Operating instructions
Coffee machine

Always read the operating instructions before setting up, installing, and commissioning the appliance.
This prevents both personal injury and damage to the appliance.

en-CA

M.-Nr. 11 842 680

Caring for the environment

Saving energy

The following tips can help you save energy and money as well as care for the environment:

- Operate the coffee machine in “Eco mode” (default setting).
- Energy consumption may increase if you change the factory default settings for the timer.

This setting uses more energy appears in the display.

- Switch the coffee machine off with the On / Off button ⏻ when it is not in use.
- Change the setting for the “Switch off after” timer to 15 minutes. The coffee machine will then switch itself off 15 minutes after the last drink was made or a sensor button was touched.

Packaging material

The packaging material used protects the coffee machine during transportation.
Please retain the original box and styrofoam pieces so that you can pack the appliance securely, should you need to transport it in the future.

Disposal of your old appliance

Electronic and electrical appliances contain many valuable materials. They also contain certain materials, compounds and components which were essential for the proper functioning and safe use of the equipment. These could be hazardous to your health and to the environment if disposed of with general waste or if handled incorrectly. Therefore, please do not dispose of your old appliance with general waste.

Consult with local authorities, dealers or Miele in order to dispose of and recycle electrical and electronic appliances. Miele assumes no responsibility for deleting any personal data left on the appliance being disposed. Please ensure that your old appliance is kept away from children until removal. Observe safety requirements for appliances that may tip over or pose an entrapment hazard.

Warnings and safety instructions

This coffee machine complies with all current local and national safety requirements. Inappropriate use can, however, lead to personal injury and material damage.

Read the operating instructions carefully before using the coffee machine. They contain important information on the installation, safety, use, and maintenance of the appliance. This prevents both personal injury and damage to the coffee machine.
Miele expressly and strongly advises you to read and follow the instructions in the chapter on installing and connecting the coffee machine as well as the safety notes and warnings.

Miele cannot be held liable for injury or damage caused by non-compliance with these instructions.

Keep these operating instructions in a safe place and pass them on to any future owner.

Appropriate use

- This coffee machine is intended for home use.
- The coffee machine is not suitable for outdoor use.
- This coffee machine must not be used at altitudes above 2,000 m.
- The coffee machine is intended only for domestic use and for the preparation of drinks such as espresso, cappuccino, latte macchiato, tea, etc. All other types of use are not permitted.
- This coffee machine can only be used by people with reduced physical, sensory, or mental capabilities or lack of experience and knowledge if they are supervised whilst using it.
They may only use the coffee machine without supervision if they have been shown how to use it in a safe manner. They must be able to recognize and understand the possible consequences of incorrect operation.

Safety with children

⚠ Danger of burning and scalding on the dispensing spouts.

Children's skin is far more sensitive to high temperatures than that of adults.

Ensure children do not touch hot surfaces of the coffee machine or place parts of their body under the dispensing spouts.

▶ Install the coffee machine where it is out of the reach of children.

▶ Keep children under 8 years of age away from the coffee machine and the power supply cable.

▶ Children aged 8 and older may only use the coffee machine without supervision if they have been shown how to use it in a safe manner.
Children aged 8 and older must be aware of the potential dangers caused by incorrect operation.

▶ Children should be supervised in the vicinity of the coffee machine. Never allow children to play with the appliance.

▶ Young children must not be allowed to clean the coffee machine at all. Cleaning may only be carried out by children 8 years of age or older under the supervision of an adult.

▶ Keep in mind that espresso and coffee are not suitable drinks for children.

▶ Danger of suffocation. While playing, children may become entangled in packaging material (such as plastic wrapping) or pull the packaging material over their head, presenting the risk of suffocation. Keep packaging material away from children.

Technical safety

▶ Damage to the coffee machine can compromise your safety. Before installing the appliance, check it for visible signs of damage. Do not use a damaged coffee machine.

▶ Before connecting the coffee machine, make sure that the connection data on the data plate (voltage and frequency) matches that of the domestic electrical supply.
This data must match to prevent the coffee machine from being damaged. Consult a qualified electrician if in any doubt.

▶ The electrical safety of this coffee machine can only be guaranteed when correctly grounded. It is essential that this basic safety requirement is fulfilled. If in doubt, the electrical installation should be checked by a qualified electrician.

▶ Temporary or permanent operation on an autonomous power supply system or a power supply system that is not synchronized with the grid power supply (e.g., island networks, back-up systems) is possible. A prerequisite for operation is that the power supply system complies with the specifications of EN 50160 or an equivalent local standard.
The function and operation of the protective measures provided in the domestic electrical installation and in this Miele product must also be maintained in isolated operation or in operation that is not synchronized with the grid power supply, or these measures must be replaced by equivalent measures in the installation. As described, for example, in the current version of VDE-AR-E 2510-2 or an equivalent local standard.

▶ Do not connect the coffee machine to the domestic electrical supply using a multi-socket adapter or an extension cord. These do not guarantee the required safety of the appliance (risk of fire).

▶ The coffee machine may not be used in mobile installations such as ships.

▶ Unplug the coffee machine from the domestic electrical supply immediately if you notice any damage or smell scorching, for example.

▶ Do not operate any appliance with a damaged cord or plug or after the appliance malfunctions, or has been damaged in any manner. Return appliance to the nearest authorized service facility for examination, repair or adjustment.

Warnings and safety instructions

▶ Ensure that the power supply cable will not be pinched or damaged by any sharp edges.

▶ When doing so make sure that the power supply cable does not hang down. This can result in a trip hazard or damage to the coffee machine.

▶ Do not let cord hang over edge of table or counter, or touch hot surfaces.

▶ Do not place on or near a hot gas or electric burner, or in a heated oven.

▶ Only use the coffee machine in rooms where the ambient temperature is between +50°F (10°C) and +100°F (38°C).

▶ Position the coffee machine at a height of at least 33 7/16" (850 mm) from the floor.

▶ Danger of overheating. Please ensure that there is adequate ventilation around the coffee machine. Do not cover the coffee machine with dish towels, etc. while it is in use.

▶ If the coffee machine is installed behind a closed cabinet door front, it may only be used with the cabinet door open (see “Installation” for the minimum niche size). Heat and moisture can build up behind the cabinet door front when closed. This can result in damage to the machine and / or cabinetry. Do not close the cabinet door while the coffee machine is in use. Leave the cabinet door open until the coffee machine has cooled down completely.

▶ Protect the coffee machine from water and splash water. Do not immerse the coffee machine in water.

▶ Repairs, including on the power supply cable, are only to be carried out by Miele authorized technicians. Repairs by unqualified persons can cause considerable danger to users.

▶ While the coffee machine is under warranty, repairs should only be undertaken by a service technician authorized by Miele Service. Otherwise the warranty will be invalidated.

▶ For repairs, the coffee system must be disconnected from the domestic electrical supply.
The coffee machine is only disconnected from the domestic electrical supply if

- The coffee machine plug has been removed from the socket. To do this, pull only the plug, not the power supply cable.
- The circuit breakers to the domestic electrical supply are turned off.
- Any circuit breakers in the domestic electrical supply are fully unscrewed.

▶ Do not open the coffee machine housing under any circumstances. Any contact with live connections or tampering with the electrical or mechanical components of the coffee machine will endanger your safety and may lead to appliance malfunctions.

▶ To protect against fire, electric shock and injury to persons do not immerse cord, plugs, or coffee machine in water or other liquid.

▶ Disconnect the coffee system from the domestic electrical supply if it is not going to be used for some time (e.g., while on vacation).

▶ Only use original Miele accessories. If other parts are used, warranty, performance, and / or product liability claims will be invalidated.

Correct use

⚠ Danger of burning and scalding on the dispensing spouts.
The liquids and steam dispensed are very hot.

Keep away from the area underneath the spouts when hot liquids and steam are being dispensed.

Do not touch hot components.

Hot liquid or steam could spatter from the nozzles. Ensure that the central spout is clean and installed correctly.

Water in the drip tray can also be very hot. Take care when emptying it.

Warnings and safety instructions

▶ Please note the following regarding water:

- The water quality must conform to the requirements for drinking water in the country in which the coffee machine is being used.
- Only use cold, fresh tap water to fill the water container. Hot or warm water or other liquids can damage the coffee machine.
- Change the water every day to prevent a build-up of bacteria.
- Do not use sparkling water.

▶ Only put roasted coffee beans in the bean container. Do not place coffee beans which have been treated with additives or ground coffee inside the bean containers.

▶ Do not fill the bean container with any type of liquid.

▶ Do not use green (unroasted) coffee beans or mixtures of coffee beans which contain green coffee beans. Green coffee beans are very hard and still contain residual moisture. These can damage the coffee machine grinder as soon as grinding begins.

▶ Do not use coffee beans that have been treated with sugar, caramel, or other substances and do not put liquids containing sugar in the coffee machine. Sugar will damage the appliance.

▶ Only fill the coffee chute with ground coffee beans.

▶ Do not use caramelized ground coffee. This contains sugar which can clog the coffee machine's brew unit. The cleaning tablet for degreasing the brew unit does not remove these residues.

▶ The milk used must not contain any additives. Most additives contain sugar which would stick to the milk pipework.

▶ If using dairy milk make sure that it has been pasteurized.

▶ Do not place flaming alcohol mixtures underneath the central spout. The flames could ignite plastic components and cause them to melt.

▶ Do not use open flames, such as a candle, on or near the coffee machine. The coffee machine could catch fire with the risk of the fire spreading.

▶ Do not use the coffee machine to clean any other objects.

Accessories and spare parts

▶ Miele can only guarantee the safety of the appliance when original Miele parts are used. Faulty components must only be replaced with genuine Miele replacement parts.

▶ Only use original Miele accessories. If other parts are used, warranty, performance, and / or product liability claims will be invalidated.

▶ Miele will guarantee to supply functional spare parts for a minimum of 10 years and up to 15 years following the discontinuation of your coffee machine.

Cleaning and care

▶ Disconnect the coffee machine from the domestic electrical supply before cleaning.

▶ Clean the coffee machine daily, particularly before using for the first time (see “Cleaning and care”).

▶ Ensure that all components in which milk is transported are cleaned carefully on a regular basis. Milk naturally contains bacteria that rapidly multiply if the milk pipework is not cleaned properly.

▶ Do not use a steam cleaner to clean the appliance. The steam could reach live electrical components and cause a short circuit.

▶ Descale the coffee machine regularly depending on the water hardness. Descale the appliance more frequently if you use hard water. Miele cannot be held liable for damage resulting from not descaling the machine, using the wrong descaling agent, or an unsuitable descaling solution concentration.

▶ Degrease the brew unit regularly with the cleaning tablets. Depending on the natural oil content of the coffee used, the brew unit can become blocked quite quickly.

▶ The espresso / coffee grounds must be disposed of in the organic waste or compost, not in the sink. The drain can clog up as a result.

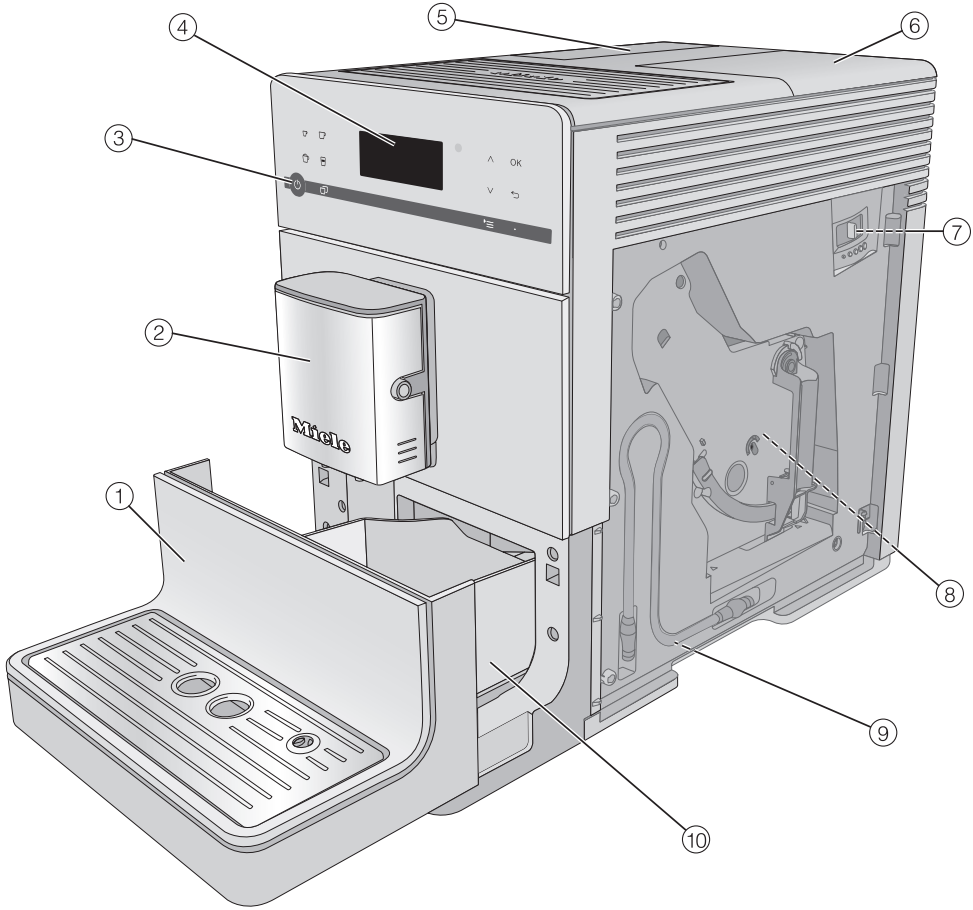

For coffee machines with stainless steel surfaces:

▶ Do not use sticky notes, adhesive tape, or other types of adhesive on the stainless steel surfaces.

▶ Stainless steel surfaces are susceptible to scratching. Even magnets can cause scratches.

Sensor buttons

To operate the coffee machine, tap the sensor buttons with your finger.

An audible signal is generated each time a button is tapped. You can adjust the volume of the signal tones or switch the tones off (see “Settings – Volume”).

Drinks menu

When the following appears in the display, you are in the drinks menu: Select drink.

You can find more drinks in the Additional drinks menu (‣≡ sensor button).

Selecting a menu and navigating within a menu

To select a menu, touch the ‣≡ sensor button.

You will then be able to start an action or change settings in the menu. A scroll bar at the right of the display shows that additional options or text are available.

To select an option, touch the arrow buttons ∧ and ∨ until the option you want is highlighted.

Touch the *OK* sensor button to confirm your selection.

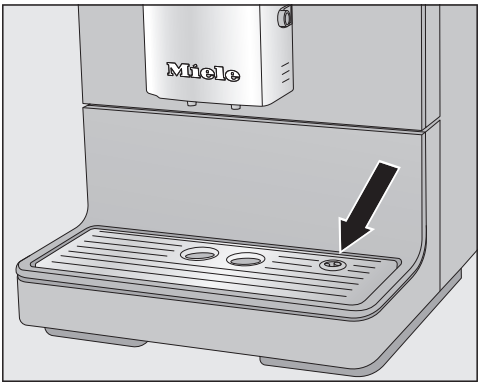

The setting which is currently selected in a list will have a check ✓ beside it.

Exiting a menu or cancelling an action

To exit the current menu, touch the ⮌ sensor button.

Before using for the first time

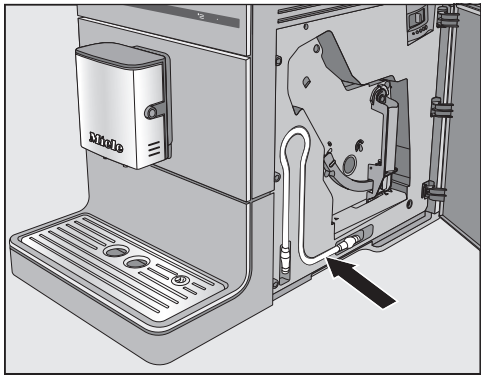

- Remove any notices from the machine.

- Remove the protective film from the drip tray cover and place it into the lower panel.
- Place the coffee machine on a level flat surface that is not sensitive to water (see “Installation”).

Clean the coffee machine thoroughly (see “Cleaning and care”) before filling it with water and coffee beans.

- Insert the plug of the coffee machine into the socket.
- Remove the water container and fill it with fresh, cold tap water. Only fill the water container up to the “max.” marker and then refit it in the machine.
- Take the lid off the coffee bean container, fill it with roasted coffee beans, and replace the lid.

Useful tip: The milk pipework can be stored behind the appliance door when not in use.

Switching on for the first time

- Touch the On / Off button ⏻.

Miele – Willkommen appears briefly in the display.

- Use the arrow buttons ∧∨ to highlight the required language. Touch *OK*.

You might also be asked for your location.

Your machine has been successfully set up and is ready for use.

- Confirm with *OK*.

The coffee machine heats up and rinses the pipework. The water used for rinsing will run out of the central spout.

- Before preparing milk for the first time, rinse the milk pipework (see “Cleaning and care – Rinsing the milk pipework”).

Please note that the full aroma of the coffee and typical crema will not develop fully until several coffees have been made.

Initial commissioning

To ensure that any coffee residues from the factory testing process are removed from the brewing system, please throw away the first 2 cups of coffee when using the coffee machine for the first time.

A larger quantity of coffee beans is ground for the first coffee drinks. This means that powder from the coffee grounds may adhere to the lid of the drip tray.

Water hardness is an indication of the amount of minerals dissolved in water. The more minerals in the water, the higher the water hardness. The harder the water is, the more frequently the coffee machine needs to be descaled.

The coffee machine measures the amount of water used and steam made. Depending on the level of water hardness set, more or fewer drinks can be dispensed before the appliance needs to be descaled.

Program the coffee machine to the water hardness level of your area so that it functions correctly and does not get damaged. A prompt to descale the coffee machine will then appear in the display at the correct time.

Your local water authority will be able to tell you the hardness of the water in your area.

The water hardness level is set to 3 at the factory.

The appliance has 4 programmable hardness levels:

°dH	**mmol/l**	**ppm** ($mg/l\ CaCO_3$)	**Setting***
0–8.4	0–1.5	0–150	Soft 1
8.4–14	1.5–2.5	150–250	Medium 2
14–21	2.5–3.8	250–375	Hard 3
> 21	> 3.8	> 375	Very hard 4

* The hardness levels shown in the display may differ from the hardness level designations in your area. You **must** follow the values in the chart to set your coffee machine to your local water hardness level.

Setting the water hardness

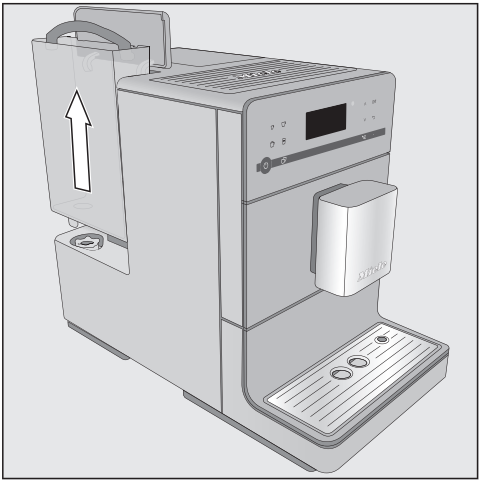

- Touch the ‣≡ sensor button.
- Select Settings ⚑ | Water hardness and confirm with *OK*.
- Select the hardness level and confirm with *OK*.

The setting is now saved.

Filling the water container

⚠ Risk to health due to contaminated water.
Bacteria can develop in water which has been sitting in the water container for too long and is a risk to your health.
Change the water in the water container **every day**.

⚠ Risk of damage due to incorrect operation.
Unsuitable liquids such as hot or warm water or other liquids can damage the coffee machine.
Carbonated water leaves too much limescale in the coffee machine.
Only use cold, fresh tap water to fill the water container.

- Open the lid on the left-hand side of the coffee machine.
- Pull the water container up and out of the appliance.
- Fill the water container with fresh, cold tap water up to the *max.* mark.
- Replace the water container and close the lid.

Make sure that the water container handle is on the right so that the lid can close properly.

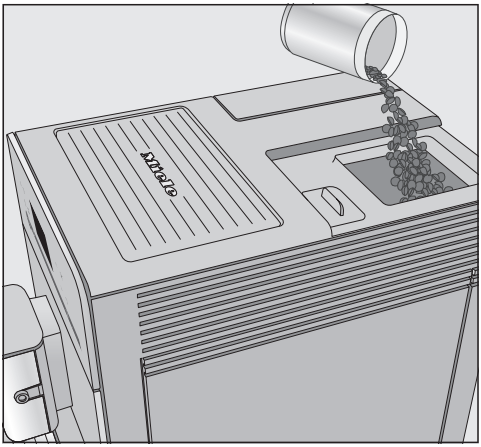

If the water container sits a little too high or at an angle, check that it is fitted correctly or whether the surface that it is sitting on is soiled. Water could leak. If necessary, clean the surface that the water container sits on.

⚠ Risk of damage to the grinder due to incorrect operation.
The coffee machine will be damaged if the bean container is filled with unsuitable substances such as liquids, ground coffee, or coffee beans treated with sugar, caramel, or similar.
In addition, green (unroasted) coffee beans or mixtures of coffee beans which contain green coffee beans can damage the grinder. Green coffee beans are very hard and still contain residual moisture. These can damage the coffee machine grinder as soon as grinding begins.
Only put roasted coffee beans in the bean container.

Coffee or espresso can be made from whole roasted coffee beans which are freshly ground for each cup. This requires the coffee bean container to be filled with coffee beans.

Alternatively, you can make coffee drinks with ready ground coffee.

Useful tip: You can use a nut or seed grinder to grind green coffee beans. These grinders generally have a rotating stainless steel blade. You can then add the ground green coffee **one portion at a time** to the ground coffee chute and make the desired coffee drink.

- Take the lid off the coffee bean container.
- Fill the bean container with roasted coffee beans.
- Replace the lid.

Switching the coffee machine on

■ Touch the On / Off button ⏻.

The appliance heats up and rinses the pipework. Hot water will run out of the central spout.

When Select drink appears in the display, you can make drinks.

If the coffee machine is already at operating temperature, rinsing will not take place when the appliance is switched on.

If no buttons are touched or maintenance programs carried out, the display will switch off after approx. 7 minutes to save energy.
The right-hand LED will flash on and off as long as the coffee machine is switched on.

■ Touch one of the sensor buttons to wake the coffee machine up again to make a drink.

Switching the coffee machine off

■ Touch the On / Off button ⏻.

If you have made a drink using milk, Place valve in drip tray will appear in the display.

■ Insert the end of the milk pipework into the aperture in the drip tray, then touch *OK*.

If coffee has been dispensed, the coffee machine will rinse the pipework automatically before switching off.

Switching off for longer periods of time

If the coffee machine is not going to be used for a while, e.g., if you are going on vacation, remember to do the following:

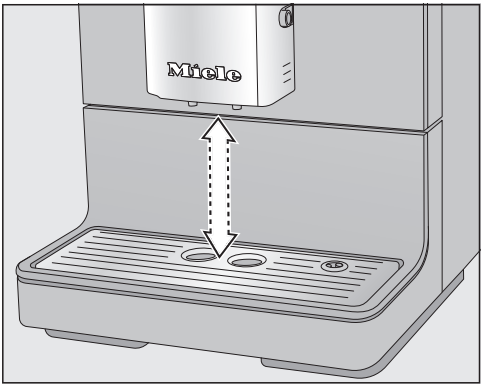

■ Empty the drip tray, the grounds container, and the water container.

■ Clean all parts thoroughly, including the brew unit.

■ If necessary, switch off the coffee machine and unplug it to disconnect it from the domestic electrical supply.

Adjusting the central spout to the cup height

You can set the central spout to the height of the cups or glasses used. This ensures that coffees or espressos do not cool down too quickly and that the crema lasts longer.

- Pull the central spout down to the same level as the rim of the cup.
  Or push the central spout up until the desired cups fits underneath it.

⚠ Danger of burning and scalding on the dispensing spouts.
The liquids and steam dispensed are very hot and can cause scalding.
Keep away from the area underneath the spouts when hot liquids and steam are being dispensed.
Do not touch hot components.

Coffee

Making coffee with and without milk

The following drinks can be made:

- **Ristretto** is a strong, concentrated espresso. It is prepared with the same amount of coffee as for an espresso but with a lot less water.
- **Espresso** is a strong aromatic coffee with a thick hazelnut-brown coloured froth – known as the crema – on top. We recommend using espresso-roasted coffee beans to make an espresso.
- **Coffee** differs from espresso by the increased amount of water and the roast of the beans.
  We recommend using coffee beans of the correct roast to make the coffee.
- **Long coffee** is a coffee with considerably more water.
- **Cappuccino** consists of approx. 2 thirds milk froth and 1 third espresso.
- **Latte macchiato** consists of 1 third each of hot milk, milk froth, and espresso.
- **Caffè latte** consists of espresso and hot milk.

Hot milk and **milk froth** can also be made.

Milk preparation

Cow's milk or alternative plant-based dairy products (e.g., soy milk) containing added sugar can clog up the milk pipework and any other parts that carry milk. Residues from unsuitable liquids can interfere with milk preparation.
The milk used must not contain any additives.

Dairy milk naturally contains bacteria.
If using dairy milk, make sure that it has been pasteurized, e.g., pasteurized cow's milk.

You can prepare hot milk and milk froth using cow's milk or alternative plant-based dairy products.

Once the appliance has heated up, the milk will be drawn up into the central spout where it is heated by steam and also frothed for drinks requiring milk froth. However, the consistency of the milk froth will vary greatly depending on the type of milk used. Not all types of milk are suitable for milk froth.

Useful tip: Using cold cow's milk (< +50°F /+10°C) with a protein content of at least 3% will produce the perfect milk froth.
You can select milk with a fat content according to your personal preference. With whole milk (at least 3.5% fat), the milk froth will be slightly creamier than with low-fat milk.

Alternative plant-based dairy products – hereafter referred to as “alternative dairy products” – contain different ingredients than cow’s milk, for example. Due to natural settling, dairy products tend to thicken. When preparing hot milk or milk froth, this thicker consistency can prevent the alternative dairy products from being drawn into the milk pipework.

Stir alternative dairy products well immediately before preparation.

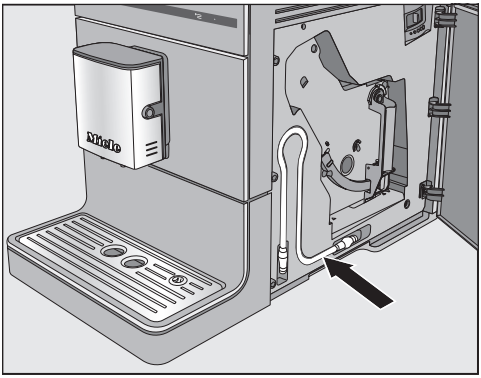

Do not shake alternative dairy products. Shaking causes foam to form in the packaging and impairs the preparation process.

Useful tip: Rinse the milk pipework manually immediately after preparation.

Using milk from milk cartons or other suitable containers

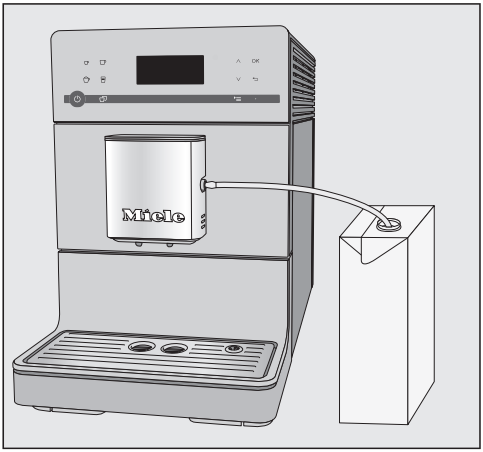

If you have not made any milk drinks for a while, rinse the milk pipework thoroughly before making the first drink.

Using the milk pipework, you can prepare milk directly from a milk carton or other suitable containers.

The milk pipework is located behind the appliance door.

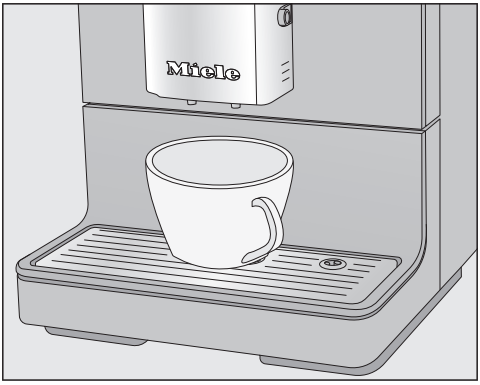

Useful tip: For high-quality milk froth, always use cold milk (< 50°F/10°C).

- Connect the milk pipework to the aperture in the central spout.
- If you use alternative dairy products, make sure that you stir it well. To ensure the best preparation, alternative dairy products must be stirred and not shaken.
- Place a container with sufficient milk next to the coffee machine.
- Place the end of the milk pipework in the container. Make sure that it is sufficiently immersed in the milk.

Useful tip: The Miele Milk Flask is the perfect addition to Miele Coffee Machines if you make a lot of coffees with milk. The milk flask is dishwasher-safe and easy to store in the fridge after preparing. Good milk froth can only be made with cold milk (< 10°C).
The Miele milk flask is available to order from the Miele online shop, from Miele Service, or from your Miele dealer.

Making a coffee drink

- Place a cup under the central spout.
- If you want to make a coffee with hot milk or milk froth, prepare the milk carton with the milk pipework.
- Select a drink: touch the sensor button for the drink you want. Or select a drink from the Additional drinks menu (▸≡ sensor button).

Dispensing will start.

Cancelling a drink

- To cancel making a drink, touch the drinks sensor button or the ▸≡ sensor button for drinks from Additional drinks again.

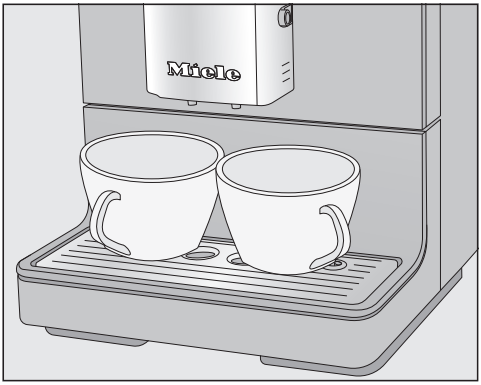

The coffee machine will stop dispensing.

Useful tip: You can also cancel making a drink by touching the *OK* sensor button as soon as Stop appears in the display.

When making **coffee with milk** or **2 portions of a drink** you can cancel each stage individually by touching the *OK* sensor button.

2 portions (⎘ sensor button)

You can dispense 2 portions of a drink into 1 large cup or into 2 cups at the same time.

- Place a cup under each of the coffee dispensers in the central spout.
- Press the ⎘ sensor button immediately before or after you start making a drink.

The dispensing starts and 2 portions of the desired drink will be dispensed.

If, after a while, you have not touched any of the drink sensor buttons, the "2 portions" ⎘ option will revert back to single portions.

Coffee Pot

You can make several cups of coffee one after the other automatically with the Coffee Pot function (max. 0.75 litre) to fill a coffee pot, for example. Up to 6 cups can be made in this way.

You can use the Coffee Pot function twice in a row. After this, the coffee machine needs to cool down for one hour in order to prevent it from being damaged.

Make sure that the bean container and the water container have enough beans and water inside them before starting the Coffee Pot function.

- Place a sufficiently large container under the central spout.
- Touch the ›≡ sensor button.
- Select Additional drinks | Coffee Pot and confirm with *OK*.
- Select the number of cups you want (3 to 6) and confirm with *OK*.
- Follow the instructions in the display.

Each portion of coffee will be ground, brewed, and dispensed individually. You can follow the process on the display.

Cancelling Coffee Pot

- Touch the ›≡ sensor button.

Coffee Pot dispensing will stop.

Useful tip: A stainless steel insulated flask is available as an optional accessory from Miele for the "Coffee pot" function.
The CJ JUG insulated flask is available to order from the Miele online shop, from Miele Service, or from your Miele dealer.

Making coffee drinks from ground coffee

To make drinks using ready ground coffee, add a portion of ground coffee to the ground coffee chute.
This allows you to make a decaffeinated coffee even if the bean container is already filled with regular coffee beans, for example.

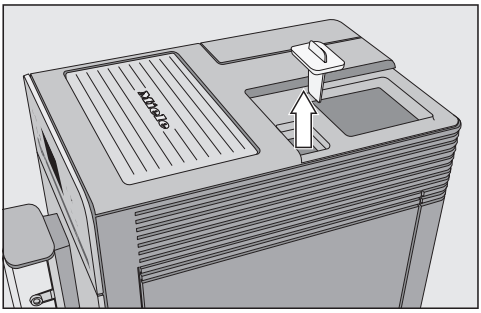

Only **1** portion of coffee or espresso can be made at a time when using ready ground coffee.

Place a **maximum of 12 g** in the ground coffee chute.
If too much ground coffee is added, the brew unit will not be able to process the coffee.

Adding ground coffee

The coffee machine will use all the ground coffee which has been added to the chute to make the next coffee.

- Touch the ›≡ sensor button.
- Select Additional drinks | Use ground coffee? and confirm with *OK*.

- First take the lid off of the coffee bean container and then take the cover off the ground coffee chute.

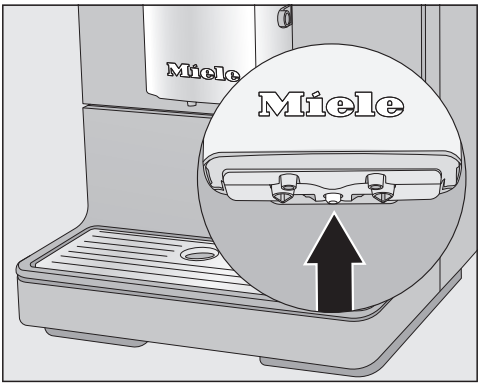

Place a **maximum of** 12 g in the ground coffee chute.

- Replace the cover to the ground coffee chute after adding the ground coffee.
- Replace the lid on the coffee bean container.
- Place a cup under the central spout.
- Select a drink.

The coffee will now be made.

Dispensing hot water (CM 5410, CM 5510, CM 5710)

Please note that the water dispensed is not hot enough for making black tea.

- Place a suitable container centrally underneath the central spout.
- Touch the ‣≡ sensor button.
- Select Additional drinks | Hot Water and confirm with *OK*.

Hot water will run into the container under the central spout.

The grinder setting determines the contact time between the ground coffee and the water, known as the extraction time. Only when the ideal grinder setting is selected can the appliance dispense a perfect cup of coffee with a fine, hazelnut-brown crema.

Identifying the ideal grinder setting

There are various ways to tell whether the coffee grinder is set correctly.

The coffee has been **too coarsely** ground if:

- The espresso or coffee flows into the cup very quickly.
- The espresso or coffee tastes sour.
- The crema is very pale and uneven.

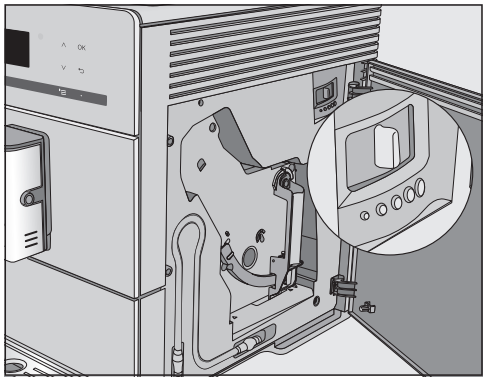

The coffee has been **too finely** ground if:

- The espresso or coffee flows into the cup very slowly.
- The espresso or coffee tastes too bitter.
- The crema is dark brown.

Adjusting the fineness of grind

If the grinder setting is adjusted by more than one level, the grinder may be damaged.
Only adjust the grinder one setting at a time.
Each time you adjust the setting, start making a new drink so that the beans are ground. Adjust the grinder setting one setting at a time again.

■ Open the appliance door.

■ Push the slide control a maximum of one setting to the left (for finer grinding) or to the right (for coarser grinding).

The grinder setting you select will be used for all coffee drinks.

■ Close the appliance door.

■ Make one cup of coffee.

After this, you can adjust the grinder setting again.

The altered grinder setting will not be used until after the second coffee has been dispensed.

The grinder will naturally wear out slightly over time. Set the grinder to a finer setting if necessary.

Quantity of coffee, brewing temperature, and pre-brewing

You can set the quantity of coffee, the brewing temperature, and pre-brewing for each drink individually. To do this, first select the drink from the Parameters menu and then adjust the drink parameters.

- Touch the ☰ sensor button and select Parameters.
- Select the drink and confirm with *OK*.

The current settings for the quantity of coffee, brewing temperature, and pre-brewing will be displayed for this drink.

- Select Amount of coffee, Brew temperature, or Pre-brewing.
- Select the setting you want and confirm with *OK*.

The setting is now saved.

CM 5410, CM 5510, CM 5710: The changed parameter is always saved in the current profile. The name of the current profile is shown in the top left of the display.

Quantity of coffee

The coffee machine can grind and brew 6–14 g of coffee beans per cup. The greater the quantity, the stronger the coffee.

The quantity of coffee is **too low** if the espresso or coffee lacks body.

Increase the quantity of coffee so that more ground coffee is brewed.

The quantity of coffee is **too high** if the espresso or coffee tastes bitter.

Decrease the quantity of coffee so that less ground coffee is brewed.

Useful tip: If the coffee is too strong for you or it tastes bitter, try a different type of bean.

Brewing temperature

The brewing temperature must be adapted to the roast of the beans you are using. This is crucial whether you are making espresso or coffee.

Several types are sensitive to high brewing temperatures, resulting in an impaired taste. If your coffee tastes bitter, the brewing temperature you have selected might be too high.

Espresso is usually brewed at higher temperatures.

Pre-brewing the ground coffee

When the pre-brewing function is turned on, the ground coffee is first moistened with a little hot water. The ground coffee swells a little. The remaining amount of water is then pressed through the moistened coffee grounds shortly after. If your coffee tastes too bland and you want too add some spice and richness, try the “Pre-brewing” function. Depending on the type of coffee used, pre-brewing can intensify the taste.

You can set a short or long duration for pre-brewing or turn the “Pre-brewing” function off completely.

Useful tip: We particularly recommend using the “Pre-brewing” function to make coffee.

The flavour of the coffee produced depends not only on the type of coffee, but also on the amount of water used. You can program the amount of water for all coffee drinks and hot water to suit the size of your cups and the type of coffee you are using. This does not alter the amount of coffee used.

For coffee drinks that use milk, you can not only set the amount of espresso or coffee but also the amount of milk or milk froth to be dispensed with these drinks. Additionally, you can set the portion sizes for hot milk and milk froth alone.

A maximum portion size can be programmed for each type of drink. Dispensing stops once this has been reached. The maximum possible portion size is then saved by the machine for this type of drink.

If the water container becomes empty whilst making a drink, the coffee machine will stop programming the portion size. The portion size will **not** be saved.

There are two ways of initiating the programming of the portion size:

- by touching the drink button when you are making a coffee, or
- by selecting Portion size in the Parameters menu.

CM 5410, CM 5510, CM 5710: The changed portion size is always saved in the current profile. The name of the current profile is shown in the top left of the display.

Cancelling portion size programming

- Touch the drinks button again or the ‣≡ sensor button for drinks from Additional drinks.

Changing the portion size while making a drink

You can change and save the portion size for espresso, coffee, cappuccino, and latte macchiato while making these drinks.

- Place a cup under the central spout.
- Touch the sensor button for the drink you want until Change appears in the display.

An audible tone will sound as soon as portion size programming starts. (As long as the volume has been set for the audible signals – see “Volume”.)

The desired drink will be made and Save will appear in the display.

- When the cup is filled up to the level you want, confirm with *OK*.

If you want to change the portion size for coffee made with milk, the ingredients which make up the drink will be saved one after the other while the drink is being made.

- When the quantity for each ingredient reaches the level you want, confirm with *OK*.

The programmed mix of ingredients and the portion size will now be dispensed every time that particular drink is selected.

Changing the portion sizes in the Parameters menu

You can only change the portion sizes for **long coffee**, **caffè latte**, **hot milk**, and **milk froth** via the Parameters menu.

- Place a suitable container underneath the central spout.
- Touch the ☰ sensor button and select Parameters.
- Select the drink you want.
- Select Portion size and confirm with *OK*.

Now proceed as for changing the portion size while making a drink.

(CM 5410, CM 5510, CM 5710)

In addition to the Miele drinks menu (Miele profile), you can create individual profiles to cater for different tastes and preferences.

Within the profile, you can adjust the portion sizes and parameters individually for all drinks.

The name of the current profile is shown in the top left of the display.

Creating profiles

■ Touch the ‣≡ sensor button and select Profiles. Confirm with *OK*.

The Profiles menu opens.

■ Select Create profile.

The editor will open in the display.

■ Enter the profile name:

- To enter a character, highlight the one you want and confirm your choice with *OK*.
- To delete a character, touch the ⮌ sensor button.
- To save the name, select the check ✓ and confirm with *OK*.

The profile has been created.

Changing drinks within a profile

When you change the parameters of a drink within a profile, these settings only apply to the active profile. The settings for drinks contained within other profiles remain unaffected.

■ Select the profile you want.

The name of the selected profile is shown in the top left of the display.

You can now change the drinks individually.

Making drinks stored in a profile

■ Place a suitable container underneath the central spout.

■ Touch the ‣≡ sensor button and select Profiles.

■ Select the profile you want and confirm with *OK*.

■ Select the drink you want.

The machine starts dispensing the drink.

Changing the name

This option can only be selected if a profile has been allocated in addition to the Miele standard profile.

■ Select Change name with the arrow buttons ∧∨ and touch *OK*.

■ Proceed in the same way as when creating the profile:

- To delete a character, touch the ⮌ sensor button.
- To enter new characters, highlight the relevant character and confirm with *OK*,
- Save the new name by selecting ✓ in the display and touching *OK*.

Deleting a profile

This option can only be selected if a profile has been allocated in addition to the Miele standard profile.

■ Select Delete profile and confirm with *OK*.

■ Select the profile you wish to delete.

■ Select Yes and confirm with *OK*.

The profile will be deleted.

Setting when the profile should change (Change profile)

You can choose between the following options:

- **Manual**: The selected profile will remain active until you select another one.
- **After each use**: The machine will revert to the Miele profile whenever a drink is dispensed.
- **When turned on**: The Miele profile will be displayed whenever the coffee machine is switched on, regardless of which profile was selected before the machine was last switched off.

■ Select Change profile and confirm with *OK*.

■ Select the option you want and confirm with *OK*.

Displaying and changing Settings

The drinks menu is displayed.

- Touch the ☰ sensor button.
- Select Settings and confirm with *OK*.
- Select the menu option that you want to display or change.
- Confirm with *OK*.
- Change the setting as required and confirm with *OK*.

Language

You can select the language and, if applicable, your location for all display text.

Useful tip: If you select the wrong language by mistake, you can find the Language option again via the ⚑ symbol.

Timer: switch off after

If none of the buttons have been pressed or no drink has been prepared, the coffee machine will switch itself off after 30 minutes to save energy.

You can change this pre-setting using the arrow buttons ∨∧ to a time between 15 minutes and 9 hours.

Eco Mode

Eco mode is an energy-saving mode. The system does not heat up until someone starts making a drink.

Eco Mode is activated by default.

Info (display information)

You can display the number of drinks dispensed so far and how many more can be dispensed until the maintenance programs have to be run.

System lock 🔒

You can lock the coffee machine to prevent it from being used by unauthorized persons, such as children.

Temporarily deactivating the system lock 🔒

- Press and hold *OK* for 6 seconds.

The system lock is reactivated when the coffee machine is next switched off.

Water hardness

More information can be found under “Water hardness”.

Display brightness

Change the display brightness using the arrow buttons ∧∨.

Volume

The volume of the alarm and the sensor buttons can be set using the arrow buttons ∧∨.

Useful tip: To switch off the tones, touch the arrow buttons ∨ until no more segments are filled in and Turned off appears.

Factory default settings

You can reset the coffee machine to its factory default settings.

The following will **not** be reset:

- The number of drinks dispensed and the appliance status (No. of portions until appliance needs descaling, ... brew unit needs degreasing)
- Language
- Profiles and the associated drinks (CM 5410, CM 5510, CM 5710)

Demo mode (showroom program)

Do not activate this function for domestic use.

The Demo Mode function enables the coffee machine to be demonstrated in shops or showrooms. Although the sensor buttons and display seem to be working, the thermo block is not being heated. The appliance does not dispense any drinks, run maintenance programs, or save any settings.

You can activate demo mode without commissioning the appliance for the first time. The water container is empty or not inserted. Switch the coffee machine on. As soon as the Fill and replace the water container message appears, touch the ⮌ button for 5 seconds. Demo mode is activated.

⚠ Risk to health due to inadequate cleaning.
Heat and moisture inside the coffee machine can cause coffee residues to become mouldy and / or milk residues to go off and pose a risk to health.
Carefully clean the coffee machine regularly.

Overview of cleaning intervals

Recommended frequency	What do I have to clean / maintain?
Daily (at the end of the day)	Water container
	Grounds container
	Drip tray and drip tray cover
Once a week (more often if heavily soiled)	Central spout with integrated Cappuccinatore
	Brew unit
	Area underneath the brew unit and the drip tray
	Housing (particularly important immediately after descaling the appliance)
	Milk pipework
Once a month	Bean container and ground coffee chute
	Water container filter
When prompted	Degrease the brew unit (with 1 cleaning tablet)
	Descale the appliance (with 1 descaling tablet)

Cleaning by hand or in the dishwasher

The brew unit is **not** dishwasher-safe.
Only clean the brew unit by hand with warm water. **Do not use any cleaning agents**.

The following components must be cleaned **by hand only**:

- Stainless steel cover of the central spout
- Brew unit
- Bean container lid
- Lower panel

⚠ Risk of damage as a result of excessively high dishwasher temperatures.
Components may be ruined (e.g., may become warped) if washed in a dishwasher at temperatures higher than 55°C.
For dishwasher-safe components, always select dishwasher programs with a maximum temperature of 55°C.

Contact with natural dyes, such as those found in carrots, tomatoes, and ketchup, may discolour the plastic parts in the dishwasher. This discolouration does not affect the stability of the parts.

The following components are **dishwasher-safe**:

- Drip tray and lid
- Drip tray cover
- Grounds container
- Water container
- Central spout (without stainless steel cover)
- Ground coffee chute cover

⚠ Danger of burning and scalding on hot components or by hot liquids.
Components can become very hot during operation. Touching hot components can cause burning. The liquids and steam dispensed are very hot and can cause scalding.
Keep away from the area underneath the spouts when hot liquids and steam are being dispensed.
Always allow the coffee machine to cool down before cleaning it.
Please be aware that water in the drip tray can also be very hot.

⚠ Risk of damage due to moisture ingress.
The steam from a steam cleaner could reach electrical components and cause a short circuit.
Do not use a steam cleaner to clean the coffee machine.

It is important to clean the appliance regularly, as the used coffee grounds will soon go mouldy. Milk residues can go off and can block the milk pipework.

Unsuitable cleaning agents

Contact with unsuitable cleaning agents can alter or discolour the external surfaces. All surfaces are susceptible to scratching. Scratches on glass can in some circumstances lead to breakage.
Remove any residual cleaning agent immediately. Make sure you remove any spillages or splashes of descaling agent immediately.

To avoid damaging the surfaces, do not use:

- cleaning agents containing soda, ammonia, acids, or chlorides
- solvent-based cleaning agents
- cleaning agents containing descaling agents (unsuitable for cleaning the housing)
- stainless steel cleaning agents
- dishwasher cleaners (unsuitable for cleaning the housing)
- glass cleaning agents
- cleaning agents for ceramic cooktops
- oven cleaners
- abrasive cleaning agents, e.g., scouring powder, scouring cream, bath bricks
- hard, abrasive sponges (e.g., pot scourers, brushes, or sponges which have been previously used with abrasive cleaning agents)
- eraser blocks
- sharp metal scrapers
- steel wool or stainless steel wire scourers

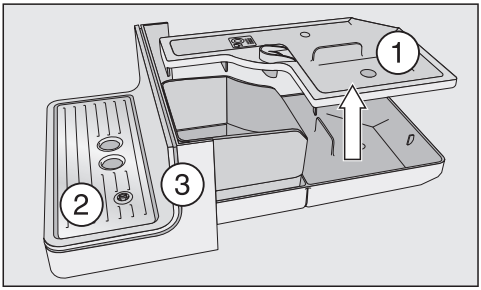

Grounds container, drip tray, and drip tray cover

Clean the drip tray and grounds container **every day** to avoid unpleasant smells and mildew.

The grounds container is located in the drip tray. Water from rinsing also collects in the grounds container.

A prompt will appear in the display when the drip tray and / or the grounds container is full and needs to be emptied. Empty the drip tray **and** the grounds container.

⚠ Risk of burns!
If the rinsing process has just finished, wait a while before removing the drip tray from the coffee machine. The water used for rinsing will continue to run out of the coffee spouts for a while.

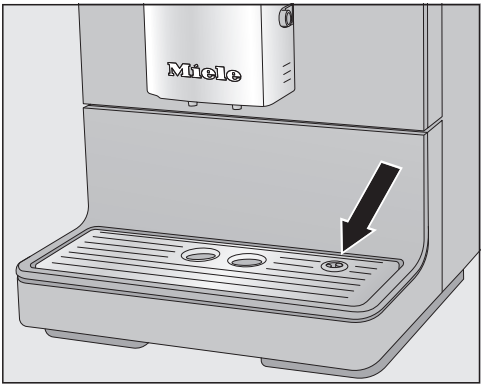

- Pull the drip tray carefully out of the coffee machine. Take the lid ① off.
- Empty the drip tray **and** grounds container.
- Remove the drip tray cover ② and the lower panel ③.
- Clean all parts thoroughly.

Clean the lower panel by hand only using warm water and dish detergent.
All other parts are dishwasher-safe.

- Clean the inside of the appliance underneath the drip tray.
- Reassemble all parts and place the drip tray back in the coffee machine.

Make sure the drip tray has been pushed into the appliance as far as it will go.

- Make sure that the drip tray cover is correctly installed (see illustration).
- Clean the area under the coffee machine. Water can get under the appliance when the drip tray is removed.

Cleaning the water container

Clean the water container every day. You can clean the water container in the dishwasher once a week.

Make sure that the valve, the underside of the water container, and the surface the water container sits on are clean. Otherwise the water container will not sit correctly.

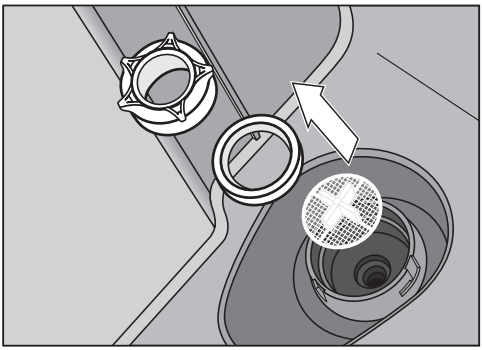

- Remove the water container.
- The water container can be cleaned in the dishwasher, or by hand using warm water and dish detergent. After cleaning, dry the water container.
- Carefully clean and dry the surface the water container sits on in the coffee machine, particularly the recesses.
- Reinsert the water container.

Removing and cleaning the water container filter

Clean the water container filter once a month.

The water container filter is located under the water container.

- Remove the water container.

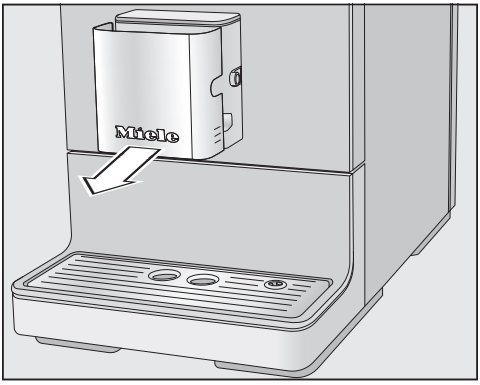

- Unscrew the cap. Remove the sealing ring and the filter.
- Rinse all parts carefully under running water.
- Then replace the water container filter (with the cross facing upwards) and then the sealing ring. Finally screw the cap back on tightly.
- Replace the water container.

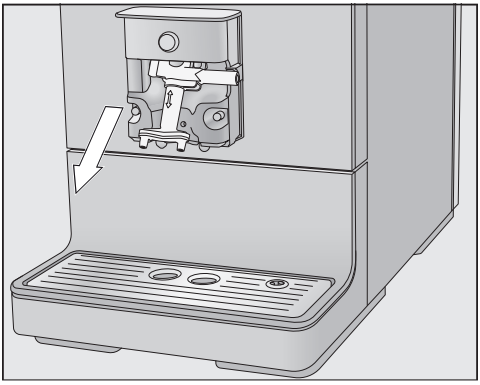

Central spout

Clean the central spout's stainless steel cover **by hand only**, using warm water and a little dish detergent.

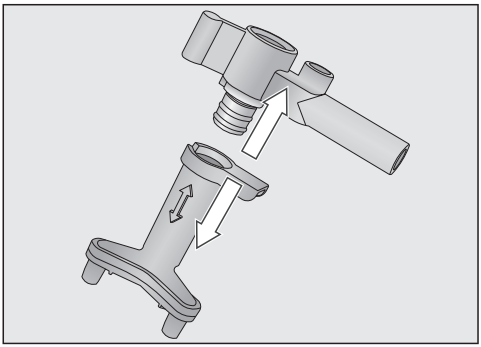

All other parts are dishwasher-safe.

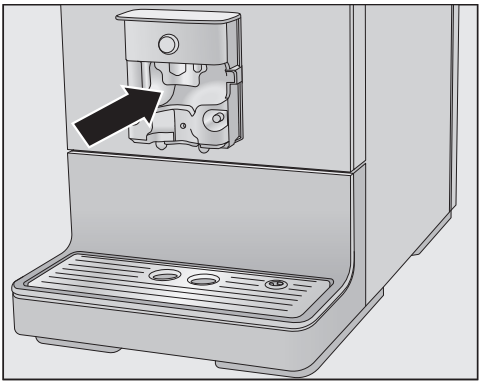

- Carefully pull the stainless steel cover off.

- Pull the dispensing unit down to remove it.

- Release the upper section with the holder for the milk pipework from the dispensing spouts.
- Clean all parts thoroughly.

- Clean the surfaces of the central spout and the dispensing spouts with a damp cloth.

Clean any blockages in the milk pipework under running water with the special brush supplied:

- Insert the brush in the pipework. Move it back and forth until all milk residue has been removed.

Reassembling the central spout

The dispensing unit is easier to reassemble if the individual parts are dampened with water beforehand.

- Reassemble the dispensing unit.
- Refit the dispensing unit onto the central spout. Press firmly to ensure the dispensing unit is securely fitted without any gaps.
- Replace the stainless steel cover and connect the milk pipework if required.

Milk pipework

⚠ Risk to health due to inadequate cleaning.
Milk naturally contains bacteria. Heat and moisture inside the coffee machine can cause these bacteria to multiply, e.g., milk residues can go off and pose a risk to health.
Clean all components in which milk is transported thoroughly on a regular basis.

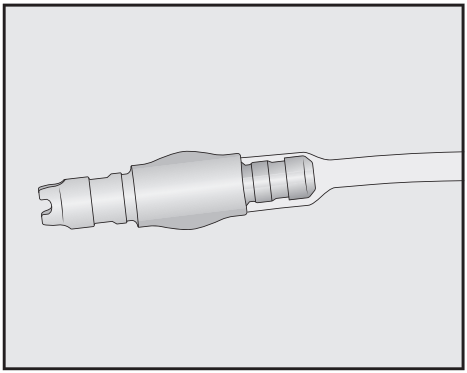

The coffee machine's milk pipework must be cleaned at least every 5 days.

There are two options for cleaning the milk pipework:

- You can remove and dismantle the central spout with its integrated Cappuccinatore and either wash it in the dishwasher or by hand with warm water and dish detergent (see "Central spout with integrated Cappuccinatore").
- Or you can clean the milk pipework using the Clean milk pipework maintenance program together with a cleaning agent for milk pipework (see "Maintenance programs – Cleaning the milk pipework").

Useful tip: In addition to your weekly cleaning routine, we recommend carrying out the alternative cleaning procedure once a month. For example, if you manually clean the machine once a week, then you should run the Clean milk pipework maintenance program once a month. This combination will ensure optimum cleaning of the milk pipework.

If you have released the connecting piece from the milk pipework: when reassembling, ensure that the smaller, thinner end of the connecting piece is pushed into the hose.

Bean container and ground coffee chute

⚠ Danger of injury from the grinder!
Switch off the coffee machine and remove the plug to disconnect it from the domestic electrical supply before cleaning the bean container.

Coffee beans contain oils which can deposit on the walls of the bean container and hinder the flow of the beans. Therefore, clean the bean container regularly with a soft, dry cloth.

- Open the bean container.
- Remove any coffee beans.

- Clean the bean container with a dry, soft cloth.

The bean container can now be refilled.

If necessary, clean the ground coffee chute:

- Open the ground coffee chute and remove any ground coffee residue.

Useful tip: Use a vacuum cleaner to remove any coffee residues from the bean container and the ground coffee chute.

Cleaning the housing

If soiling is allowed to stay for a long time or there is contact with unsuitable cleaning agents, surfaces can alter or discolour.

Remove any soiling immediately.

Ensure that any splashes of descaling solution are wiped up immediately.

- Switch the coffee machine off.
- Clean the appliance front with a clean soft sponge and a solution of warm water and dish detergent. Then wipe it all dry using a soft cloth.

Useful tip: You can also clean the housing with the Miele All-Purpose Microfibre Cloth.

Opening the Maintenance menu

You can find the maintenance programs in the Maintenance menu. Carry out the relevant maintenance program when the prompt to do so appears in the display.

- Touch the ‣≡ sensor button.
- Select Maintenance and confirm with *OK*.

You can now select a maintenance program.

Rinsing the appliance

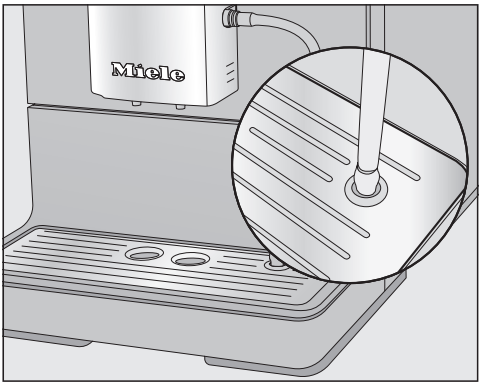

If you have made a coffee drink, the coffee machine will rinse the coffee pipework automatically before switching off. You can also start the Rinse appliance function manually.

Rinsing the milk pipework

The milk pipework can become blocked by milk residues. The milk pipework should therefore be rinsed regularly. If a drink has been made using milk, the prompt to place the milk pipework into the drip tray cover will appear at the latest when you switch the machine off.

You can also rinse the milk pipework manually.

- Touch the ‣≡ sensor button.
- Select Maintenance | Rinse milk pipework and confirm with *OK*.

- When prompted, place the milk pipework into the right-hand opening in the drip tray cover.
- Confirm with *OK*.

The milk pipework will now be rinsed.

Cleaning the milk pipework using the maintenance program

For optimum cleaning results, it is recommended to use the Miele Cleaning Agent for milk pipeworks. The cleaning agent for milk pipeworks has been specially developed for use with Miele Coffee Machines and prevents subsequent damage.

You can order the cleaning agent for milk pipework from the Miele online shop, from Miele Service, or from your Miele dealer.

The Clean milk pipework maintenance program lasts for approx. 10 minutes.

You need 1 stick of cleaning agent for milk pipework to clean it.

- Touch the ›≡ sensor button.
- Select Maintenance | Clean milk pipework.

The cleaning process cannot be cancelled. It must be completed through to the end.

- Confirm with *OK*.

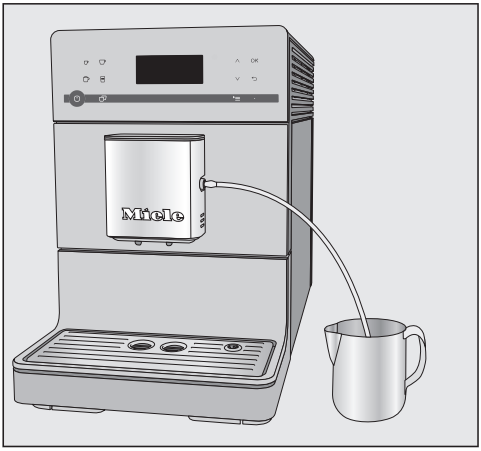

The process will start.

- Follow the instructions in the display.

Making a cleaning solution:

- Dissolve the cleaning agent in a container with 200 ml of lukewarm water. Stir the solution with a spoon until the powder has fully dissolved.

Carrying out the cleaning process:

- Place the container next to the coffee machine and hang the milk pipework in the solution. Make sure the milk pipework is placed sufficiently far into the cleaning solution.
- Confirm with *OK*.
- Follow the further instructions given in the display.

The cleaning process is finished at the end of the rinsing cycle.

Useful tip: Flush any residual cleaning agent out of the milk pipework with running water.

Degreasing the brew unit and cleaning the interior

Depending on the natural oil content of the coffee used, the brew unit can become blocked quite quickly. It must be degreased regularly in order to ensure aromatic coffee and trouble-free operation of the coffee machine.

It is recommended to use Miele Cleaning Tablets to clean the brew unit. These have been specially developed for degreasing the brew unit in Miele

Coffee Machines and prevent subsequent damage.
The cleaning tablets are available to order from the Miele online shop, from Miele Service, or from your Miele dealer.

The maintenance program for degreasing the brew unit lasts for approx. 15 minutes.

You need 1 cleaning tablet for the maintenance program.

After 200 portions have been dispensed, a message prompting you to degrease the brew unit will appear in the display.

■ Confirm the message with *OK*.

The message will appear at regular intervals. Once the maximum possible number of portions has been reached, the coffee machine will lock.

Degreasing the brew unit

No drinks can be made and Degrease the brew unit and clean the interior of the machine appears in the display.

> The cleaning process cannot be cancelled. It must be completed through to the end.

■ Confirm with *OK*.

The maintenance program will then start.

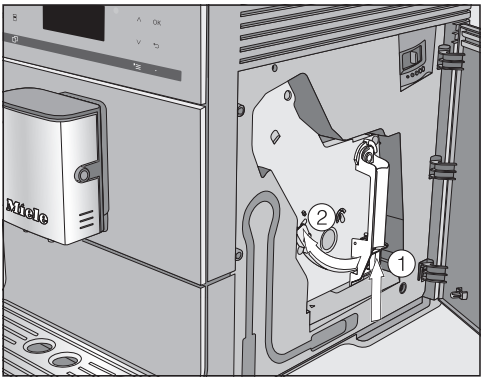

■ Follow the instructions in the display.

Cleaning the brew unit and interior

> Only clean the brew unit **by hand** with warm water. **Do not use any cleaning agents**. The moving parts of the brew unit are lubricated. Cleaning agents will damage the brew unit.
>
> To ensure good tasting coffee and to prevent a build-up of bacteria in the machine, remove and clean the brew unit under running water once a week.

Remove the brew unit. Clean the interior of the machine. Rinse the brew unit by hand and refit it with a cleaning tablet in it. will appear on the display.

■ Open the appliance door.

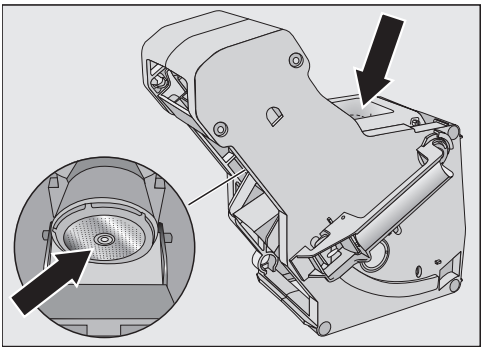

■ Press and hold the button under the brew unit handle ① and, whilst doing so, turn the handle to the left ②.

■ Carefully pull the brew unit out of the coffee machine.

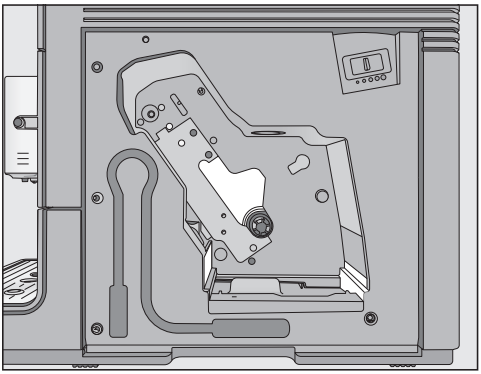

> When you have removed the brew unit, do **not** change the position of the handle on the brew unit.

■ Clean the brew unit **by hand under warm running water** without using cleaning agent or dish detergent.

- Wipe any remaining coffee off the filters (see arrows).
- Dry the funnel to prevent ground coffee from sticking to it the next time a coffee is made.

⚠ Risk to health due to inadequate cleaning.
Damp coffee residues in the interior of the machine can go mouldy and pose a risk to health.
Remove coffee residues regularly and clean the interior of the machine.

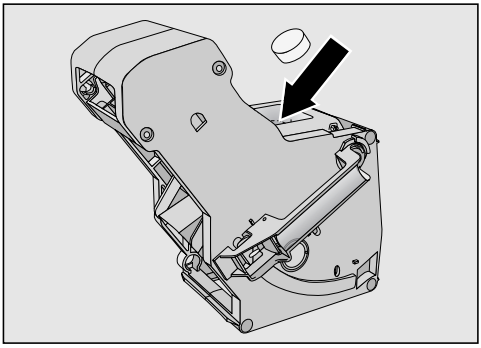

- Clean the interior of the coffee machine. Make sure that the areas highlighted in the illustration are cleaned especially well.

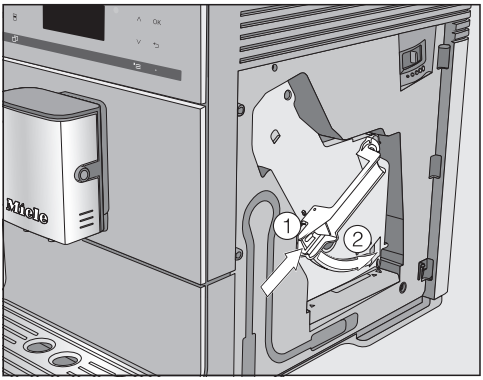

Useful tip: Use your vacuum cleaner to remove dry ground coffee residues.

Dropping a cleaning tablet into the brew unit

Insert the brew unit containing tablet will appear on the display.

- Drop a cleaning tablet into the top of the brew unit (arrow).
- Push the brew unit containing the cleaning tablet back into the coffee machine.

- Press the button under the handle of the brew unit ① and, whilst doing so, turn the handle to the right ②.
- Close the appliance door.
- Follow the further instructions given in the display.

The cleaning process is complete when the drinks menu appears.

Descaling the appliance

Risk of damage from splashes from the descaling solution.
Sensitive surfaces and / or natural floors can suffer damage.
Wipe up any spillages immediately when descaling.

Limescale builds up in the coffee machine through use. How often the appliance needs to be descaled will depend on the water hardness level in your area. Limescale must be removed regularly.

The appliance will guide you through the descaling process. Various messages will appear in the display, e.g., you will be prompted to empty the drip tray or fill the water container.

Descaling **must be carried out**. The process takes approx. 15 minutes.

The coffee machine will give you plenty of warning when it needs to be descaled. No. of uses until appliance needs descaling: 50 will appear in the display. The remaining number of drinks that can be made before descaling will show in the display after each drink.

■ Confirm the message with *OK*.

When the number of remaining portions reaches 0, the coffee machine will lock.

You can switch the coffee machine off if you do not want to carry out the descaling program at this point. You cannot make any drinks until the machine has been descaled.

Descaling after prompt appears in the display

Descale will appear on the display.

Descaling cannot be cancelled once it has started. It must be completed through to the end.

■ Confirm with *OK*.

The process will start.

■ Follow the instructions in the display.

When Fill the water container with descaling agent and lukewarm water up to the ⇄ symbol and replace. appears in the display, proceed as follows.

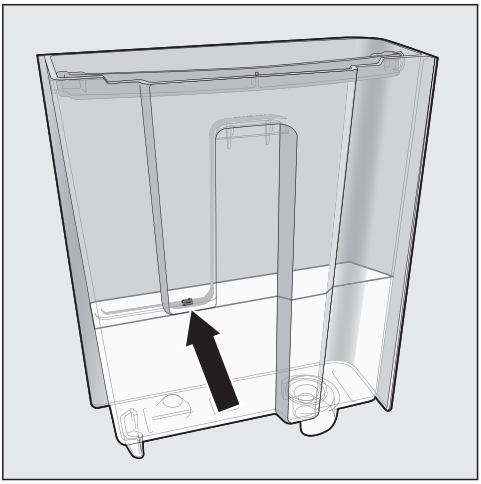

Preparing the descaling solution

For optimum descaling results, it is recommended to use the Miele Descaling Tablets.
The descaling tablets have been specially developed for Miele Coffee Machines.

Other descaling agents, which contain other acids besides citric acid and / or other undesirable substances, such as chlorides, may cause damage to the product. Moreover, the descaling result required cannot be guaranteed if the descaling solution was not of the appropriate concentration.

The descaling tablets are available to order from the Miele online shop, from Miele Service, or from your Miele dealer.

You will need **1** descaling tablet to descale the machine.

- Fill the water container to the ⇆ mark with lukewarm water.
- Add **1** descaling tablet to the water container.

Follow the instructions for the mixing ratio carefully. Fill the water container with the specified amount of water. Otherwise, descaling will be incomplete.

Carrying out descaling

- Reinsert the water container.
- Follow the further instructions given in the display.

When Rinse, refill and insert the water container. Close the door. appears in the display:

- Remove the water container and rinse it thoroughly with clean water. Ensure that **no** descaling solution residue remains in the water container. Fill the water container to the ⇆ mark with fresh tap water.

The descaling process is complete when the drinks menu appears.

Many malfunctions and errors that can occur in daily operation can be easily remedied. You can save time and money in many cases, as you do not need to contact Miele Customer Service.

Information to help you rectify malfunctions yourself can be found at www.miele.com/service.

The following tables are designed to help you to find the cause of a malfunction or an error and to resolve it.

Messages in the display

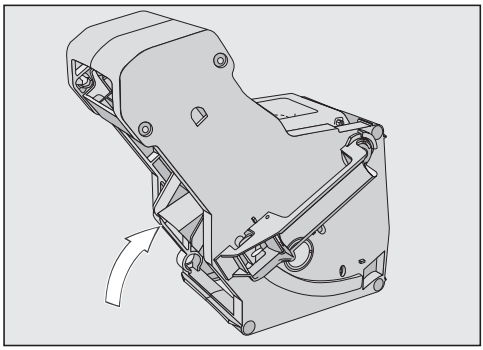

Fault messages must be confirmed with *OK*, otherwise the message may reappear in the display even though the problem has been remedied.

To address the fault, follow the instructions on the display.

If the fault message appears in the display again, contact Miele Service.

Problem	Possible cause and solution
F1, F2, F80, F82	There is an internal fault. ■ Switch the coffee machine off with the On / Off button ⏻. Wait for approximately one hour before switching the appliance back on again.
F41, F42, F74, F77, F235, F236	There is an internal fault. ■ Switch the coffee machine off with the On / Off button ⏻. Wait for approximately 2 minutes before switching the machine back on again.
F10, F17	No water or very little water is being drawn in. ■ Remove the water container. Fill the water container with fresh tap water and reinsert the water container. ■ Remove and clean the water container filter (see “Cleaning and care – Removing and cleaning the water container filter”).

Problem solving guide

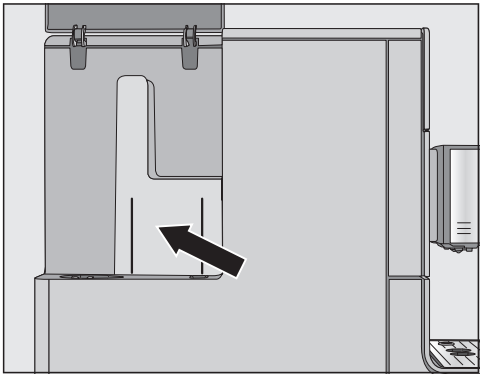

Problem	Possible cause and solution
F73 or Check the brew unit	The brew unit cannot be positioned correctly. ■ Switch the coffee machine off with the On / Off button ⏻. ■ Unplug the coffee machine from the socket. Wait for two minutes before inserting the plug back in the socket. ■ Remove the brew unit and rinse under running water.  ■ Push the coffee ejector of the brew unit into the correct position. ■ Do not insert the brew unit. Close the appliance door and switch the coffee machine on with the On / Off button ⏻. This will initialize the brew unit drive and put it back into the start position. ■ When Insert the brew unit appears in the display, put the brew unit back in the appliance. Close the appliance door.

Problem	Possible cause and solution
Too much ground coffee	There is too much ground coffee in the coffee chute. The brew unit cannot compact ground coffee if more than two level spoonfuls of ground coffee are added to the coffee chute. The ground coffee will be emptied into the grounds container and the fault message will appear in the display. ■ Switch the coffee machine off with the On / Off button ⏻. ■ Remove and clean the brew unit by hand (see “Degreasing the brew unit and cleaning the interior”). ■ Remove the ground coffee inside the coffee machine, e.g., with a vacuum cleaner. ■ Place a maximum of **12 g** of coffee in the ground coffee chute.

Problem solving guide

Unusual performance of the coffee machine

Problem	Possible cause and solution
The display remains dark when the coffee machine is turned on using the On / Off button ⏻.	The On / Off button ⏻ was not held for long enough. ■ Touch and hold the On / Off button ⏻ for at least 3 seconds.
	The plug is not inserted in the socket correctly. ■ Insert the plug into the socket.
	The circuit breaker has tripped because the coffee machine, voltage, or another appliance is defective. ■ Unplug the coffee machine from the socket. ■ Contact a qualified electrician or Miele Service.
The coffee machine turns off suddenly.	The factory-set switch-off time (20 minutes) or the switch-off time you have programmed has been reached. ■ If required, you can select a new switch-off time (see “Settings – Timer”).
	The plug is not inserted in the socket correctly. ■ Insert the plug into the socket.
The sensor buttons do not respond. The coffee machine can no longer be operated.	There is an internal fault. ■ Disconnect the coffee machine from the domestic electrical supply by removing the plug from the socket or switching off the circuit breaker.
The display is hard to see or not legible.	The display brightness has been set too low. ■ Change this setting (see “Settings”).

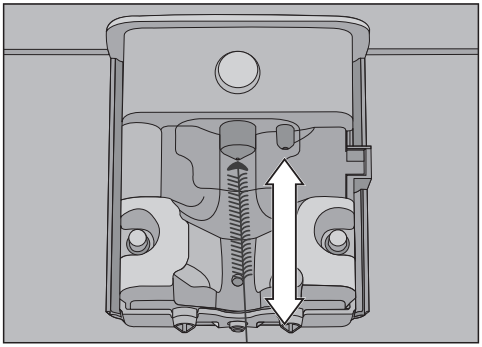

Problem	Possible cause and solution
The water container is empty. Fill and replace the water container **has not appeared in the display.**	Droplets of water have settled between the water container and the side walls of the housing, or this area is damp (see illustration).  ■ Dry the surfaces. Take the water container out to refill it with water.
	There is too much residual water on the inside walls of the water container, e.g., a biofilm has developed. Or the water container has a build-up of limescale. ■ Clean the water container every day.
Fill and replace the water container **appears in the display even though the water container is full and in the machine.**	The water container is not in the correct position. ■ Remove the water container and push it back in again.
	The water container was not correctly filled up and inserted during descaling. ■ Fill the water container to the descaling mark and restart the descaling program.
Fill and replace the water container **appears after switching on even though the container is filled and installed in the machine. The appliance does not rinse.**	The coffee machine needs descaling. ■ Switch the coffee machine off with the On / Off button. Wait approx. one hour. ■ Switch the appliance back on again. As soon as Heating-up appears, touch the sensor button and then select Descale. ■ Descale the coffee machine.

Problem solving guide

Problem	Possible cause and solution
After switching on the machine, the message Empty the drip tray and the waste container **appears even though they are both empty.**	This is not a fault. When the drip tray and grounds container are emptied, the internal counter is not reset after the coffee machine has been switched off. Empty the drip tray and the waste container appears in the display even though the drip tray and the grounds container are not filled to the maximum.
Neither milk nor milk froth comes out of the central spout.	The milk pipework is blocked. ■ Clean the central spout, taking particular care to clean the Cappuccinatore and milk pipework connections carefully with the cleaning brush.
Empty the drip tray and the waste container **appears in the display, even though the drip tray has been emptied.**	This is not a fault. The drip tray was not properly removed and / or replaced too quickly.
Empty the drip tray and the waste container **appears in the display even though both are installed.**	The drip tray is not correctly installed and is therefore not detected. ■ Empty the drip tray and grounds container. Reassemble all parts and push the drip tray back as far as it will go in the coffee machine.
The drip tray or the grounds container is too full or runs over although the drip tray and the grounds container were emptied after each message on the display.	This is not a fault. It is likely that the drip tray and grounds container were pulled out or the appliance door was opened without emptying the drip tray and grounds container. When the drip tray is pulled out or the appliance door is opened, the internal counter for emptying the drip tray and the grounds container is reset. ■ Remove the drip tray and grounds container from the machine and empty them.

Problem	Possible cause and solution
Fill the bean container **appears in the display even though the bean container has just been filled.**	This is not a fault. ■ Confirm the message with *OK*.
	Insufficient coffee beans are getting into the grinder. Have you used a dark roast? This type of coffee bean is often more oily. These oils can cling to the inside of the coffee bean container and hinder the flow of beans. ■ Make a coffee and observe whether the coffee beans drop into the coffee bean container. ■ Clean the coffee bean container more often if you are using darker, more oily coffee beans. Try other types of coffee bean which are less oily.
The coffee machine does not rinse itself when turned on.	This is not a fault. If the coffee machine is already at operating temperature, rinsing will not take place when the appliance is switched on.
Coffee dispensing is repeatedly interrupted and the message Fill the bean container **appears in the display.**	This is not a fault. The brew unit has not detected the ground coffee. Certain types of coffee produce a small amount of coffee when they are ground. Usually this is because the grinder is set too fine and the minimum quantity of coffee is set. ■ Confirm the message with *OK*. If the coffee is too strong for you or tastes bitter, try a different type of coffee bean. If the display appears with all types of coffee: ■ Set the grinder to a coarser setting (see “Grinder setting”). ■ Select a larger quantity of coffee. Don't forget to check any drinks changed in “Profiles”.
	If the message only appears when dispensing certain drinks: ■ Check the quantity of coffee set for this drink (see “Quantity of coffee”). Select a larger quantity of coffee. ■ You may also need to set a coarser grinder setting.

Problem solving guide

Problem	Possible cause and solution
The descaling process was started inadvertently.	The descaling program cannot be stopped once *OK* has been touched. It must now be completed through to the end. This is a security setting to fully descale the coffee machine. It ensures a long service life and that your coffee machine is functioning correctly. ■ Descale the coffee machine (see “Descaling the appliance”).
The milk sputters when it is dispensed. Hissing noises can be heard when milk is being heated up or frothed. Although the milk should be frothed, only hot milk comes out of the central spout.	The milk temperature is too high. Good milk froth can only be achieved with cold milk (below 10°C). ■ Check the temperature of the milk.
	The central spout with integrated Cappuccinatore is not correctly installed and is taking in air. Or the spouts are blocked. ■ Check whether the central spout has been assembled correctly. Make sure that all parts are tightly connected to one another. ■ If necessary, clean the central spout.
	The milk pipework, connections, or the intake tube on the milk flask are blocked. ■ Clean all parts thoroughly.
	The steam jet on the central spout has a blockage.  Push the cleaning brush a maximum of 1 cm into the steam jet. ■ Clean the steam jet with the cleaning brush.

Problem	Possible cause and solution
Coffee grounds have settled on the lid of the drip tray and in the interior around the brew unit.	This is not a fault. The movement of the brew unit during the brewing process can cause some ground coffee to fall around it. The type of beans used, the fineness of the ground coffee, and the quantity of coffee ground also affect the quantity. Important! Clean the inside of the coffee machine regularly to prevent mould, etc. Check whether the quantity of coffee is set too high.
The underside of the coffee bean container cover is very damp. Drops of water are visible.	A large number of drinks have been made one after the other and the ground coffee chute is not closed or not properly closed. Steam has risen up from the brew unit via the ground coffee chute and condensed under the cover. ■ Replace the lid on the ground coffee chute making sure it is properly sealed.
Water from making coffee has collected on the countertop underneath the coffee machine.	This is not a fault. Water can get under the appliance when the drip tray is removed. Clean the surface underneath the coffee machine regularly.
The display lights up but the coffee machine does not heat up and no drinks are made. The coffee machine cannot be turned off.	The demo mode for demonstrating the coffee machine in stores and showrooms has been activated. ■ Deactivate demo mode.

Problem solving guide

Unsatisfactory results

Problem	Possible cause and solution
The coffee is not hot enough.	The cup has not been pre-heated. The smaller the cup and the thicker its sides, the more important it is to pre-heat it. ■ Pre-heat the cup with hot water, for example.
	The brewing temperature is set too low. ■ Set a higher brewing temperature.
	The filters in the brew unit are blocked. ■ Remove the brew unit and clean it by hand. ■ Degrease the brew unit.
The heating-up time is getting longer. The amount of water being dispensed is incorrect and the coffee machine is not performing properly. Coffee drinks trickle / dribble slowly out of the central spout.	The coffee machine needs descaling. ■ Descale the coffee machine.
Coffee is not flowing out of the central spout. Or coffee is only being dispensed via one spout.	The central spout has a blockage. ■ Rinse the coffee pipework (see “Cleaning and care – Rinsing the appliance”). ■ If there is still no coffee coming out, or coffee is only coming out of one side, clean the dispensing spouts with the cleaning brush.
The consistency of the milk froth is unsatisfactory.	The milk temperature is too high. Good milk froth can only be achieved with cold milk (below 10°C). ■ Check the temperature of the milk in the milk flask.
	The milk pipework is blocked. ■ Clean the central spout and milk pipework with the brush.
The coffee grinder makes a louder noise than usual.	The coffee bean container has become empty during the grinding process. ■ Fill the coffee bean container with fresh beans.
	There may be foreign objects such as plastic or stones in amongst the coffee beans. ■ Switch the coffee machine off immediately. Contact the Service department.

Problem	Possible cause and solution
The coffee is dispensed too quickly into the cup.	The coffee is too coarsely ground. ■ Set the grinder to a finer setting (see “Grinder setting”).
The coffee is dispensed too slowly into the cup.	The brew unit is blocked. ■ Degrease the brew unit (see “Cleaning and care – Degreasing the brew unit and cleaning the interior”).
The crema on the coffee or espresso is not as it should be.	The coffee beans are no longer fresh. If roasted coffee beans are stored open for too long, the carbon dioxide gradually escapes from the coffee beans. The crema is no longer formed during dispensing. Of course, you can still use the coffee beans.

Transporting

If you are not going to use the coffee machine for a long period of time and want to transport it over long distances, you should prepare the appliance as follows:

- Empty and clean the coffee bean container.
- Empty and clean the water container.
- Evaporate the coffee machine.
- Clean the interior of the machine.
- Pack the machine securely.

Evaporating the coffee machine

The coffee machine should be evaporated before it is stored for a long period of time or transported any distance – particularly at temperatures below freezing.

Evaporating the appliance involves removing all traces of water from the system to prevent the risk of water and frost damage.

- Switch the coffee machine on with the On / Off button ⏻.
- Touch the ⮌ sensor button.
- Touch the 🗗 sensor button twice.

Evaporate will appear on the display.

- Select Yes and confirm with *OK*.
- Follow the instructions in the display.

⚠ Danger of burning and scalding on the dispensing spouts.
Hot steam can cause scalding.
Keep well away from the area underneath the spouts when hot liquids or steam are being dispensed.
Do not touch hot components.

The evaporation process is finished when Program finished appears in the display and the display then goes out.

- Switch off the coffee machine and unplug it to disconnect it from the domestic electrical supply.
- Clean the drip tray and grounds container.

Packaging

Always use a clean and dry appliance. Ground coffee residues can scratch the surfaces. In addition, coffee, milk, and water residues cause a build-up of bacteria.

Use the original packaging and Styrofoam pieces to pack the coffee machine.

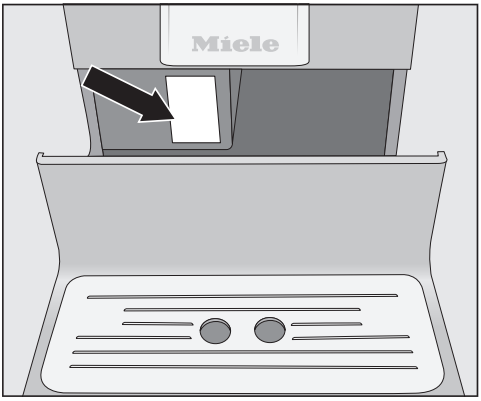

Keep the operating instructions in the box. This means that you have them to hand if you want to reuse the coffee machine.

Contact in the event of a fault

In the event of a fault which you cannot remedy yourself, please contact your Miele dealer or Miele Customer Service.

Contact information for Miele Customer Service can be found at the end of this document.

Please quote the model identifier and serial number of your appliance (SN) when contacting Miele Customer Service. This information can be found on the data plate.

Warranty

For further information, please refer to your warranty booklet.

Accessories

These products and other useful accessories can be ordered via the Miele online shop, from Miele Service, or from your Miele dealer.

Accessories supplied

- **Starter set “Miele appliance care”**
  Various cleaning products are supplied depending on model.
- **Cleaning brush**
  For cleaning the milk pipework

Optional accessories

Miele also offers a range of optional accessories, as well as cleaning and conditioning products for your coffee machine.

- **Milk pipework cleaner**
  For cleaning the milk system
- **Cleaning tablets**
  For degreasing the brew unit
- **Descaling tablets**
  For descaling the water lines
- **CJ Jug 1.0 l**
  Insulated flask for coffee or tea (pot function)
- **Milk flask with lid**
  For storing and preparing milk

Before connecting the coffee machine, make sure that the connection data on the data plate (voltage and frequency) matches that of the domestic electrical supply.
This data must match to prevent the coffee machine from being damaged. If in any doubt, consult a qualified electrician.

The required connection data is provided on the data plate. The data plate can be found on the left-hand side of the appliance when the drip tray is pulled out.

The appliance is supplied with a power supply cable ready for connection to a 120 V 60 Hz supply.

The coffee machine must be connected to the domestic electrical supply via a suitable earthed socket. The appliance must be connected to an electrical system designed in accordance with national regulations.

The fuse rating must be at least 15 A.

The socket should be next to the appliance and easily accessible where possible.

Do not connect the coffee machine to the domestic electrical supply using a multi-socket adapter or an extension cord. These do not guarantee the required safety of the appliance (risk of fire).

Do not connect the coffee machine to a **stand-alone inverter**. Stand-alone inverters are used for autonomous power supply, e.g., a solar power system. Power surges could trigger the safety shut-off function. This can damage the electronics.

The coffee machine must not be used with **energy-saving plugs**. These reduce the amount of energy supplied to the appliance, causing it to overheat.

If the power supply cable is faulty, it must only be replaced by a qualified electrician.

Installation information

⚠ Danger of overheating due to insufficient ventilation.
If the coffee machine is not sufficiently ventilated, the appliance can overheat.
Please ensure that there is adequate ventilation around the coffee machine.
Do not cover the coffee machine with dish towels, etc. while it is in use.

If the coffee machine is installed behind a closed cabinet door front, heat and moisture can build up behind the cabinet door front when closed. This can result in damage to the coffee machine and / or cabinetry.
Do not close the cabinet door while the coffee machine is in use.

Please observe the following installation instructions:

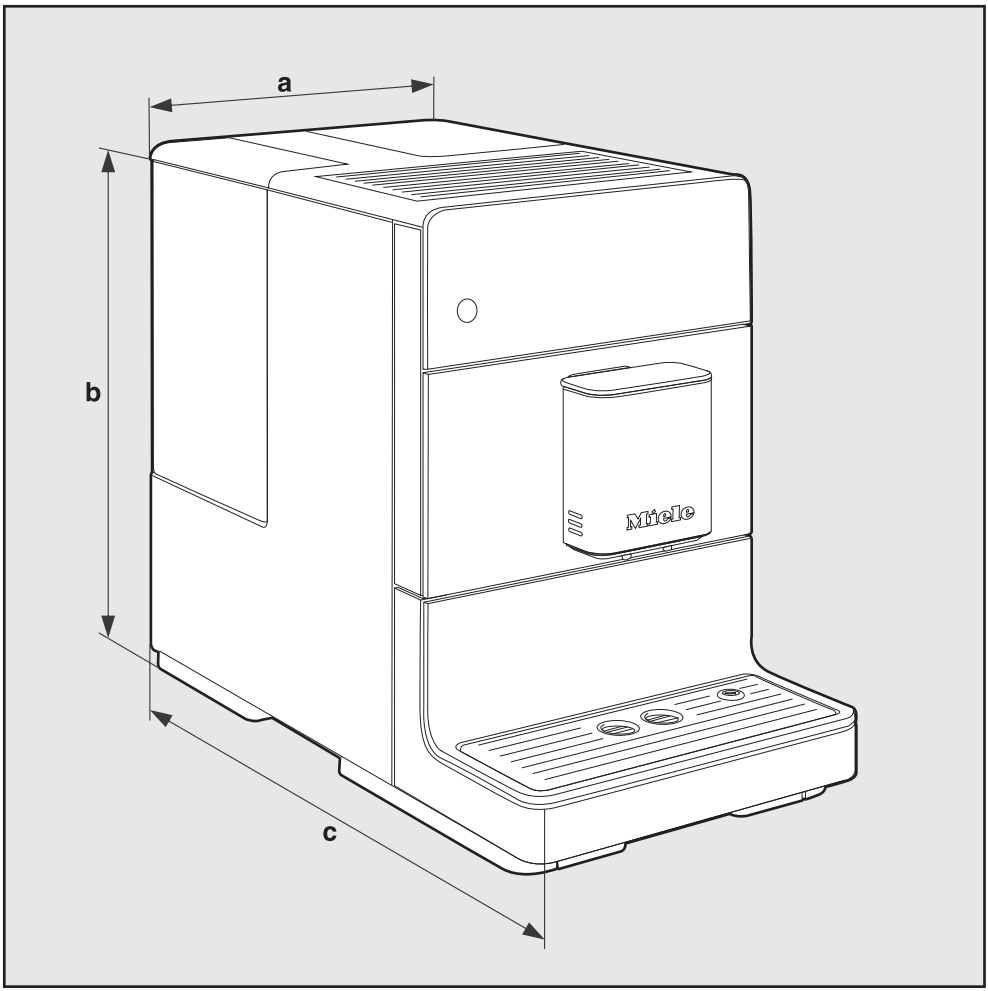

- The location of the appliance must be dry and well ventilated.
- The ambient temperature of the room in which the appliance is used must be between +50°F (10°C) and +100°F (38°C).
- The coffee machine must be set up on a level surface. The surface must be water resistant.

If the coffee machine is installed in a niche, the niche must provide the following minimum dimensions:

Height	20 1/16" (510 mm)
Width	17 11/16" (450 mm)
Depth	22 5/8" (575 mm)

When setting up the appliance: make sure that the appliance door can be fully opened so that the brew unit can be removed with ease when required.

■ The coffee machine must be set up in the niche such that it sits flush with its front edge.

a = 9 1/2" (241 mm)

b = 14 3/16" (360 mm)

c = 18 1/8" (460 mm)

Technical data

Electricity consumption in standby mode (default setting):	< 0,5 W
Pump pressure:	Max. 15 bar
Through-flow heater:	1 stainless steel thermo block
Dimensions (W x H x D):	241 x 360 x 460 mm
Net weight:	9,48 kg
Power supply cable length:	120 cm
Water container capacity:	1,3 l
Bean container capacity:	200 g
Waste container capacity:	Max. 7 portions of coffee grounds
Central spout:	Height adjustable from 80–135 mm
Grinder:	Conical steel grinder
Grinder setting:	Adjustable in 5 settings
Ground coffee amount:	Max. 12 g

Please have the model and serial number of your appliance available when contacting Customer Service.
