8" (3)			
13/16" (20)	3/16" (5)	3/16" (4)	3/16" (4)	1/8" (3.5)
13/16" (21)	3/16" (5.5)	3/16" (5)	3/16" (4.5)	3/16" (4)
7/8" (22)	1/4" (6.5)	1/4" (6)	3/16" (5.5)	3/16" (5)

Adjoining housing-unit door

A = Door-panel thickness

B = Edge radius

X = Gap

Adjoining side wall

A = Door-panel thickness

B = Edge radius

X = Gap

Tip: Fit a spacer between the housing-unit body and the side wall. This way you will get a sufficiently wide gap.

Tip: Please also see the diagram and information on the following pages on calculating the cabinet door height.

Installation

Installation dimensions

Installation in a tall cabinet/side view

All dimensions are given in inches (mm).

* The declared energy consumption was achieved with a niche depth of $22 \frac{1}{16}''$ (560 mm). The refrigeration appliance is fully capable of functioning at a niche depth of $21 \frac{5}{8}''$ (550 mm) but will consume slightly more energy. Before installation, ensure the housing-unit dimensions are the correct size.

Niche height

A

KS 7793 D

$69 \frac{3}{4}''$ - $70 \frac{3}{8}''$ (1,772–1,788 mm)

Connections and ventilation

All dimensions are given in inches (mm).

The specified ventilation cross-sections must be adhered to in order to ensure the correct functioning of the refrigeration appliance.

- ① Front view
- ② Power cord, length = 7' 2" (2,200 mm)
- ③ Ventilation cut-out min. $31''^2$ (200 cm²)
- ④ Ventilation
- ⑤ No connections permitted in the rear panel

Installation

Limiting the opening angle of the appliance door

The door hinges are set at the factory to enable the appliance door to be opened wide.

If the opening angle of the appliance door needs to be limited to approx. 90°, the hinge can be adjusted to accommodate this.

The locking pins for limiting the door opening must be installed before the appliance is installed.

- Insert the locking pins supplied for limiting the door opening into the hinges from above.

The appliance door opening angle is now limited to approximately 90°.

Electrical connection

Risk of electric shock!

The appliance must only be switched on when it has been installed in accordance with the installation instructions.

Ground the appliance.

The appliance must not be grounded via a gas pipe.

If in doubt, have a suitably qualified and experienced electrician check that the installation complies with relevant regulations.

Do not install a fuse into neutral current or grounding electrical circuit.

Do not use extension cords or ungrounded (two prong) adapters.

Do not use a frayed or damaged power cord.

Risk of electric shock!

For protection against electric shock, this appliance is equipped with a pole-free plug which is protected against reverse polarity. The electrical outlet must be properly grounded.

Do not remove the round grounding connector pin from the plug.

Use only a grounded plug adapter.

Wait for 1 hour after installation before plugging the appliance into the power supply. This allows coolant and refrigerator oil to settle in accordance with regulations.

Ensure that the voltage of the power supply corresponds with the connection voltage of the appliance. A power supply of 110–120 V, 60 Hz and 10–16 Amp, which is protected by a power switch or a fuse, is required to operate the appliance.

The manufacturer recommends operating the appliance on a dedicated circuit to avoid overloading the electrical circuit.

All relevant legal electrical, fire, and building regulations must be observed when installing the electrical outlet and/or the appliance.

In certain countries, appliances are required to be connected to the electrical supply via a wall-mounted ON/OFF switch.

To avoid the risk of fire, electric shock, or other injuries, the appliance must be installed and connected by a suitably qualified electrician in accordance with all relevant local and national regulations and standards, including fire prevention.

The socket must not be concealed behind the appliance and must be easily accessible so that the appliance can be quickly disconnected from the electrical supply in case of an emergency.

Installation

If the outlet is no longer accessible after installation, an additional means of disconnection must be provided for all poles. Suitable means of disconnection include switches with an all-pole disconnect device with a contact opening of at least 1/8" (3 mm). These can be circuit breakers, fuses, and relays.

The plug and power cord must not come into contact with the back of the appliance as vibrations can cause damage to these components. This could result in a short circuit.

Do not plug other appliances into electrical outlet behind this appliance.

Temporary or permanent operation on an autonomous power supply system or a power supply system that is not synchronized with the grid power supply (e.g., island networks, back-up systems) is possible. A prerequisite for operation is that the power supply system complies with the specifications of EN 50160 or an equivalent standard. The function and operation of the protective measures provided in the domestic electrical installation and in this Miele product must also be maintained in isolated operation or in operation that is not synchronized with the grid power supply, or these measures must be replaced by equivalent measures in the installation.

If the power cord needs to be replaced, this must be performed by a qualified technician.

Connecting the appliance

- Insert the electrical plug into the back of the refrigeration appliance.

Make sure that the electrical plug has clicked into position correctly.

- Insert the electrical plug of the refrigeration appliance into the socket.

The refrigeration appliance is now connected to the electricity supply.

How to save energy:

- Installation location** The refrigeration appliance has to cool more often at higher ambient temperatures and consumes more energy in the process. Therefore, you should:
- Install the refrigeration appliance in a well-ventilated room.
 - Do not install the refrigeration appliance near to a heat source (heater element, range).
 - Protect the refrigeration appliance from direct sunlight.
 - Ensure an ideal ambient temperature of 68°F (20°C).
 - Clean the ventilation gaps on a regular basis to remove any dust.
- Temperature setting** The colder the temperature, the higher the energy consumption. The following settings are recommended:
- 39 to 41°F (4 to 5°C) in the refrigerator section.
 - PerfectFresh Active zone just above 32°F (0°C).
- Use** Energy consumption is increased by heat input and impeded air circulation. Therefore, you should:
- Only open the appliance door(s) when necessary and for as short a time as possible. Arrange the food in such a way that makes it easy to find in the appliance.
 - Always close the appliance door(s) properly after opening them.
 - Allow hot food and drinks to cool down before placing them in the refrigeration appliance.
 - Store food well packaged or covered.
 - Do not overfill the compartments to allow air to circulate.
 - Place frozen food in the refrigerator section to defrost.
 - Keep drawers and shelves arranged as they were when the appliance was delivered.

Guide to the appliance

- ① Display
- ② Fan with lighting
- ③ Dry back wall to prevent condensate
- ④ Adjustable shelf with lighting (FlexiLight 2.0)
- ⑤ Egg tray
- ⑥ Door shelf with fine adjustment
- ⑦ Adjustable shelf with pivotable glass shelf (FlexiTray)
- ⑧ Drawer module (CompactCase) for storing small containers
- ⑨ Flexible bottle rack
- ⑩ Space for a baking tray (ComfortSize)
- ⑪ Bottle shelf with bottle holder
- ⑫ Dividing plate with bottle rack; with humidifier and water container for the humidity-controlled compartment
- ⑬ Lid for setting the moisture level in the humidity-controlled compartment
- ⑭ Humidity-controlled compartment for fruit and vegetables (PerfectFresh Active zone)
- ⑮ Organization box
- ⑯ Condensate channel and drain hole
- ⑰ Dry compartment with low temperature for food which goes off quickly (PerfectFresh Active zone)

Guide to the appliance

Status display

The display can be scratched by pointed or sharp objects, e.g., pens. Only touch the display with your fingertips. It is possible that the display will not react to finger contact if your fingers are cold.

- ① Temperature display for the refrigerator section
- ② Settings mode sensor control  for adjusting various settings in Settings mode
- ③ Display for Miele@home connection status (only visible when the Miele@home function has been set up)
- ④ Demo-mode display (only visible when the Demo-mode function has been switched on)

Using the appliance

- Touch the area/symbol you want on the status display.
- Swipe left or right across the display until the value/symbol you want is shown in the middle.
- Tap on the option you want on the display to confirm. The selected value/symbol will light up orange (except for a few exceptions).
- To leave the Settings level, tap on  or OK.

Settings mode

In Settings mode, you can select the following appliance functions and alter their settings to some extent:

Symbol	Function	Factory default
	Switching the Party-mode function on or off (see “Selecting additional settings”)	Off
	Switching the Vacation-mode function on or off (see “Selecting additional settings”)	Off
	Switching the lock function on or off (see “Selecting additional settings”)	 (Off)

Adjusting the interior fittings

Using the door-shelf fine adjustment

Use the fine adjustment if you need greater height clearance on the door shelf/bottle shelf.

You can change the height of the door shelf while it is loaded.

- Hold the door shelf in both hands, press the gray buttons on both sides under it and move it.

Repositioning the door shelf with fine adjustment

Only move the door/bottle shelves in the appliance door when they are empty.

- Take hold of the sides of the door shelf with both hands so that you are touching each of the gray buttons underneath it.
- Press the gray buttons at the same time and slide the door shelf up and off the guide rails.

- Remove the guide rail from the lugs and move it to the desired position.
- Move the second guide rail parallel to the first rail.
- Push the shelf down onto the guide rails.

Guide to the appliance

Moving the door shelf/bottle shelf

Only move the door/bottle shelves in the appliance door when they are empty.

- Push the door/bottle shelves upward, then remove them by pulling them forward.
- Replace the door/bottle shelves at the required height.

Clipping the egg trays on

- Clip the egg trays onto the rear edge of the door shelf.

Adjusting or removing the bottle holder

The non-slip fins of the bottle holder make bottles more secure when you open and close the appliance door.

The bottle holder can be moved left or right to create more room for drink cartons.

The bottle holder can be removed completely, e.g., for cleaning:

- Pull the bottle holder up to remove it.

Moving the shelf/shelf with lighting

The shelves can be adjusted according to the height of the food.

- Raise the shelf slightly at the front and pull it forward a little.
- Lift it until the notches at the side are in line with the shelf supports. The shelf can then be raised or lowered to the required level.
- Push the shelf in.

Make sure that the shelf with lighting clicks into position.

Stoppers prevent the shelves from being dislodged by mistake.

Using the storage drawer (Compact-Case)

The storage drawer (CompactCase) is suitable for storing small containers and tubes.

However, it can also be moved down slightly to accommodate larger containers.

- Pull the drawer out as far as it will go. Tilt the drawer up slightly and remove the drawer.

- Now insert the drawer from above into the lower holder in the support as required.

Guide to the appliance

Moving the storage drawer (Compact-Case)

- Remove the drawer.

- Use both hands to slightly lift the shelf including the holder at the front 1.).
- Pull the shelf forward slightly 2.) and lift it, making sure that the notches on the left and right are in line with the shelf supports.
- Move the shelf up or down as needed.
- Push the shelf back as far as it will go.
- Insert the drawer from above into the upper or lower holder in the support as required.

Moving the adjustable shelf with pivotable glass shelf (FlexiTray)

⚠ Risk of damage caused by loading too much food and not distributing items evenly.

Loading too much food and not distributing items evenly can damage the pivotable glass shelf.

Do not exceed the maximum load size of 17.6 lb (8 kg). Arrange food items evenly across the full surface of the shelf.

The pivotable glass shelf can be turned 180° clockwise, improving access to the food placed at the back.

⚠ Danger of injury from dropping the glass shelf.

The pivotable glass shelf can come out when removing the adjustable shelf, causing the glass shelf to drop out of the tray and break.

Keep hold of the pivotable glass shelf when removing the adjustable shelf.

You can move the adjustable shelf with pivotable glass shelf as you wish.

Adjusting the bottle rack

The bottle rack can be placed at different positions in the appliance.

- Lift the bottle rack slightly at the front, pull it forward a little, lift the recess over the shelf supports, and move the shelf up or down.

The stop bar at the back must face upward to prevent the bottles from touching the back wall.

Stoppers prevent the bottle rack from being dislodged by mistake.

Using the bottle rack in the dividing plate

In the dividing plate, either the bottle rack or the glass shelf can be used.

- Remove the glass shelf at the back of the dividing plate and keep it in a safe place.
- Place the bottles as far back as possible with the bases at the back of the appliance.

Tip: If the bottles hang over the edge of the bottle rack, adjust the bottom bottle shelf by moving it upward.

Removing and reinserting the organization box

The additional organization box in the PerfectFresh Active zone makes it easier for you to organize your food.

- Lift the box at the rear first when you want to remove it.
- To reinsert the organization box in the drawer, place the front section in first.

Guide to the appliance

Inserting the adapters for the baking tray

The supplied adapters enable you to insert a baking tray in your refrigerator section with ease. The baking tray can be no more than 18 3/8" (466 mm) wide, 14 7/16" (386 mm) deep, and 2" (50 mm) high.

- Snap the adapters into place on the lowermost shelf supports on the side walls of the refrigerator section.
- Open the appliance door as far as it will go.

- Place the baking tray on the adapters in the refrigerator section and slide it in as far as it will go.

Tip: Let the baking tray cool down to room temperature before putting it in the refrigerator section.

Moving the carbon filter

KKF-FS carbon filters with holder (Active AirClean) are available as optional accessories (see "Optional accessories").

When you are storing very strong-smelling food (e.g., cheese):

- Place the holder with the carbon filters on the adjustable shelf where this food is being kept.
- Change the carbon filters sooner if necessary.
- Use more carbon filters (with holders) in the appliance (see "Optional accessories").

The holder for the carbon filters sits on a protective strip at the back of the adjustable shelf.

- To move the carbon filter, pull the holder up and off the protective strip.
- Then pull the protective strip off the shelf.
- Reinstall it on the shelf you wish to use it on.

- Reinstall the holder on the protective strip.

Accessories supplied

Adjustable shelf with pivotable glass shelf (FlexiTray)

Adapters for the baking tray

Egg tray

Bottle holder

Organization box

Flexible bottle rack

Optional accessories

A range of useful Miele accessories and care products are available for your appliance.

KKF-FS carbon filter with holder (Active AirClean)

Carbon filters neutralize unpleasant odors in the refrigerator section for improved air quality.

KKF-RF replacement charcoal filters (Active AirClean)

Replacement filters to fit the holder are available. We recommend replacing the charcoal filters every 6 months.

Bottle rack

For a description, see “Guide to the appliance – Adjusting the interior fittings”.

Organization box

For a description, see “Guide to the appliance – Adjusting the interior fittings”.

Optional accessories can be ordered from the Miele webshop.

Switching on and off

Before using for the first time

- Remove all packaging material and protective film.
- Clean the inside of the appliance and the accessories (see “Cleaning and care”).

Connecting the appliance

- Connect the refrigeration appliance to the electricity supply as described in “Electrical connection”.

Miele will then appear on the appliance display, followed by .

Filling and inserting the water container for the humidifier

- Fill the water container for the humidifier with fresh drinking water (see “Storing food in the PerfectFresh Active zone – Humidity-controlled compartment”).
- Place the water container in the dividing plate between the refrigerator section and PerfectFresh Active zone (see “Storing food in the PerfectFresh Active zone – Humidity-controlled compartment”).

Switching on the appliance

- Open the appliance door.
- Tap  on the display.

The refrigeration appliance will start to cool and the interior lighting will come on when the appliance door is opened.

The refrigeration appliance will adjust to the preset temperature.

To enable the temperature to get sufficiently cold inside the refrigeration appliance, allow the appliance to run for a few hours. Do not place food in the refrigeration appliance until it has reached the preset temperature.

Switching off the appliance

- Touch the temperature display on the display.
- Swipe right until  is shown in the middle.
- Tap .

The cooling and interior lighting are switched off.

 will appear in the display.

Please note: The refrigeration appliance is not disconnected from the power supply when it is switched off.

To note when switching off for longer periods of time

If, during a long absence, the refrigeration appliance is switched off but not cleaned and the door is left shut, there is a danger of bacteria building up inside the appliance.

It is essential to clean the refrigeration appliance before a long period of absence.

If the refrigeration appliance is not going to be used for a longer period of time, observe the following:

- Turn the appliance off.
- Unplug the appliance's electrical plug or switch off the breaker.
- Take the water container for the humidifier out of the appliance, empty it, then clean and dry it.
- Clean the refrigeration appliance and leave the door open to air the appliance and avoid odors building up inside.

The correct temperature

It is very important to set the correct temperature to ensure the shelf life of food. Reducing the temperature reduces the growth rate of microorganisms. Food does not spoil as quickly.

The temperature in the appliance will rise:

- the more often the appliance door is opened and the longer it is kept open
- the more food that is stored in it
- the warmer the food is that is being put into it
- the higher the ambient temperature surrounding the refrigeration appliance is. This refrigeration appliance is designed for use within specific ambient temperatures (climate range). Do not use in ambient temperatures for which it is not designed.

... in the refrigerator section and in the PerfectFresh Active zone

We recommend a temperature of **39°F (4°C)** in the refrigerator section.

The temperature in the PerfectFresh Active zone is controlled automatically and maintained at **32 to 37°F (0 to 3°C)**.

Automatic cold air circulation (Dyna-Cool)

The fan automatically turns on when the cooling system for the refrigerator section turns on. It distributes the temperature in the refrigerator section to all areas evenly so that all the food inside will be chilled to about the same degree.

Temperature display

In normal operation, the temperature display shows the **current average refrigerator section temperature** inside the refrigeration appliance.

Depending on the ambient temperature and the temperature setting, it can take the appliance a few hours to reach the temperature required and for this temperature to then be shown as a constant temperature on the display.

Setting the temperature

- Touch the temperature display on the display.
- Swipe left or right until the temperature you want is shown in the middle.
- Tap the temperature you want to confirm.

The temperature display will then change back to the current temperature in the refrigeration appliance.

Possible temperature settings

- Refrigerator section: 37 to 48°F (3 to 9°C)

Adjusting the PerfectFresh Active zone temperature

The temperature in the PerfectFresh Active zone is automatically maintained between 32 and 37°F (0 and 3°C).

However, if you would like it to be warmer or colder, e.g., when storing fish, you can adjust the temperature slightly in increments.

- Tap .
- Swipe left or right until  is shown in the middle.
- Tap .

- Swipe left or right until the setting you want (1: lowest temperature; 9: highest temperature) is shown in the middle.
- Tap on the setting you want to confirm.

The default setting for the temperature is 5.

Under certain circumstances, a setting from 1 to 4 can cause negative temperatures to be reached. This can cause food to freeze.

Check the temperature setting.

Using Automatic SuperCool

Automatic SuperCool ❄️

When switched on, the Automatic SuperCool function ❄️ can be used to rapidly reduce the temperature in the **refrigerator section** to its lowest setting (depending on the ambient temperature). The refrigeration appliance will work at full power and lower the temperature. Select this function for the rapid chilling of large amounts of fresh food or drink.

When the Automatic SuperCool function ❄️ is switched on, the appliance may make more noise than usual.

The Automatic SuperCool function ❄️ should be switched on **4 hours before** placing food or drinks in the refrigerator section.

The Automatic SuperCool function ❄️ will switch itself off automatically after approx. 12 hours. The appliance will then run at normal power again.

Tip: To save energy, you can switch the Automatic SuperCool function ❄️ off yourself once food and drinks are sufficiently chilled.

Switching Automatic SuperCool ❄️ on and off

- Touch the temperature display for the refrigerator section.
- Touch ❄️ to switch the Automatic SuperCool function on and off again.

When the Automatic SuperCool function is **switched on**, ❄️ will light up orange.

- Tap on the temperature display to leave the Settings level.

Selecting additional settings

Explanation of the different settings

Only the settings that require further explanation are described below.

The door alarm and other warnings are automatically suppressed when you are in Settings mode .

Party mode

The Party mode function  is recommended if you wish to chill large amounts of fresh food or drink quickly.

Tip: Switch on the Party mode function  approx. 4 hours before placing food and drinks in the appliance.

When Party mode  is switched on, the Automatic SuperCool  function is switched on automatically.

Party mode  cannot be switched on if Vacation mode  is switched on.

The Party mode function  will switch itself off automatically after approx. 24 hours. However, you can switch the Party mode function  off early at any time.

Vacation mode

The Vacation mode function  is useful when you go on vacation, for example, if you do not wish to switch off the refrigerator section completely or do not need a high degree of cooling.

If Vacation mode  is switched on, this will be indicated on the status display. It can be switched off via the status display or Settings mode .

The refrigerator section is regulated at a temperature of 59°F (15°C), which automatically sets the temperature in the PerfectFresh Active zone to between 48 and 53°F (9 and 12°C), thus remaining in operation while saving energy.

Food which does not spoil quickly can be stored in the refrigerator for some time at this moderate refrigerator temperature. Energy consumption is lower than in normal operation. This also prevents the build-up of odors and bacteria which can occur if the refrigerator section is switched off and the appliance door is closed.

 Health risk caused by contaminated food.

The usability and quality of food in the refrigerator section may deteriorate if the temperature remains above 37°F (4°C) for an extended period.

Only ever switch on the Vacation-mode function  for a limited period.

Do not store any temperature-sensitive food which spoils easily, such as fruit, vegetables, fish, meat, and dairy products, during this time.

Selecting additional settings

Switching the safety lock function / on

When the safety lock function is switched on, it protects the refrigeration appliance from being switched off or adjusted unintentionally by unauthorized persons, e.g., children.

- Tap .
- Swipe left or right until  is shown in the middle.
- Tap .

When the safety lock function is switched on,  will light up orange.

- Close the appliance door. Only then will the safety lock function  be active.

Deactivating the safety lock function / temporarily

If you want to adjust the temperature, for example, you can deactivate the safety lock function temporarily:

- Touch the temperature display.
- Touch  for approx. 6 seconds.

The display switches to the temperature controls.

- Now select the required settings.

Closing the appliance door will reactivate the safety lock function .

Switching the safety lock function / off completely

- Tap .
- Touch  for approx. 6 seconds.
- Swipe left or right until  is shown in the middle.
- Tap .

When the safety lock function is switched off,  will light up.

Sabbath mode

The appliance features a Sabbath mode for the purposes of religious observance.

If Sabbath mode  is switched on, this will be indicated on the status display.

The display switches off after 3 seconds.

When Sabbath mode  is switched on, you cannot make any settings on your refrigeration appliance.

Ensure that the appliance door is properly closed, as visual and audible alarms are switched off.

The Sabbath mode function  will switch off automatically after approx. 120 hours.

When Sabbath mode  is switched on, the following are deactivated:

- the interior lighting when the appliance door is opened
- all audible and visual signals
- the temperature display

All other functions switched on previously remain activated.

 Health risk caused by contaminated food.

As power failures are not indicated while Sabbath mode  is active, food may be exposed to increased temperatures for a certain period of time. This will reduce the storage life of the food.

If there is a power failure during Sabbath mode , check the quality of the food.

Selecting additional settings

Switching Sabbath mode off

- Tap the black display.
-  will appear on the display.
- Tap .
-  lights up orange.
- Tap the  symbol again.

When Sabbath mode is switched off, the  symbol will light up white.

Changing the time before the door alarm is triggered

You can set how quickly the door alarm should sound after an appliance door has been opened.

- Tap .
- Swipe left or right until  is shown in the middle.
- Tap .
- Swipe left or right until the time you want between 30 seconds and 3 minutes 30 seconds is shown in the middle.
- Tap on the setting you want to confirm.

Selecting additional settings

Miele@home

Your refrigeration appliance is equipped with an integrated WiFi module.

Networking is deactivated at the factory.

To use this feature, you will need:

- a WiFi network
- the Miele app
- a Miele user account You can create a user account via the Miele app.

The Miele app will guide you as you connect your refrigeration appliance to your home WiFi network.

Once the refrigeration appliance is connected to your WiFi network, you can use the app to carry out the following activities, for example:

- Call up information on the operating status of your refrigeration appliance.
- Change the settings on your refrigeration appliance.

Connecting your refrigeration appliance to your WiFi network will increase energy consumption, even when the appliance is switched off.

Make sure that the signal of your WiFi network is sufficiently strong in the place where you want to set up your refrigeration appliance.

Availability of the Wi-Fi connection

The Wi-Fi connection shares a frequency range with other appliances (including microwave ovens and remote control toys). This can cause sporadic or even complete connection failures. Therefore, the availability of featured functions cannot be guaranteed.

Miele@home availability

The ability to use the Miele app depends on the availability of the Miele@home service in your country.

The Miele@home service is not available in every country.

For information about availability, please visit www.miele.com.

Miele App

The Miele App is available to download free of charge from the Apple App Store® or from the Google Play Store™.

Selecting additional settings

Setting up Miele@home for the first time

- Tap .
- Swipe left or right until @ is shown in the middle.
- Tap @.
- Tap on the connection method you wish to use (app or WPS).

After you have successfully logged in,  will appear on the status display.

If a connection could not be created,  will appear.

- In this case, start the process again.

Deactivating or activating the WiFi connection

- Tap .
 - Swipe left or right until @ is shown in the middle.
 - Tap @.
 - Tap  to deactivate the WiFi connection.
-  will appear on the display.
- Tap  to reactivate the WiFi connection.
 - Tap  to exit the menu level.

When the WiFi connection is active,  will light up on the status display.

Resetting the network configuration

- Tap .
- Swipe left or right until @ is shown in the middle.
- Tap @.
- Swipe right until  is shown in the middle.
- Tap .
- Tap OK.

All entered settings and values for Miele@home are reset to the default settings.

The WiFi connection has been deactivated.  will go out on the status display.

Reset the network configuration if you are disposing of or selling your refrigeration appliance, or if you are putting a used refrigeration appliance into operation. All personal data is removed from the refrigeration appliance. This will also ensure that a previous owner is no longer able to access the refrigeration appliance.

Selecting additional settings

Changing the volume of the alarms and audible signals /

You can change the volume of the alarms and audible signals (e.g., in the event of a door alarm or a fault message). Alternatively, you can switch the alarms and audible signals off if you find them annoying.

- Tap .
- Swipe left or right until  is shown in the middle.
- Tap .
- Swipe left or right until the volume you want is shown in the middle.
- Confirm the volume you want by tapping on the segment bar.

When the alarms and audible signals are switched off,  will appear.

Adjusting the display brightness

You can adjust the display brightness to the lighting conditions in the room.

- Tap .
- Swipe left or right until  is shown in the middle.
- Tap .
- Swipe left or right until the brightness you want is shown in the middle.
- Confirm the brightness you want by tapping on the segment bar.

Switching off Demo mode

Demo mode  allows the refrigeration appliance to be presented in the showroom without the cooling system being switched on. Do not activate this setting for domestic use.

If Demo mode has been switched on as a default setting,  will show on the status display.

- Tap .
- Tap .
- Swipe left or right until  is shown in the middle.
- Tap .

After Demo mode  has been switched off, the refrigeration appliance shuts down and must be switched on again.

Resetting the settings to their default settings

All settings made on the refrigeration appliance will be reset to default settings (for settings; see “Guide to the appliance”).

- Tap .
- Swipe left or right until  is shown in the middle.
- Tap .
-  will appear on the display.
- Touch OK.

The refrigeration appliance shuts down and must be switched on again.

Selecting additional settings

Information

Appliance data (model identifier and serial number) is shown on the display.

Keep this appliance data to hand; you will need it:

- When integrating the refrigeration appliance into your WiFi network (see “Selecting additional settings – Miele@home”).
- When reporting an appliance fault to Miele Customer Service (see “Service”).
- When retrieving information from the EPREL database (see “Service”).

Carbon-filter change indicator

After inserting the carbon filter (optional accessory), you must activate the carbon-filter change indicator  in Settings mode .

The carbon-filter change indicator  on the status display will remind you to replace the carbon filter approx. every 6 months (see “Cleaning and care – Replacing the carbon filters”).

Cleaning mode

Cleaning mode  makes it easier to clean the refrigerator section (see “Cleaning and care”). The interior lighting remains switched on, even though the refrigerator section is switched off. The audible signal will stop and the symbols on the display will also go out. If Cleaning mode  is switched on, this will be indicated on the status display.

After cleaning, Cleaning mode  must be switched off. If the appliance door is closed for more than 10 minutes, Cleaning mode  switches itself off automatically.

Door alarm

The refrigeration appliance is equipped with a warning system to avoid increased energy consumption and food becoming warm if the appliance door is left open.

If the appliance door is left open for a longer period of time,  will light up yellow in the temperature display. An alarm will also sound.

You can change the time before the door alarm is triggered. However, the door alarm can also be turned off (see “Selecting additional settings”).

The alarm will stop and  will go out on the display as soon as the door is closed.

Turning the door alarm off early

If the alarm disturbs you, it can be turned off early.

■ Touch  in the display.

The alarm will stop and the  symbol will go out.

If the appliance door is not closed, the alarm will sound again after 3 minutes.

Storing food in the fridge zone

 Risk of explosion due to flammable mixes of gases. Electrical components can cause flammable mixes of gases to ignite. Do not store any explosive materials or products containing flammable propellants (e.g., spray cans) in the appliance. The spray cans in question can be identified by the contents printed on the can or by a flame symbol. Electrical components can cause escaping gases to ignite.

 Risk of damage due to greasy or oily foods. If storing food which contains a lot of fat or oil in the refrigeration appliance or the appliance door, make sure that it does not come into contact with plastic components as this could cause stress cracks or break the plastic. Make sure that no fat or oil leaks onto the plastic parts of the refrigeration appliance.

If there is insufficient air circulation, the cooling performance will decrease and energy consumption will increase. To allow air to circulate efficiently, do not pack food too closely together in the appliance. Do not cover the fan in the rear wall of the appliance.

Different storage zones

Due to natural air circulation, there are different temperature zones in the refrigerator section.

Cold, heavy air sinks to the lowest section of the refrigeration section. Make use of the different zones when placing food in the appliance.

This appliance has DynamicCooling, which helps to keep an even temperature when the fan is running. When DynamicCooling is turned on, the difference between the various zones is less pronounced.

Warmest area

The warmest area in the refrigerator section is in the top section of the door. Use this for storing butter so that it remains spreadable and cheese so that it retains its flavor.

Storing food in the fridge zone

Coldest area

The coldest area in the fridge zone is directly above the PerfectFresh Active zone dividing plate and at the back of the appliance. The temperature in the PerfectFresh Active zone compartments is even colder.

A temperature setting of 39°F (4°C) combined with appropriate hygiene measures delays the growth of bacteria, e.g., salmonella and listeria, which can lead to serious food poisoning.

Therefore, you should use these areas in the fridge zone and in the Perfect-Fresh Active zone to store all delicate and highly perishable food, including:

- fish, meat, poultry
- cold cuts, ready-made meals
- dishes or baked goods containing eggs or cream
- fresh dough, cake mixtures, pizza dough, or pie dough
- raw-milk cheese and other raw-milk products
- pre-packed vegetables
- other fresh food (with a label stating it should be kept at a temperature of approx. 39°F (4°C))

Food which is not suitable for storage in the fridge zone

Not all food is suitable for refrigeration at temperatures below 40°F (5°C) because it is sensitive to cold.

Foods which are sensitive to cold include:

- pineapples, avocados, bananas, pomegranates, mangoes, melons, papayas, passion fruit, citrus fruits such as lemons, oranges, mandarins, grapefruits
- fruit (which is not yet ripe)
- eggplant, cucumbers, potatoes, peppers, tomatoes, zucchini
- hard cheeses (e.g., Parmesan)

Notes on buying food

The freshness of the food when it is first placed in the appliance is the most important factor for how long it stays fresh.

Take into account the use-by date and the correct storage temperature.

Time out of the fridge, e.g., transporting food in a warm car, should be kept to a minimum.

Storing food correctly

Ensure that food stored in the fridge zone is in packaging or covered properly (some exceptions apply in the Perfect-Fresh Active zone).

This will prevent food odors from affecting other food, stop food from drying out, and also prevent any cross-contamination of bacteria. This is particularly important when storing meat products. Make sure that food such as raw meat and fish in particular does not come into contact with other food.

By ensuring that the temperature settings are correct and by taking appropriate hygiene measures, you can prolong the storage life of your food considerably. This prevents food waste.

Storing food in the PerfectFresh Active zone

PerfectFresh Active zone

The PerfectFresh Active zone satisfies the requirements of a chill compartment to DIN EN 62552:2020.

The PerfectFresh Active zone provides ideal storage conditions for fruit, vegetables, fish, meat, and dairy products. Food stays fresh considerably longer while retaining both flavor and vitamins.

The temperature in the PerfectFresh Active zone is controlled automatically and maintained at 32 to 37°F (0 to 3°C).

While lower than the temperature in a standard refrigerator section, this is the optimum temperature range for storing fresh food which is not sensitive to cold.

The humidity level in the PerfectFresh Active zone can also be regulated to suit the food being stored. If the humidifier  is switched on, water vapor is supplied to the stored fruit and vegetables. The humidifier  switches on approximately every 90 minutes and each time the appliance door is opened. Food retains its own moisture if stored at a higher humidity and so does not dry out as quickly.

Remember that the fresher the food when it is placed in the appliance, the longer it will stay fresh.

Take food out of the PerfectFresh Active zone approx. 30 to 60 minutes before using it. The aroma and taste do not fully develop until the food has reached room temperature.

Humidity-controlled compartment

The upper **humidity-controlled compartment** has a temperature of 32 to 37°F (0 to 3°C), and the humidity level is increased depending on the position of the compartment lid: δ not increased or $\delta\delta\delta$ increased.

Low humidity δ

When the δ setting is used, the humidity-controlled compartment becomes a dry compartment (see “Dry compartment”).

Increased humidity $\delta\delta\delta$

When this setting is used, the compartment is suitable for storing fruit and vegetables.

Increased moisture in the humidity-controlled compartment can cause a build-up of condensate.

If you find that too much condensate has formed and this is affecting the food, proceed as follows:

Wipe off any condensate with a cloth.

Open the compartment lid by moving it to the low humidity δ position.

Switch the humidifier  off.

Storing food in the PerfectFresh Active zone

Selecting increased humidity ∆∆∆

When the ∆∆∆ setting is used, the humidifier ☁ should be switched on.

The energy consumption does increase slightly when the humidifier ☁ is switched on. The appliance may also make more noise than usual.

- Tap ⚙.
- Swipe left or right until ☁ is shown in the middle.
- Tap ☁.
- Swipe left until the humidifier intensity you want (1: low humidity; 3: maximum humidity) is shown in the middle.
- Tap the setting you want to confirm.

The ☁ symbol lights up orange.

- Open the drawer of the humidity-controlled compartment.

- Slide the compartment lid backward as far as it will go.

The compartment lid is closed and the humidity remains in the compartment ∆∆∆.

Selecting low humidity ∆

When the ∆ setting is used, the humidifier ☁ should be switched off.

- Tap ⚙.
- Swipe left or right until ☁ is shown in the middle.
- Tap ☁.
- Swipe right and tap ⏻.

The ☁ symbol lights up white.

- Open the drawer of the humidity-controlled compartment.

- Pull the compartment lid forward as far as it will go.

The compartment lid is open and the humidity drops ∆.

If the food is higher than the edge of the drawer, pushing in the drawer may alter the position of the compartment lid, causing it to close. When filling the drawer, take care to ensure that the food does not touch the compartment lid.

Storing food in the PerfectFresh Active zone

Humidifier

When the humidifier  is switched on, water vapor is supplied to the fruit and vegetables stored in the humidity-controlled compartment each time the appliance door is opened and approximately every 90 minutes. The water vapor provides additional humidity in the humidity-controlled compartment.

The humidifier and its water container are located in the dividing plate between the refrigerator section and Perfect-Fresh Active zone.

Check and pay attention to the following before switching the humidifier on (see “Selecting additional settings”):

- The water container must have been cleaned, filled with water, and inserted securely.
- The lid for the humidity-controlled compartment must be closed (∞∞∞ setting).

The water in the water container should last for approx. 4 months.

The water container will only need to be refilled if the humidifier is no longer producing any water vapor.

 Risk of damage due to incorrectly filled water container.

Liquids containing sugar can damage the humidifier.

Use only fresh drinking water to fill the water container.

 Risk to health due to contaminated water.

Using contaminated water can lead to poisoning.

Use only fresh drinking water to fill the water container.

 Risk to health due to contaminated water.

Bacteria can develop in water which has been sitting in the water container for too long. This poses a risk to your health.

Clean the water container for the humidifier and fill it with fresh drinking water if the refrigeration appliance, the refrigerator section, or the humidifier has been switched off for an extended period of time (more than 2 days).

Clean the water container for the humidifier and fill it with fresh drinking water if Vacation mode  has been switched on for an extended period of time (more than 2 weeks).

Storing food in the PerfectFresh Active zone

Filling the water container for the humidifier

- Press on the outer corners at the back of the glass shelf ①.

The glass shelf will lift up at the front.

- Lift up the shelf and fold it back.

The glass shelf will stand upright.

- Push the slider ② to the left.

The water container ③ will spring out of the recess.

- Remove the water container and fill it up to the marker with drinking water.
- Reinsert the water container.
- Fold the glass shelf ① back down.

Dry compartment

The lower **dry compartment** has a temperature of 32 to 37°F (0 to 3°C) and the humidity is not increased Δ.

The dry compartment is suitable for storing perishable foods such as:

- fresh fish and shellfish
- meat, poultry, and sausage
- deli salads
- dairy products such as yogurt, cheese, cream, etc.
- Any type of food can in fact be stored in this compartment, as long as it is packaged.

Please note that foods rich in protein deteriorate faster than others. Shellfish, for example, deteriorates faster than fish, and fish deteriorates faster than meat.

Always keep these foods **covered or wrapped**.

Storing food in the PerfectFresh Active zone

Observe the following tips if you find that food you have stored does not keep well (e.g., food becomes limp or wilts after only being stored for a short time):

- Only place fresh food in the appliance as the initial condition of the food is crucial to maintaining freshness.
- Clean the compartments in the PerfectFresh Active zone before storing food in them.
- Very wet food should be dried off before storing it.
- Do not store food which is sensitive to cold in the PerfectFresh Active zone (see “Storing food in the refrigerator section – Food which is not suitable for storage in the refrigerator section”).
- Select the correct PerfectFresh Active compartment for the food as well as the correct position for the compartment lid (low humidity δ or humidity increased $\delta\delta\delta$).
- An increased humidity level $\delta\delta\delta$ in the humidity-controlled compartment is achieved with the moisture present in the food being stored if the food is stored unwrapped. The more food stored in the compartment, the higher the humidity.
- Do not overfill the compartments.
- If you find that too much condensate has formed when using the $\delta\delta\delta$ setting and this is affecting the food:
 - Wipe off any condensate with a cloth.
 - Place a rack or similar item in the compartment so that excess moisture can drain away.
 - Open the compartment lid by moving it to the low humidity δ position and switch the humidifier  off.
- If the humidity level is too low despite the $\delta\delta\delta$ setting, wrap the food in airtight packaging.
- If you think that the temperature in the PerfectFresh Active zone is too high or too low, try regulating it slightly first by changing the temperature in the refrigerator section by 1 or 2°F. If ice crystals start to form on the floor of the PerfectFresh Active compartments, increase the temperature as otherwise the cold temperature will damage the food.
- If adjusting the temperature in the refrigerator section does not remedy the problem, adjust the temperature in the PerfectFresh Active zone (see “The correct temperature”).

 **WARNING! DANGER** of injury and damage!

Do not use any mechanical or other types of aids which are not recommended by the manufacturer to accelerate the defrosting process.

Refrigerator section and PerfectFresh Active zone

The refrigerator section and the PerfectFresh Active zone defrost automatically.

The condensate drains through a channel and drain hole into an evaporation system at the back of the refrigeration appliance. The warmth generated by the compressor causes the condensate to evaporate automatically.

Keep the condensate channel and drain hole clean to enable this. The condensate must always be able to drain properly.

Cleaning and care

 **WARNING! DANGER** of electric shock!
Unplug the appliance or trip the circuit breaker.

 **WARNING! Fire hazard!**
Do not damage the coolant pipework.

The data plate located inside the interior cabinet of the refrigeration appliance must not be removed. It contains information which is required in the event of a service call.

Do not let water get into the electronic or the lighting.

 Risk of damage due to moisture penetration.
The steam from a steam cleaner can damage plastic and electrical components.
Do not use a steam cleaner to clean the refrigeration appliance.

Cleaning water must not get into the drain hole.

Cleaning agents

Cleaning and care products used in the interior cabinet of the refrigeration appliance must be food safe.

To avoid damaging the surfaces of your appliance, **do not** use the following:

- cleaning agents containing soda, ammonia, acids, or chloride
- cleaning agents containing limescale remover
- abrasive cleaning agents, such as scouring powder, scouring liquid, or pumice stones
- cleaning agents containing solvents
- stainless steel cleaners
- dishwasher cleaning agents
- oven sprays
- glass cleaners
- hard, abrasive sponges and brushes, such as pot scrubbers
- eraser sponges
- sharp metal scrapers

We recommend using a clean sponge, lukewarm water with a little liquid dish soap to clean the surfaces of the appliance.

Preparing the refrigeration appliance for cleaning

Tip: Switch Cleaning mode  on. The cooling system in the refrigerator section is switched off, but the interior lighting remains switched on.

- Tap .
- Swipe left or right until  is shown in the middle.
- Tap .
- To leave this Settings level, tap .

If Cleaning mode  is switched on, this will be indicated on the status display.

- Take any food out of the appliance and store it in a cool place.
- Take out any removable accessories for cleaning (see “Removing, dismantling, and cleaning accessories”).

Cleaning the interior of the appliance

Clean the appliance regularly, or at least once a month.

If soiling is left on for any length of time, it may become impossible to remove under certain circumstances. Surfaces may become discolored or damaged.

It is therefore best to remove any soiling immediately.

- Clean the **interior** with a clean sponge, lukewarm water, and a little liquid dish soap.
- After cleaning, wipe with clean water and dry with a soft cloth.
- Clean the condensate channel and drain hole frequently using a cotton swab or similar item to ensure that condensate can drain away freely.
- Leave the door open to air the refrigeration appliance sufficiently for a short while and to prevent odor build-up.

Cleaning and care

Cleaning accessories by hand or in the dishwasher

The following components must be cleaned **by hand** only:

- the stainless steel trims or strips
- Flexible bottle rack
- door shelf with fine adjustment
- the plastic parts of the adjustable shelf with pivotable glass shelf (Flexi-Tray)
- the rear protective strip and the side supports of the storage drawer (CompactCase)
- adjustable shelf with printing
- the dividing plate and bottle rack
- all drawers and compartment lids (these vary depending on model)
- the organization box

The following components are **dishwasher-safe**:

⚠ Risk of damage due to high dishwasher temperatures.

Parts of the refrigeration appliance may become unusable, e.g., deform, if they are washed in the dishwasher at more than 130°F (55°C).

For dishwasher-safe components, always select dishwasher programs with a maximum temperature of 130°F (55°C).

Contact with natural dyes from carrots, tomatoes, and ketchup, etc., may discolor the plastic parts in the dishwasher. This discoloration does not affect the stability of the parts.

- bottle holder, egg tray

- shelves and bottle shelves in the appliance door (without stainless steel trim)
- door shelf with fine adjustment
- the adjustable shelves (without the strips or printing)
- the 2 pieces that make up the water container for the humidifier
- the adapters for the baking tray
- the holder for the carbon filter (available as an optional accessory)

Removing, dismantling, and cleaning accessories

Removing the door shelf with fine adjustment

- Hold the door shelf in both hands, press the gray buttons on both sides under it, and slide it up off the guide rails.
- Remove the guide rail from the lugs.
- Once you have cleaned it, move the guide rail to the desired position and place the second guide rail parallel to the first rail on the opposite side.
- Push the shelf back down onto the guide rails.

Dismantling the door shelf/bottle shelf

Remove the stainless steel trim before cleaning the door shelf/bottle rack in a dishwasher.

To remove the stainless steel trim, proceed as follows:

- Place the door shelf/bottle rack on the countertop.

- Press the retainer out of the recess. The entire section of stainless steel trim will now come off the shelf.
- After cleaning, reattach the stainless steel trim to the shelf by following the same procedure in reverse.

Dismantling the adjustable shelf/adjustable shelf with lighting

⚠ Risk of damage as a result of incorrect cleaning.

The stainless steel trim with LED lighting will be damaged if you place it in water for cleaning.

Clean the stainless steel trim with LED lighting with a damp cloth.

Remove the stainless steel trim or stainless steel trim with LED lighting before cleaning the adjustable shelf.

- Place the adjustable shelf on a soft surface (e.g., a dish towel) with the top side facing downward.

⚠ Risk of damage as a result of incorrect handling.

When you remove the stainless steel trim with LED lighting, the metal contacts can be damaged.

These contacts in the front left corner supply power to the LED lighting. Ensure that you always loosen the other side from the contacts (metal discs) first.

Cleaning and care

- Grasp the plastic surround on the left-hand side of the stainless steel trim at its rearmost point.
 1. Pull the plastic surround from the adjustable shelf and
 2. pull the trim off at the same time. Then do the same on the opposite side.
- After cleaning, reattach the stainless steel trim by following the same procedure in reverse.

Dismantling the adjustable shelf with pivotable glass shelf (FlexiTray)

⚠ Danger of injury from dropping the glass shelf.

The pivotable glass shelf can come out when removing the adjustable shelf, causing the glass shelf to drop out of the tray and break.

Keep hold of the pivotable glass shelf when removing the adjustable shelf.

- Place the adjustable shelf with pivotable glass shelf on a countertop covered with a soft material (e.g., a dish towel).

- Bring the tray to the front. Use the opening to lift the glass shelf from underneath and remove it.
- Move the tray back to its original position resting on the adjustable shelf.

The tray can only be detached from the adjustable shelf once it has been returned to its original position and is resting on the adjustable shelf. The fastener must be sitting in the circular recess at the end of the runner guide ①.

- Take a firm hold of the top right of the bottom adjustable shelf and pull the tray firmly off the adjustable shelf.

The fastener on the tray comes loose from the circular recess at the end of the runner guide ①.

You can now dismantle all the parts and clean them.

Underneath the plastic shelf, there is a glass shelf which is held in place with retainers ② on the outer edge of the adjustable shelf.

The glass shelf can also be removed for cleaning as described below:

- Move the shelf so that the stainless steel trim is at the back and the front edge hangs over the countertop slightly.

- Release the retainers ② and lift the shelf up.

The glass shelf comes loose. Both parts can now be cleaned.

Assembling the adjustable shelf with pivotable glass shelf (FlexiTray)

- Put the plastic adjustable shelf down on the countertop so that the recess is at the top and the stainless steel trim is at the front.

- Place the glass shelf in the grooves ③ and then secure it in the retainers ②.
- Turn over the shelf so that the plastic surface is facing upward.

Cleaning and care

- Place the frame on the adjustable shelf so that the arrows on the adjustable shelf line up with the recesses on the frame.

- Take hold of the tray with the fastener facing downward and push the fastener firmly into the circular recess at the end of the runner guide ①.
- Place the glass shelf in the tray.

Removing and dismantling the storage drawer (CompactCase)

- Pull the drawer out as far as it will go. Tilt the drawer up slightly and remove the drawer.

- Use both hands to slightly lift the shelf including the holder at the front 1.).
- Pull the shelf forward slightly 2.) and lift it out either up or at an angle to remove it, making sure that the notches on the left and right are in line with the shelf supports.
- Place the shelf and support on a worktop covered with a soft material (e.g., a dish towel).

Removing the drawers from the refrigerator section

- Pull the drawer out as far as it will go.
- Holding the sides of the drawer at the back, lift it up and then forward and out.

Push the telescopic runners back in again to avoid damaging them.

⚠ Risk of damage as a result of incorrect cleaning.

The telescopic runners contain a special lubricant which can be washed out during cleaning, damaging the rails.

Wipe the telescopic runners with a damp cloth to clean them.

- Pull off the supports from the sides of the shelf 1.).
- Pull off the stainless steel trim at the front 2.).
- Pull off the rear protective strip 3.).
- After cleaning the shelf, reattach the stainless steel trim, the protective strip, and the supports.
- Insert the shelf together with the support into the refrigerator either from above or from the side.
- Push the shelf back as far as it will go.
- Insert the drawer from above into the upper or lower guide in the holder as required.

Replacing the drawers

- Place the drawer on the fully retracted telescopic runners.
- Push the drawer into the refrigeration appliance until it clicks into position.

Cleaning and care

Removing and dismantling the water container for the humidifier

 Risk to health due to contaminated water.

Bacteria can develop in water which has been sitting in the water container for too long. This poses a risk to your health.

Clean the water container for the humidifier and fill it with fresh drinking water if the refrigeration appliance, the refrigerator section, or the humidifier has been switched off for an extended period of time (more than 2 days).

Clean the water container for the humidifier and fill it with fresh drinking water if Vacation mode  has been switched on for an extended period of time (more than 2 weeks).

- Separate the water container into its 2 pieces and clean them by hand or in the dishwasher.
- Reinsert the water container.
- Fold the glass shelf ① back down.

- Press on the outer corners at the back of the glass shelf ①.

The glass shelf will lift up at the front.

- Lift up the shelf and fold it back.

The glass shelf will stand upright.

- Push the slider ② to the left.

The water container ③ will spring out of the recess.

- Remove the water container.

Removing the dividing plate and bottle rack

- Remove the glass shelves at the front and back of the dividing plate.

- Lift the bottle rack at the front and pull it out.
- After cleaning, slide the bottle rack all the way in and push it down.
- Place the glass shelves back on the dividing plate.

Removing the compartment lid

- Lift the lid at the front and pull it out.
- After cleaning, slide the compartment lid back in again.

Replacing the carbon filters (optional accessories)

Replace the carbon filters in the holder around every 6 months.

The  symbol on the status display reminds you that the carbon filter needs to be changed.

Replacement KKF-RF carbon filters can be obtained from Miele Customer Service, or from the Miele webshop.

- Pull the carbon filter holder upward to remove it from the adjustable shelf.

- Remove both carbon filters and place the new filters with the surrounding edge pointing downward in the holder.

- Place the holder in the middle of the protective strip at the back of the adjustable shelf so that it clicks into position.

Cleaning and care

- Touch the  symbol on the display to confirm that the filters have been replaced.

The “Replace carbon filter” reminder will go out on the display and the counter will be reset.

The  symbol will go out on the status display.

Cleaning the door seal

 Risk of damage as a result of incorrect cleaning.

If you treat the door seal with oils or grease, it can become porous.

Do not use any oils or grease on the door seal.

- The door seals should be cleaned regularly with clean water, and then wiped dry with a soft cloth.

Cleaning the ventilation gaps

A build-up of dust will increase the energy consumption of the appliance.

- The ventilation gaps should be cleaned on a regular basis with a brush or vacuum cleaner (you could use a Miele Vacuum Cleaner dust brush, for example).

After cleaning

- Switch the Cleaning mode function off again by tapping  on the status display.

- Tap  again.

When Cleaning mode is switched off, the  symbol will light up white.

The refrigeration appliance will start cooling again.

- Place all shelves and accessories back in the appliance.
- Switch on the Automatic Super-Cool  function for a while so that the temperature inside the refrigeration appliance will drop quickly.
- Place food in the refrigeration appliance as soon as it reaches the required coldness.
- Close the appliance door(s).

Frequently asked questions

Many malfunctions and faults that can occur in daily operation can be easily remedied. You can save time and money in many cases, as you do not need to contact Miele Customer Service.

Information to help you rectify faults yourself can be found at www.miele.com/service.

The following tables are designed to help you to find the cause of a malfunction or a fault and to resolve it.

To prevent cold from escaping, open the appliance doors as little as possible until the fault has been corrected.

Problem	Possible cause and solution
<p>The refrigeration appliance is not getting cold and the interior lighting does not come on when the appliance door is opened.</p>	<p>The refrigeration appliance is not switched on and the  symbol is lit up on the display.</p> <ul style="list-style-type: none"> ■ Turn the refrigeration appliance on.
	<p>The electrical plug is not properly plugged into the socket.</p> <ul style="list-style-type: none"> ■ Insert the electrical plug into the socket. If the refrigeration appliance is switched off,  will appear on the display.
	<p>The fuse has tripped. There could be a fault with the appliance, the household electrical wiring, or another appliance.</p> <ul style="list-style-type: none"> ■ Contact a qualified electrician or Miele Customer Service.
<p>The compressor runs continuously.</p>	<p>Not a fault. To save energy, the compressor runs at a lower speed when less cooling is required. This increases the compressor run time.</p>
<p>The compressor is turning on more frequently and for longer periods of time; the temperature in the refrigeration appliance is too low.</p>	<p>The ventilation gaps are obstructed or dusty.</p> <ul style="list-style-type: none"> ■ Do not block the ventilation gaps. ■ Clean the ventilation gaps on a regular basis to remove any dust.
	<p>The appliance door has been opened too frequently, or a large amount of fresh food has been placed in the appliance.</p> <ul style="list-style-type: none"> ■ Only open the appliance door when necessary and for as short a time as possible. <p>After a while, the temperature will return to normal by itself.</p>
	<p>The appliance door is not properly closed.</p>

Frequently asked questions

Problem	Possible cause and solution
	<p>■ Close the appliance door. After a while, the temperature will return to normal by itself.</p> <p>The ambient temperature is too high. The higher the ambient temperature, the longer the compressor runs. ■ See the information in the section on “Installation – Installation location”.</p> <p>The appliance was not properly installed in the niche. ■ Install the refrigeration appliance in the niche as described in the installation instructions supplied with it.</p> <p>The temperature setting in the refrigeration appliance is too low. ■ Correct the temperature setting.</p> <p>The Automatic SuperCool ❄️ function is still turned on. ■ Switch off the Automatic SuperCool function ❄️ earlier to save energy.</p>
<p>The compressor comes on less and less often and for shorter periods of time. The temperature in the appliance rises.</p>	<p>This is not a fault. The temperature is too high. ■ Correct the temperature setting. ■ Check the temperature again after 24 hours.</p>
<p>Ice or condensation has built up inside the refrigeration appliance. The appliance door may not close correctly.</p>	<p>The door seal has come out of its groove. ■ Check that the door seal is correctly positioned in the groove.</p> <p>The door seal is damaged. ■ Check whether the door seal is damaged.</p>
<p>The door seal is damaged or needs to be replaced.</p>	<p>No tools are required to change the door seal. ■ Change the door seal. A replacement is available from Technical Service.</p>

Other problems

Problem	Possible cause and solution
The floor of the refrigerator section is wet.	The drain hole is blocked. <ul style="list-style-type: none"> ■ Clean the condensate channel and the drain hole.
An alarm does not sound even though the appliance door has been open for a long time.	This is not a fault. The alarm has been switched off in Settings mode. If you want to switch the acoustic alarm back on again: <ul style="list-style-type: none"> ■ Tap . ■ Swipe left or right until  is shown in the middle. ■ Tap . ■ Swipe left or right until the volume you want is shown in the middle. ■ Confirm the volume you want by tapping on the segment bar. <p>When the alarms and audible signals are switched on,  will appear.</p>

Messages in the display

Message	Possible cause and solution
<ul style="list-style-type: none"> ■ lights up on the status display, the refrigeration appliance does not get cold even though the controls and the interior lighting are working. 	<p>Demo mode has been activated.</p> <ul style="list-style-type: none"> ■ Tap . ■ Tap . ■ Swipe left or right until ■ is shown in the middle. ■ Tap ■. <p>After Demo mode ■ has been switched off, the refrigeration appliance shuts down and must be switched on again.</p>
<ul style="list-style-type: none">  is lit up on the display and the appliance cannot be used. 	<p>The Cleaning mode function is still switched on.</p> <ul style="list-style-type: none"> ■ Switch the Cleaning mode function off again by tapping on  on the status display. ■ Tap  again. <p>When Cleaning mode is switched off, the  symbol will light up white.</p> <p>The refrigeration appliance will start cooling again.</p>

Frequently asked questions

Message	Possible cause and solution
<p>Nothing is visible on the display. The display is completely blank.</p>	<p>Sabbath mode  is switched on: the interior lighting is switched off and the appliance is cooling down.</p> <ul style="list-style-type: none"> ■ Tap on the black display. <p> will appear on the display.</p> <ul style="list-style-type: none"> ■ Tap . <p> lights up orange.</p> <p>When Sabbath mode is switched off, the  symbol will light up white.</p>
<p> is lit up on the display and the appliance cannot be used.</p>	<p>The safety lock function has been activated.</p> <ul style="list-style-type: none"> ■ Unlock the refrigeration appliance temporarily or switch the safety lock function off completely (see “Selecting additional settings – Deactivating the safety lock function / temporarily/switching off completely”).
<p>The  symbol lights up on the status display and an audible signal also sounds.</p>	<p>The carbon-filter change indicator  reminds you that the carbon filter needs to be changed.</p> <ul style="list-style-type: none"> ■ Replace the carbon filter in the holder (see “Cleaning and care – Replacing the carbon filters (optional accessories)”) and touch the  symbol on the display to confirm that you have changed the carbon filter. <p>The  symbol will go out on the status display.</p>
<p> lights up yellow on the display and an alarm also sounds.</p>	<p>The door alarm has been activated.</p> <ul style="list-style-type: none"> ■ Touch and hold  in the display for a few seconds. <p>The alarm will stop and the  symbol will go out.</p> <ul style="list-style-type: none"> ■ Close the appliance door.

Frequently asked questions

Message	Possible cause and solution
 lights up red in the display and a fault code F with numbers may appear. An alarm will also sound.	<p>There is a fault.</p> <ul style="list-style-type: none"> ■ Tap  on the display to switch the alarm off. ■ Contact Miele Customer Service. <p>To report the fault, you need the fault code and also the model identifier and serial number of your refrigeration appliance. You can access this information on the display.</p> <ul style="list-style-type: none"> ■ To do this, touch  on the display. <p>The appliance data required will be shown on the display.</p> <p>Confirm with <i>OK</i> to exit the information display and the fault code will be shown again on the display.</p> <p>The refrigeration appliance can be switched off directly from the fault-message display.</p>
	<p>There is an appliance fault: this display always has priority over any settings which have just been selected.</p> <p>An appliance fault has priority over any current door and/or temperature alarms displayed.</p>

Problems with the humidifier

Problem	Possible cause and solution
The humidifier is not supplying moisture to the food in the Perfect-Fresh Active zone.	<p>The humidifier is not switched on.</p> <ul style="list-style-type: none"> ■ Tap on the  symbol in Settings mode .
	<p>The compartment lid has been pulled forwards to the “Low humidity δ” setting.</p> <ul style="list-style-type: none"> ■ Push the compartment lid backward so that the “Increased humidity $\delta\delta\delta$” setting is selected.
	<p>There is not enough water in the water container.</p> <ul style="list-style-type: none"> ■ Fill the water container with fresh drinking water.
	<p>The water container is not installed correctly.</p> <ul style="list-style-type: none"> ■ Insert the water container, making sure it clicks into position correctly.
	<p>There is dirt in front of the humidifier.</p> <ul style="list-style-type: none"> ■ Clean the humidifier and water container.

Frequently asked questions

Interior lighting

Problem	Possible cause and solution
 Risk of electric shock due to exposed, live electrical components. When removing the lighting cover, there is a risk of coming into contact with live electrical components. Do not remove the lighting cover. The LED lighting may only be repaired or replaced by Customer Service.	

 Risk of injury from LED lighting. This lighting corresponds to risk group RG 2. If the cover is defective, there is a risk of eye injury. If the lighting cover is defective, do not look from a close range directly into the lighting with optical instruments (e.g., magnifying glass or similar).	
--	--

Problem	Possible cause and solution
The interior lighting is not working.	The refrigeration appliance has not been turned on. ■ Turn the refrigeration appliance on.
	Sabbath mode  is switched on: the display is dark and the refrigeration appliance is cooling. ■ Tap on the black display.  will appear on the display. ■ Tap  .  lights up orange. ■ Tap on the  symbol in Settings mode  . When Sabbath mode is switched off, the  symbol will light up white.
	To avoid overheating, the interior lighting switches itself off automatically after approximately 15 minutes if the appliance door is left open. If this is not the cause, there is a fault. ■ Contact Miele Customer Service.

Frequently asked questions

Problem	Possible cause and solution
<p>The LED lighting on one of the adjustable shelves is not working.</p>	<p>The shelf is not sitting correctly on the shelf supports.</p> <ul style="list-style-type: none"> ■ Check that the shelf is positioned correctly on the shelf supports. The shelf has metal contacts at the front left corner which supply power to the LED lighting. ■ Push in the shelf until it clicks into position.
	<p>The LED lighting on the stainless steel trim is faulty.</p> <ul style="list-style-type: none"> ■ Replace the stainless steel trim with LED lighting. A replacement is available from Miele Customer Service.
<p>The LED lighting is not working on any of the shelves.</p>	<p>Liquid has been spilt onto the LED lighting on one of the shelves or into the contact openings on the left-hand shelf supports.</p> <p>The safety shut-off mechanism has switched off the LED lighting on all the shelves.</p> <ul style="list-style-type: none"> ■ Wipe the stainless steel trim with LED lighting with a damp cloth and dry it or leave it outside the refrigeration appliance to dry. ■ Ensure that the contacts are clean and dry before replacing the shelves with LED lighting. ■ Push in the shelf until it clicks into position. ■ Close the appliance door. <p>When the door is opened again, the interior lighting will come on.</p>
	<p>If this does not happen, there is a fault.</p> <ul style="list-style-type: none"> ■ Contact Miele Customer Service.

Causes of noises

The refrigeration appliance is producing various noises during operation. If the cooling performance is low, the refrigeration appliance will conserve energy but operate for longer. The volume will be lower. Food will be chilled faster if the cooling performance is high. The volume will be higher.

Normal noises	Cause
Brrrrr ...	A humming noise is made by the compressor. This noise can get louder for brief periods when the compressor switches on.
Blub, blub ...	A gurgling noise can be heard when the refrigerant circulates through the pipes.
Click ...	Clicking sounds occur whenever the thermostat switches the compressor on or off.
Crack ...	A cracking sound can be heard when materials expand inside the appliance.

Please bear in mind that a certain amount of noise is unavoidable (from the compressor and the refrigerant circulating through the cooling circuit).

Noises	Cause and solution
Rattling, clinking	The appliance is uneven. Realign the appliance using a level by raising or lowering the adjustable feet underneath the refrigeration appliance. For niches of 55" (140 cm) and more: place the stabilizing rods supplied underneath the appliance base.
	Drawers, baskets, or shelves are jiggling or are stuck. Check all removable parts and reinsert them correctly if required.
	Bottles or containers are touching each other. Separate them a little.

Information to help you rectify faults yourself and about Miele spare parts can be found at www.miele.com/service.

Contact in the event of a fault

In the event of a fault which you cannot remedy yourself, please contact your Miele dealer or Miele Customer Service.

You can book a Miele Service Call online at www.miele.com/service.

Contact information for Miele Customer Service can be found at the end of this document.

Please quote the model identifier and serial number of your appliance (SN) when contacting Miele Customer Service. Both pieces of information can be found on the data plate.

You will find the data plate inside your appliance.

Displaying appliance information

This can be found in Settings mode under Information **i** (see “Selecting additional settings”) or on the data plate inside the refrigeration appliance.

Appliance warranty and product registration

You can register your product and/or view the manufacturer’s warranty terms and conditions for Miele appliances and vacuum cleaners at www.mieleusa.com.

Please have the model and serial number of your appliance available when contacting Customer Service.
