

Operating and installation instructions Cooker hood

To prevent the risk of accidents or damage to the appliance, it is **essential** to read these instructions before it is installed and used for the first time.

en-GB M.-Nr. 11 743 030

This cooker hood complies with all relevant local and national safety requirements. Inappropriate use can, however, lead to personal injury and material damage.

Read the operating and installation instructions carefully before using the cooker hood. They contain important information on its safety, installation, use and maintenance. This prevents both personal injury and damage to the cooker hood.

In accordance with standard IEC 60335-1, Miele expressly and strongly advises that you read and follow the instructions in the chapter on installing the appliance as well as the safety instructions and warnings.

Miele cannot be held liable for injury or damage caused by noncompliance with these instructions.

Keep these instructions in a safe place and pass them on to any future owner.

Correct application

- This cooker hood is intended for use in domestic households and similar working and residential environments.
- The cooker hood is not intended for outdoor use.
- It must only be used as a domestic appliance to extract vapours and remove odours from cooking.
- Any other usage is not supported by the manufacturer and could be dangerous.
- ▶ Where a recirculation cooker hood is fitted above a gas hob, please ensure that there is an adequate supply of fresh air into the room in which it is installed. Please seek the advice of a qualified gas fitter (e.g. GasSafe in the UK) for more information if necessary.

The cooker hood can only be used by people with reduced physical, sensory or mental capabilities, or lack of experience and knowledge, if they are supervised whilst using it, or have been shown how to use it in a safe way and recognise and understand the consequences of incorrect operation.

Safety with children

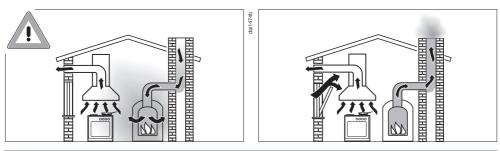

- ► Children under 8 years of age must be kept away from the cooker hood unless they are constantly supervised.
- ► Children aged 8 and older may only use the cooker hood without supervision if they have been shown how to use it and are able to do so in a safe manner. Children must be able to understand and recognise the possible dangers caused by incorrect operation.
- Children must not be allowed to clean or maintain the cooker hood unsupervised.
- ▶ Please supervise children in the vicinity of the cooker hood and do not let them play with it.
- ► The hob lighting is very intensive. Ensure, in particular, that babies/small children do not look at the light.
- ▶ Danger of suffocation! Whilst playing, children may become entangled in packaging material (such as plastic wrapping) or pull it over their head with the risk of suffocation. Keep packaging material away from children.

Technical safety

- ► Unauthorised installation, maintenance and repairs can cause considerable danger for the user. Installation, maintenance and repairs must only be carried out by a Miele authorised technician.
- A damaged appliance can be dangerous. Check it for visible signs of damage. Do not use a damaged appliance.
- The electrical safety of this appliance can only be guaranteed when correctly earthed. It is essential that this standard safety requirement is met. If in any doubt please have the electrical installation tested by a qualified electrician.
- ► Reliable and safe operation of this cooker hood can only be assured if it has been connected to the mains electricity supply.
- ► The connection data (voltage and frequency) on the data plate of the cooker hood must match the mains electricity supply in order to avoid the risk of damage to the cooker hood Compare this before connecting the appliance to the mains. Consult a qualified electrician if in any doubt.
- Do not connect the appliance to the mains electricity supply by a multi-socket unit or an extension lead. These are a fire hazard and do not guarantee the required safety of the appliance.

- For safety reasons, this appliance may only be used after it has been built in.
- The cooker hood must not be used in a non-stationary location (e.g. on a ship).
- Touching electrical components and tampering with electrical and mechanical parts is highly dangerous to the user and can cause operational faults.
- Only open the housing as described in the instructions given in the installation sheet and in the Cleaning and care section of this booklet. Under no circumstances should any other parts of the housing be opened.
- The manufacturer's warranty will be invalidated if the appliance is not repaired by a Miele authorised technician.
- Miele can only guarantee the safety of the appliance when genuine original Miele replacement parts are used. Faulty components must only be replaced by Miele spare parts.
- If the electrical connection cable is faulty it must only be replaced by a Miele authorised technician to protect the user from danger.
- During installation, maintenance and repair work, the appliance must be disconnected from the mains electricity supply.

Using at the same time as another heating appliance that depends on the air from the room

Danger of toxic fumes!

Great care should be taken when using the cooker hood in the same room or the same area of the house at the same time as another heating appliance that depends on the air from the room. Such heating appliances draw in air from the room and duct exhaust gases out through a chimney or extraction ducting. They include gas, oil, wood and coal-fired boilers and heaters, continuous flow or other water heaters, gas hobs and ovens.

The cooker hood draws in air from the kitchen and from neighbouring rooms. This applies to the following modes of operation:

- Extraction mode
- Recirculation mode with a recirculation box installed outside the room.

If there is insufficient air, negative pressure will occur. The heating appliance may be starved of oxygen. This impairs combustion. Harmful gases could be drawn from the chimney or extraction ducting back into the room.

Risk of death!

In order to ensure safe operation and to prevent gases given off by the heating appliance from being drawn back into the room when the cooker hood and the heater are both operated simultaneously, an underpressure in the room of 0.04 mbar (4 Pa) is the maximum permissible.

Sufficient ventilation can be maintained by air inlets which cannot be blocked, e.g. in windows, doors and outside wall vents. The cross-section of the inlet openings must enable sufficient ventilation. A ventilation brick alone is not generally sufficient to ensure safe ventilation.

The overall ventilation condition of the dwelling must be taken into account. If in any doubt, ask a competent building regulations inspector or qualified gas fitter (if appropriate).

If the cooker hood is being operated in recirculation mode, whereby the air is redirected into the room in which it is installed, the above restrictions do not apply.

Correct use

Open flames are a fire hazard.

The use of an open flame under the cooker hood is not permitted. To avoid the danger of fire, do not flambé or grill over an open flame. When switched on, the cooker hood could draw flames into the filter. Fat deposits could ignite, presenting a fire hazard.

- The cooker hood can become damaged when exposed to excessive heat.
 - When using the cooker hood over a gas hob, ensure that any burners in use are always covered by a pan. Switch the cooking zone off when a pan is removed, even for a short time.
 - Select a pan which is suitable for the size of the burner.
 - Regulate the flame so that it does not burn up the sides of the pan.
 - Avoid overheating the pan (e.g. when cooking with a wok).
- Always switch the cooker hood on when a cooking zone is in use, otherwise condensation may collect in the hood, which could cause corrosion.
- Overheated oil and fat can ignite, causing fire damage to the cooker hood.

When cooking with oil or fat, chip pans and deep fat fryers, etc, do not leave the pans unattended. Similarly, never leave an open grill unattended when grilling.

- Do not use the cooker hood without the filters in place. This way you will avoid the risk of grease and dirt getting into the appliance and hindering its smooth operation.
- The cooker hood can get very hot during cooking due to heat rising from the hob.

Do not touch the housing or the grease filters until the cooker hood has cooled down.

Proper installation

- ▶ Refer to the cooker or hob manufacturer's instructions as to whether a cooker hood may be operated above the cooker/hob.
- Safety regulations prohibit the fitting of a cooker hood over solid fuel stoves.
- An insufficient safety distance between the hob and the cooker hood can result in damage to the cooker hood.

The minimum safety distances between the top of the hob and the bottom of the cooker hood given in the "Installation" section of this manual must be observed, unless the hob manufacturer states that a greater safety distance is required.

If more than one cooking appliance is fitted beneath the cooker hood, and they have different minimum safety distances to the cooker hood, select the greater distance.

- The information provided in "Installation" must be observed when fixing the ventilation hood.
- Components can have sharp edges which may cause injury. Wear gloves to protect your hands from being cut.
- Exhaust ducting must be of non-inflammable material. Suitable material is available from Miele specialist dealers or the Miele Spares Dept.
- ▶ The appliance must not be connected to a chimney or flue which is in use. Neither should it be connected to ducting which ventilates rooms with fireplaces.

If exhaust air is to be extracted into a chimney or ventilation duct no longer used for other purposes, seek professional advice.

Cleaning and care

- There is a risk of fire if the cooker hood is not cleaned as described in these operating instructions.
- Do not use a steam cleaning appliance to clean this appliance. The steam could reach electrical components and cause a short circuit.

Accessories

Only use genuine original Miele accessories and spare parts with this appliance. Using accessories or spare parts from other manufacturers will invalidate the warranty and Miele cannot accept liability.

Caring for the environment

Disposal of the packing material

The packaging is designed to protect the appliance from damage during transportation. The packaging materials used are selected from materials which are environmentally friendly for disposal and should be recycled.

Recycling the packaging reduces the use of raw materials in the manufacturing process and also reduces the amount of waste in landfill sites.

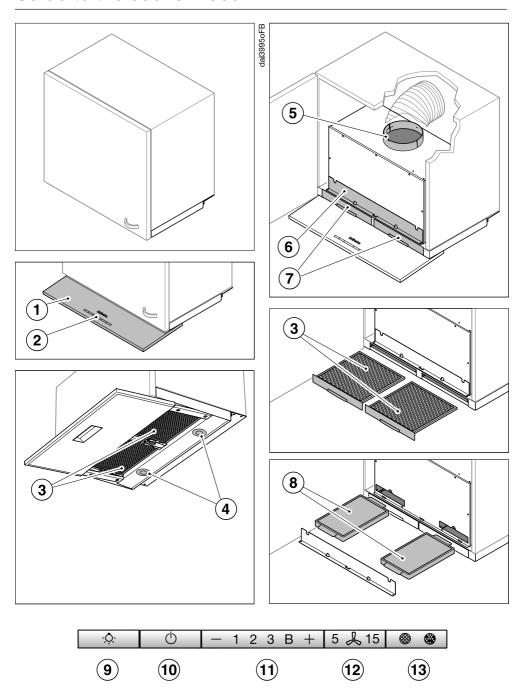

Disposing of your old appliance

Electrical and electronic appliances often contain valuable materials. They also contain specific materials, compounds and components, which were essential for their correct function and safety. These could be hazardous to human health and to the environment if disposed of with your domestic waste or if handled incorrectly. Please do not, therefore, dispose of your old appliance with your household waste.

Please dispose of it at your local community waste collection / recycling centre for electrical and electronic appliances, or contact your dealer or Miele for advice. You are also responsible for deleting any personal data that may be stored on the appliance being disposed of. Please ensure that your old appliance poses no risk to children while being stored prior to disposal.

Guide to the cooker hood

Guide to the cooker hood

- 1 Motorised retractable canopy
- 2 Control elements
- Grease filters
- 4 Hob lighting
- ⑤ Exhaust duct Exhaust air can be directed through the back of the cooker hood or upwards to the ceiling.
- 6 Slots for the charcoal filters
- Slots for the grease filters
- ® Charcoal filter Optional accessories for recirculation mode
- Control for switching the lighting on and off and for dimming the lighting
- 10 Control for the retractable canopy and for switching the fan on and off
- (1) Controls for setting the fan power level
- 12 Control for the run-on function
- (13) Control for the operating hours counter

Modes of operation

Depending on the model of the cooker hood, the following options are available:

Extraction mode

The air is drawn in and cleaned by the grease filters and directed outside.

Recirculation mode

Recirculation mode cooker hoods require a conversion kit and charcoal filters (see "Technical Data")

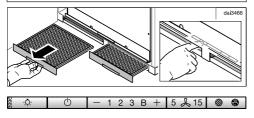

The air is drawn in and cleaned first by the grease filters and then by the charcoal filters. The cleaned air is then recirculated back into the kitchen.

dal0494b

Settings with the deflector plate retracted

The cooker hood must be switched off before activating settings. The deflector plate must be retracted. In order to reach the controls when the deflector plate is retracted please note the following:

■ Remove the grease filters.

The controls are accessible via the slots for the grease filters.

Selecting extraction mode or recirculation mode

The cooker hood is suitable for both extraction mode and recirculation mode. The power of the fan is adapted to suit the selected operating mode. The cooker hood is delivered set up for recirculation mode. It has to be reset for extraction mode.

To reset it for extraction mode, the operating hours counter for the charcoal filter(s) has to be deactivated.

- Switch off the fan and the lighting.
- Press the + control and the operating hours control at the same time.

The charcoal filter symbol and one of the fan power levels will flash.

- Press and hold the + control until the B indicator starts to flash.
- Confirm your choice with the operating hours control <a>る

All the indicator lights will go out.

Extraction mode has now been set.

If you do not confirm your selection within 4 minutes, the cooker hood will automatically revert to the original setting.

Setting up Miele@home

Requirements:

- Home WiFi network
- The Miele app
- A Miele user account The user account can be created via the Miele app.

Your cooker hood is equipped with an integrated WiFi module. The cooker hood can be connected to the household WiFi network.

You will then be able to operate the cooker hood via the Miele app.

If your Miele hob is connected to a home WiFi network, you can control the cooker hood automatically via the Con@ctivity function.

Before installing the cooker hood in its final location, ensure that the signal of your WiFi network is strong enough.

You can connect to the household WiFi network via the Miele app or via WPS.

Miele@home availability

The ability to use the Miele app depends on the availability of the Miele@home service in your country.

The Miele@home service is not available in every country.

For information about availability, please visit www.miele.com.

Miele App

The Miele App is available to download free of charge from the Apple App Store[®] or from the Google Play Store[™].

Connecting via the app

The Miele app can be used to connect to your network.

Install the Miele app on your mobile device.

For the registration, you will need:

- 1. Your WiFi network password
- 2. Your cooker hood password

The password for your cooker hood consists of the last 9 digits of the serial number. This can be found on the appliance's data plate.

The data plate is located on the casing of the cooker hood and is visible when the cover for the charcoal filter slots is removed.

■ Start signing the appliance on in the app. Follow the signing-on instructions.

If requested to activate WiFi on the cooker hood, proceed as follows:

■ Switch the cooker hood off.

■ Press and hold the + control.

■ Press the lighting control at the same time · ②.

2 will light up constantly, 3 will flash on and off.

The cooker hood will be ready for connection in the next 2 minutes.

■ Follow the instructions in the app.

When successfully connected, **2** and **3** will light up constantly.

■ Quit connection mode on the cooker hood by pressing the run-on control ⁵ ¹⁵.

The cooker hood can now be operated via the app.

Connecting via WPS

Your WiFi router must support WPS (WiFi Protected Setup).

Switch the cooker hood off.

■ Press and hold the + control.

■ Press the lighting control at the same time : ♦:

2 will light up constantly, 3 will flash on and off.

The WiFi connection must be started on the cooker hood at the same time as on the WiFi router.

■ Press the + control on the cooker hood after a few seconds.

After a short while the **2** will light up constantly, and the **3** and the **B** will flash on and off.

The cooker hood is ready for connection in the next two minutes.

Start the WiFi connection on your WiFi router.

When successfully connected the **2** and **3** will light up constantly.

■ Quit connection mode on the cooker hood by pressing the Run-on control 5 15.

The cooker hood can now be operated via the app.

If the connection fails, you have probably not connected WPS on your router quickly enough. Repeat the steps above.

Tip: If your WiFi router does not support WPS, please connect via the Miele app.

Sign out of WiFi (reset to factory settings)

To set up a new WiFi connection, the existing WiFi connection must be disconnected.

Switch the cooker hood off.

■ Press and hold the — control.

■ Touch the lighting control at the same time ·۞.

With an existing WiFi connection, **2** and **3** will light up constantly.

The cooker hood will be ready for disconnection in the next 2 minutes.

■ Touch the — control.

2 will light up constantly, 3 will flash on and off.

After a few seconds, **2** and **3** will flash on and off. The connection has now been disconnected.

■ Quit signing-off mode on the cooker hood by pressing the run-on control ⁵ ¹⁵.

The WiFi connection has now been disconnected. A new connection can now be set up.

Setting up Con@ctivity

Con@ctivity is the direct communication system between an electric Miele hob and a Miele cooker hood. It enables the cooker hood to operate automatically depending on the operational state of a Miele hob with onset controls.

- When the hob is switched on, the cooker hood lighting comes on automatically and then after a short time the fan also comes on.
- The cooker hood selects the power level automatically during cooking.
 The power level selected by the cooker hood depends on the number of cooking zones being used and their power levels.
- After switching the hob off the fan and the hob lighting will switch off automatically after a specified period of time.

See "Operation" for detailed information about this function.

Con@ctivity via the home WiFi network (Con@ctivity 3.0)

Prerequisite:

- Home WiFi network
- WiFi-enabled Miele hob
- Connect the cooker hood and hob to your home WiFi network (see "Setting up Miele@home").

The Con@ctivity function will be activated automatically.

Con@ctivity via a direct WiFi connection (Con@ctivity 3.0)

Prerequisite:

- WiFi enabled Miele hob

If you do not have a home network, you can establish a direct connection between the hob and the cooker hood.

See the Hob instruction manual for details on how to connect them.

Instructions on how to connect the cooker hood are repeated in detail below.

Switch the cooker hood off.

■ Press and hold the + control.

■ Press the — control at the same time.

2 will light up constantly, 3 will flash on and off.

The cooker hood will be ready for connection in the next 2 minutes.

Start WiFi connection on the hob. For further details, see the hob operating instructions.

When successfully connected, **2** and **3** will light up constantly.

■ Quit connection mode on the cooker hood by pressing the run-on control 5 15.

Con@ctivity has now been activated.

With a direct WiFi connection, it is not possible to connect the hob and the cooker hood to a home network. Should this be required at a later date, the WiFi connection between the hob and the cooker hood must be disconnected (see "Sign out of WiFi").

Operation (Automatic mode)

When Con@ctivity is active, the cooker hood always operates in automatic mode (see "Before using for the first time" – "Setting up Con@ctivity").

If you wish to manually operate the cooker hood, see "Operation (Manual mode)" – "Cooking without Con@ctivity".

Cooking with Con@ctivity (Automatic mode)

Switch a cooking zone on at the power level you want.

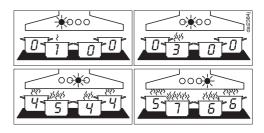

The hob lighting will come on.

After a few seconds the fan will come on, first at power level **2**, then it will switch immediately to power level **1**. The deflector plate will come out.

The cooker hood selects the power level automatically during cooking.

This is determined by the total output of the hob, i.e, the number of cooking zones in operation and the power levels selected.

- If you select a higher power level or are using several cooking zones, the cooker hood will switch to a higher power level.
- When you reduce the power level or the number of cooking zones on the hob, the cooker hood power level is also reduced.

Examples for power levels 1 to B

Reaction time

The cooker hood reacts with a slight delay because altering the power level on the hob does not immediately result in a reduction or increase in cooking vapours.

Because the hob transmits the information to the cooker hood at intervals, this can also cause delays.

The reaction can vary from a few seconds to a couple of minutes.

Operation (Automatic mode)

Cooking process

■ For example, you switch on a cooking zone at the highest power level to heat a pan for frying. You reduce the power level after approx. 10 seconds to 4 minutes (60 seconds to 5 minutes for a for a HiLight hob).

The cooker hood recognises a cooking process.

The cooker hood switches itself on and when the hob power level has been reduced, the hood switches to fan power level 3 and remains at that level for approx. 5 minutes.

After that, the cooker hood power level is determined automatically by the Con@ctivity function.

You can select another power level manually before then.

Switching off

■ Switch off all cooking zones.

The cooker hood fan will reduce its power level in stages over the next few minutes and will then switch itself off.

This helps to neutralise any lingering vapours and odours in the air.

- From the Booster setting, the fan switches immediately to Level 3.
- From Level 3, it will switch to Level 2 after approx. 1 minute.
- From Level 2, it will switch to Level 1 after 2 minutes.
- After 2 minutes at Level 1 the fan switches itself off. The deflector plate retracts.
- After another 30 seconds the lighting switches off.

The cooking process is then finished.

Operation (Automatic mode)

Leaving automatic mode temporarily

To leave automatic mode temporarily during cooking:

- manually select a different power level, or
- manually switch the cooker hood off, or
- activate the run-on function ⁵, ¹⁵ on the cooker hood. The fan will switch itself off after the selected run-on time, the deflector plate will retract and the lighting will remain on.

The cooker hood functions can now be operated manually (see "Cooking without Con@ctivity").

Returning to automatic mode

The cooker hood will resume automatic mode:

- If the cooker hood has not been used for approx. 5 minutes after selecting a fan power level manually, or
- If the manually selected fan power level corresponds to the automatic one again, or
- The cooker hood fan and the hob have been switched off for at least 30 seconds.

Automatic mode will resume next time the hob is switched on.

You can also operate the cooker hood manually for a complete cooking process.

Switch the cooker hood fan on before the hob.

If the cooker hood fan and the hob have been switched off for at least 30 seconds after cooking, automatic mode will resume next time the hob is switched on.

Operation (Manual mode)

Cooking without Con@ctivity (Manual mode)

The cooker hood can be operated manually if:

- The Con@ctivity function is not activated.
- You have temporarily deactivated the Con@ctivity function (see "Operation (Manual operation)" – "Leaving automatic mode temporarily").

You can operate the cooker hood manually via the Miele app.

You must have Miele@home set up in order to use the Miele app (see "Before using for the first time" – "Setting up Miele@home").

Switching the fan on and off ()

Switch the fan on as soon as you start cooking. This is to ensure that vapours are captured right from the start.

The deflector plate extends. The fan will come on at power level **2**.

If you switch the fan off, the deflector plate will retract.

Selecting the power level

For light to heavy cooking vapours and odours, select from power levels 1 to 3.

For short periods of cooking food with intensive vapours and a strong aroma, e.g. when searing meat, select Booster setting **B**.

Reducing power down from the Booster setting

If power management is activated (default setting), the fan automatically switches back to level **3** after 5 minutes.

Selecting the run-on time 5415

It is advisable to run the fan for a few minutes after cooking has finished. This helps to remove any lingering vapours and odours from the air.

It also reduces the risk of residues accumulating in the cooker hood and any resultant odours.

The run-on function enables the fan to continue running for a pre-determined time before switching itself off automatically.

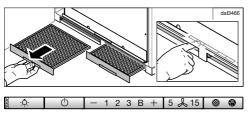

Dimming/switching the hob lighting on/off ∴

The hob lighting can be switched on and off and dimmed independently of the fan.

Operation (Manual mode)

Operating the appliance without the Miele app

If you want to operate the switched-on cooker hood without the Miele app – for example, if the WiFi connection is interrupted – you can do this on the cooker hood control panel.

If you want to switch on the cooker hood without the Miele app, remove the left-hand grease filter.

The controls can now be accessed through the grease filter slot.

■ Press the On/Off control ①.

The deflector plate extends. The fan will come on at power level **2**.

■ Replace the grease filter.

Power management

The cooker hood is fitted with a power management system. Power management helps to save energy. The fan power level is reduced automatically. It is used for switching off the lighting, reducing the fan power level and retracting the canopy automatically when the hood is no longer being used.

- If the Booster setting has been selected, the fan will automatically switch to level 3 after 5 minutes.
- If the cooker hood is switched on but has not been used for 2 hours, the power will be reduced by one level at a time in 30 minute stages until the fan finally switches off. The deflector plate retracts.
- The hob lighting will switch off automatically after 12 hours.

Energy saving tips

This cooker hood operates very efficiently and economically. The following will help you to save even more energy when using it:

- Ensure that there is sufficient ventilation in the kitchen when cooking. In extraction mode, if there is insufficient air flow the cooker hood cannot operate efficiently and this causes increased operating noise levels.
- Always cook with the lowest possible setting. This produces fewer cooking vapours, so you can use a lower cooker hood power level and therefore benefit from reduced energy consumption.
- Clean or change the filters at regular intervals. Heavily soiled filters reduce performance, increase the risk of fire and are unhygienic.

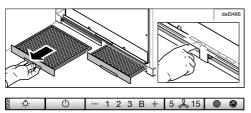

- Use the Con@ctivity function. The cooker hood will switch on and off automatically at the optimum power level for the cooking you are doing, which ensures low energy consumption.
- If you are operating the cooker hood manually, please note the following:
 - Check the power level selected on the cooker hood. A low power level is usually sufficient. Only use the Booster setting when necessary.
 - When a large volume of cooking vapours are being produced, switch to a high power level in good time. This is more efficient than operating the cooker hood for longer to try to capture cooking vapours which have already been distributed throughout the kitchen.
 - Make sure that you switch the cooker hood off after use.
 If cooking vapours and odours still need to be removed from the kitchen air after cooking, use the run-on function. The fan will switch off automatically after the selected run-on time.

Changing settings

You can adjust the cooker hood settings using the controls on the cooker hood.

The settings described in this chapter cannot be adjusted via the Miele app.

Switch the cooker hood off. The deflector plate must be retracted.

■ Remove the grease filters.

The controls are accessible via the slots for the grease filters.

Altering the operating hours counter for the grease filter(s)

You can set the operating hours counter to suit the type of cooking you do.

The factory default setting is a cleaning interval of 30 hours.

- Select a shorter time of 20 hours if you fry a lot.
- If you only cook occasionally, we recommend that you still select a short time. This is to prevent grease hardening on the filter(s) and making cleaning more difficult.
- Select a longer time of 40 or 50 hours if you use very little fat for cooking.
- Switch off the fan and the lighting.
- Press the run-on 5 ♣ 15 control and the operating hours control at the same time.

The Grease filter symbol 🚳 and one of the fan power level indicators will flash.

Fan power level indicators **1** to **B** show the time set:

- 1
 20 hours

 2
 30 hours

 3
 40 hours

 B
 50 hours
- Press the control for a shorter duration, or + for a longer duration.

All the indicator lights will go out.

If you don't confirm your selection within 4 minutes, the cooker hood will automatically revert to the original setting.

Altering or deactivating the charcoal filter operating hours counter

Charcoal filters are needed for recirculation mode.

You can set the operating hours counter to suit the type of cooking you do.

It has to be deactivated for extraction mode.

It is set at the factory for 180 hours of use before the filters need replacing.

- Switch off the fan and the lighting.
- Press the + control and the operating hours control at the same time.

The charcoal filter symbol and one of the fan power levels will flash.

Fan power level indicators **1** to **B** show the time set:

Indicator 1	. 120 hours
Indicator 2	. 180 hours
Indicator 3	. 240 hours
Indicator B	deactivated

- Select the duration you want with the + or control.
- Confirm your choice with the operating hours control ⊕.

All the indicator lights will go out.

If you do not confirm your selection within 4 minutes, the cooker hood will automatically revert to the original setting.

Deactivating power management

Keep in mind that deactivating this function may increase energy consumption.

Activating/deactivating Power Management

- Switch off the fan and the lighting.
- Press the fan run-on control ⁵♣¹⁵ for approx. 10 seconds until the indicator for fan power level **1** lights up.
- Then press in turn:
- the lighting control \$\tilde{\Pi}\$,
- the control, and then

If Power Management is activated, the **1** and **B** indicators light up constantly. When it is deactivated, the **1** and **B** indicators flash.

■ Press the — control to deactivate Power Management.

The **1** and **B** indicators will flash.

Press the + control to activate Power Management.

The **1** and **B** indicators will light up constantly.

■ Confirm the setting with the run-on option control ⁵♣¹⁵.

All the indicator lights will go out.

If you do not confirm your choice of setting within 4 minutes, the cooker hood will revert to the old setting.

/!\ Before proceeding with any maintenance or cleaning task, the cooker hood must be disconnected from the power supply (see "Warning and Safety instructions").

Housing

General information

Unsuitable cleaning agents can damage the surfaces and control elements.

Do not use any cleaning agents containing soda, acid, chloride or solvent.

Do not use any abrasive cleaning agents, e.g. powder cleaners or cream cleaners and abrasive sponges, as well as pot scourers or sponges which have been used previously with abrasive cleaning agents.

/!\ Moisture in the cooker hood can cause damage.

Make sure that water does not get into the cooker hood.

- All external surfaces and control elements can be cleaned using hot water with a small amount of washing-up liquid applied with a well wrung-out soft sponge or cloth.
- After cleaning, wipe the surfaces dry using a soft cloth.

Important information for appliances with stainless steel surfaces

This information does not apply to the control buttons.

Stainless steel surfaces can be cleaned with a non-abrasive cleaning agent designed specifically for use on stainless steel.

To prevent the surfaces from quickly becoming dirty again, we recommend treating them with a stainless steel care product (available from Miele).

Important information for the control elements

If soiling is not removed promptly, it could cause the control elements to alter or discolour.

Remove any soiling immediately.

The surface of the control elements can become damaged if they are cleaned using stainless steel cleaning agents.

Do not use stainless steel cleaning agents on the control elements.

Operating hours counter

The cooker hood registers the length of time for which it has been operated.

The Miele app communicates the number of elapsed operating hours and informs you when the filters need to be cleaned or replaced.

At the same time, the grease filter @ or charcoal filter symbols light up on the cooker hood control elements.

You can set the interval on the operating hours counters to suit the type of cooking you do (see "Changing settings").

Grease filters

Oversaturated grease filters are a fire hazard.

Clean the grease filters at regular intervals.

The re-usable metal grease filters in the appliance remove solid particles (grease, dust, etc.) from the kitchen vapours, preventing soiling of the cooker hood.

The grease filters must be cleaned at regular intervals.

Heavily soiled grease filters hinder air extraction and will lead to increased levels of soiling in the cooker hood and in the kitchen.

Cleaning interval

Accumulated grease solidifies over a longer period of time and makes cleaning more difficult. The grease filters should therefore be cleaned every 3 to 4 weeks.

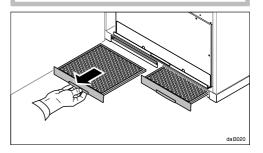

The operating hours counter reminds you to clean the grease filters regularly (see "Cleaning and care" – "Operating hours counter").

Removing a grease filter

Mhen handling a grease filter, be careful not to drop it.

This can result in damage to the filter and the hob below.

Make sure you hold the filter securely at all times when handling it.

Remove the grease filters from the slots on the front of the housing

Cleaning the grease filters by hand

Clean the filters with a soft nylon brush in a mild solution of hot water and a small amount of washing-up liquid. Do not use "neat" washing up liquid.

Unsuitable cleaning agents

Unsuitable cleaning agents can cause damage to the surface of the filters if used regularly.

Do not use:

- cleaning agents containing descaling agents
- powder cleaners, cream cleaners
- aggressive multi-purpose cleaning agents or spray cleaners for grease
- oven sprays

Cleaning the grease filters in the dishwasher

- Place the grease filters upright or slightly inclined in the lower basket. Ensure the spray arm is not obstructed.
- Use a commercially available household dishwasher detergent.
- Select a dishwasher programme with a wash temperature between 50 °C and 65 °C.

Depending on the detergent used, cleaning the filters in a dishwasher may cause the inside filter surfaces to become discoloured. This will not affect the functioning of the grease filters in any way.

After cleaning

- After cleaning, leave the filters to dry on an absorbent surface before replacing them.
- When removing the filters for cleaning, also clean off any residues of oil or fat from the now accessible housing to prevent the risk of these catching fire.
- Refit the grease filters.

Resetting the grease filter operating hours counter

After cleaning, the operating hours counter needs to be reset via the controls on the cooker hood.

■ With the fan switched on, press the operating hours control ��� for approximately 3 seconds until only 1 is flashing.

The grease filter symbol ⊗ goes out.

If you want to clean the grease filters before the operating hours counter has reached its maximum.

 ■ Press the operating hours control for approximately
 6 seconds until only 1 is flashing.

Charcoal filters

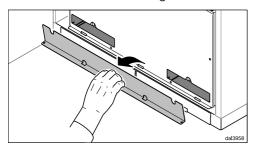

With recirculation mode, two charcoal filters must be fitted in addition to the grease filters. These are designed to absorb cooking odours.

Charcoal filters are available to order via the Miele Webshop, the Miele Spare Parts Department (see end of this booklet for contact details) or from your Miele dealer.

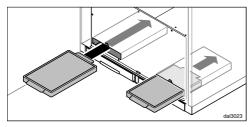

The type of charcoal filter required is listed under "Technical data" at the back of this booklet.

Fitting/replacing charcoal filters

The slots for the charcoal filters are located above above the grease filters.

- Remove the cover. It is held in position by magnets.
- Take the charcoal filters out of their packaging.

- Insert the charcoal filters in the slots.
- Replace the cover.

When to change the charcoal filters

Replace the charcoal filters when they no longer absorb kitchen odours effectively, and at least every 6 months.

The operating hours counter reminds you to replace the charcoal filters regularly (see "Cleaning and care" – "Operating hours counter").

Resetting the charcoal filter operating hours counter

After the charcoal filters have been replaced, the operating hours counter needs to be reset on the cooker hood controls

With the fan switched on, press the operating hours control twice, then hold it for approximately 3 seconds until only 1 is flashing.

The charcoal filter symbol will go out.

If you want to replace the charcoal filters **before** the operating hours counter has reached its maximum:

■ Press the operating hours control twice and hold it for approximately 6 seconds until only 1 is flashing.

Disposing of charcoal filters

Used charcoal filters can be disposed of with normal household waste.

Service

Contact in the event of a fault

In the event of any faults which you cannot remedy yourself, please contact your Miele dealer or the Miele Customer Service Department.

You can book a Miele Customer Service Department call-out online at www.miele.com/service.

Contact information for the Miele Customer Service Department can be found at the end of this document.

Please quote the model identifier and serial number of your appliance (Fabr./SN/Nr.) when contacting the Miele Customer Service Department. This information can be found on the data plate.

Please note that telephone calls may be monitored and recorded for training purposes and that a call-out charge will be applied to service visits where the problem could have been resolved as described in this booklet.

Position of the data plate

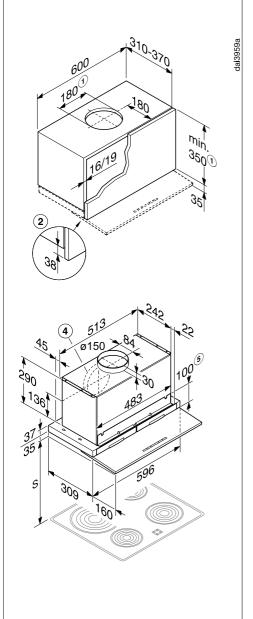

The data plate is located on the casing of the cooker hood and is visible when the cover for the charcoal filter slots is removed.

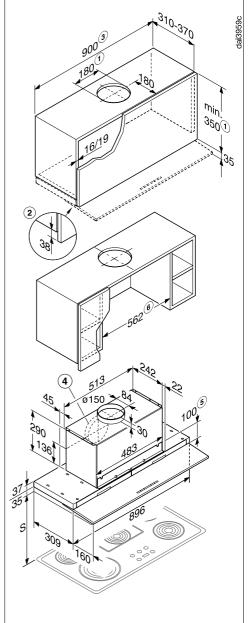

Warranty

For information on the appliance warranty specific to your country please contact Miele. See back cover for address.

In the UK, your appliance warranty is valid for 2 years from the date of purchase. However, you must activate your cover by calling 0330 160 6640 or registering online at www.miele.co.uk.

Appliance dimensions

DA 3668 DA 3698

37

- 1 Extraction, recirculation with conversion kit DUU 150.
- ② The wall unit carcase needs to be 38 mm shorter than the wall unit door.
- ③ Installation is also possible in a 600 mm wide cabinet. The following should be noted:
 - The adjoining units must also be shortened by 38 mm.
 - The doors of the housing unit and of adjoining units must open upwards so that the grease filters are accessible.
- 4 Alternative ducting connection at the back.
- (5) Wall unit can be fitted with partition wall after installation. Slots for the grease filters, and with recirculation mode for the charcoal filters, must remain accessible.
- 6 Alternatively the wall unit can be fitted with side sections.

The height of the wall unit and cut-out dimensions must take account of any accessories fitted, e.g. silencer, DSM module.

Safety distance between hob and cooker hood (S)

When planning the installation height of your cooker hood, the minimum safety distance between the top of a cooker or hob and the bottom of the cooker hood is as follows, unless a greater distance is specified by the manufacturer of your cooking appliance.

See "Warning and Safety" instructions for further information.

Cooking appliance	Minimum distance S
Electric hob	450 mm
Electric grill, deep fat fryer (electric)	650 mm
Multi-burner gas hob, total output ≤ 12.6 kW, no burner > 4.5 kW	650 mm
Multi-burner gas hob, total output > 12.6 kW and ≤ 21.6 kW, no burner > 4.8 kW.	760 mm
Multi-burner gas hob, total output > 21.6 kW, or multi-burner gas hob where one burner > 4.8 kW.	Not possible
Single burner gas hob, output ≤ 6 kW.	650 mm
Single burner gas hob, output > 6 kW and ≤ 8.1 kW.	760 mm
Single burner gas hob, output > 8.1 kW	Not possible

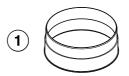

Before installation

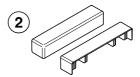

Before installation, it is important to read the information given on the following pages as well as the "Warning and Safety instructions" at the beginning of this booklet.

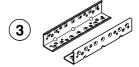

Installation recommendations

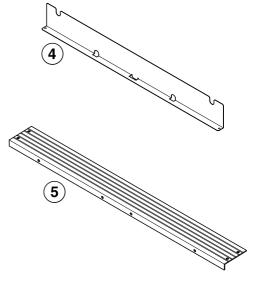

- To achieve optimum vapour extraction, the cooker hood must be positioned centrally over the hob, not to the side.
- The hob should be no wider than the cooker hood, and if possible, it should be narrower.
- The installation area must be easily accessible. The cooker hood should be easily accessible and easy to dismantle in the event that service is required. This should be taken into consideration when planning the position of cupboards, shelves, ceilings or features in the vicinity of the cooker hood.

Installation materials

da5040

- 1 1 exhaust duct for vent ducting Ø 150 mm.
- 2 covers for the brackets.
- 3 2 brackets to support the appliance in the wall unit.
- (4) **1 cover** for the charcoal filter slots.
- (5) **1 spacer strip** to conceal the gap between the rear of the appliance and the wall.

12 screws 4 x 15 mm for securing the cooker hood into the wall unit.

4 screws M4 x 16 mm for securing the cooker hood to the brackets and for securing the spacer strip.

4 screws M4 x 8 mm for securing the spacer strip.

2 screws 4 x 40 mm, 2 plugs 6 x 36 mm for securing the cooker hood to the wall (only when fitting into a 900 mm wide cabinet).

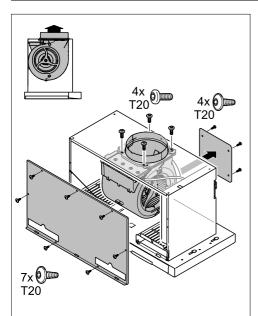

4 screws 4 x 25 mm for securing a 900 mm wide cooker hood.

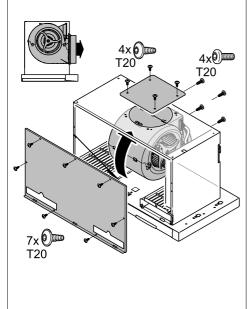

4 adhesive labels to conceal the fixing holes which are not required.

1 x T 20 angled screwdriver

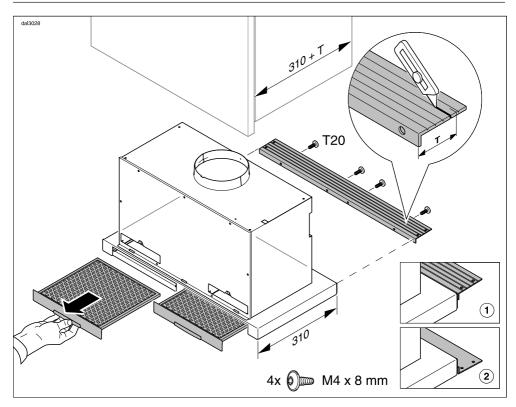

Repositioning the ducting connection

The fan can be rotated to allow the ducting to be fitted at the back of the cooker hood. This may be necessary if the cooker hood is being fitted in a reduced height wall unit, for example. Repositioning is carried out before installing the cooker hood.

The cooker hood must be disconnected from the mains.

- Undo the fixing screws on the front panel of the cooker hood housing and remove the panel.
- Undo the screws from the cover on the back of the cooker hood housing and remove the cover.
- Unscrew the fixing screws on the fan unit.
- Turn the fan unit towards the rear and position the exhaust socket in the cut-out in the back panel of the cooker hood housing. Ensure when turning the motor unit that the connection cable does not become detached.
- Secure the fan in its new position.
- Now secure the cover taken from the back panel to the top of the housing.
- Refit the front panel and secure it using the screws.

dal3029a

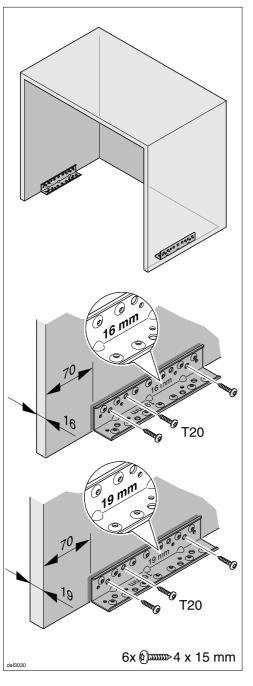

Pull the grease filters out of the slots in the front of the cooker hood housing.

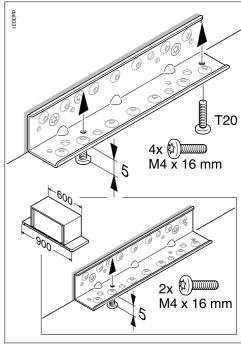

The spacer strip needs to be attached to the back of the cooker hood housing before the cooker hood is installed in the wall unit. The spacer strip can be attached to the upper ① or lower edge ② of the deflector plate.

- Calculate the measurement T for the spacer strip
- Cut the spacer strip to measurement T. Score along the groove for the smaller measurement as shown, and remove the surplus.

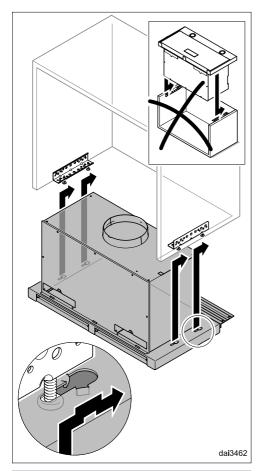

■ Screw the spacer strip to the back of the cooker hood at the required position. Use the screws supplied. To attach the spacer strip to the lower edge ② use the screws previously removed from the housing unit.

■ Screw the brackets onto the right and left inside walls of the housing unit so that they are flush with the bottom edges of the unit. The brackets are designed for 16 and 19 mm thick unit sides. Orientate the bracket so that the vertical depth matches the thickness of the unit side, as shown.

■ Fit the screws for attaching the cooker hood so that they protrude by about 5 mm, as shown. Only use the front screws when fitting a 900 mm wide cooker hood in a 600 mm wide wall unit.

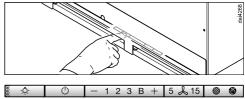

For safety reasons it is essential that the cooker hood is only fitted into a wall unit which is already installed. It cannot be fitted into the wall unit before the wall unit is installed.

Fit the cooker hood into the wall unit from below. Guide it back over the safety notches until it is correctly hung in the wall unit. To secure the cooker hood in the wall unit, the deflector plate must be extended. Electrical connection is required to do this.

Before connecting the cooker hood to the electricity supply, please see "Electrical connection" and "Warning and Safety instructions".

Connect the cooker hood to the electricity supply.

The controls can now be accessed through the grease filter slot.

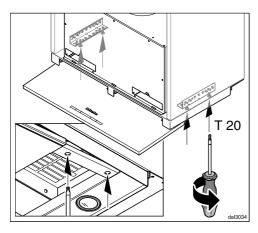

■ Press the On/Off control ().

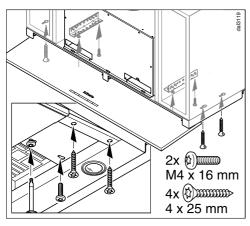

The fan switches on and the deflector plate extends.

When the deflector plate is extended, disconnect the cooker hood from the electricity supply.

The fan switches off and the deflector plate remains extended.

Tighten the four fixing screws from below.

When fitting a 900 mm wide cooker hood in a 600 mm wide wall unit, insert the two rear screws at this stage.

If the wall unit has side sections, you will also need to secure it to the base on either side.

Reconnect the cooker hood to the electricity supply.

The fan switches on again.

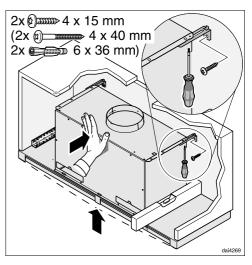

■ Press the On/Off control ①.

The fan switches off. The deflector plate retracts.

When fitting a 900 mm wide cooker hood into a 900 mm wide housing unit without side base supports, additional alignment and securing of the cooker hood is required. This is done using the two brackets on the back wall of the unit.

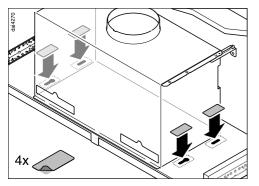

If the wall unit does not have a solid back panel, the cooker hood can be secured directly to the wall using the screws and plugs supplied.

An angled key is supplied in case the screws are difficult to access.

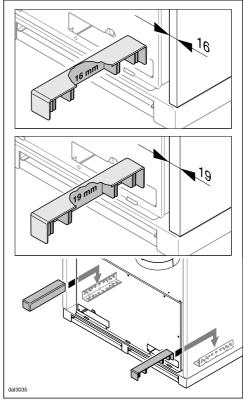

- Loosen the retaining bracket screws and push the brackets back against the rear wall.
- Align the cooker hood and mark the position of the fixing holes in the wall unit.
- Now secure the brackets to the wall unit.

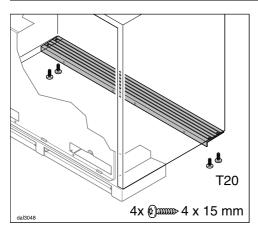

■ Realign the cooker hood and tighten up the screws on the housing.

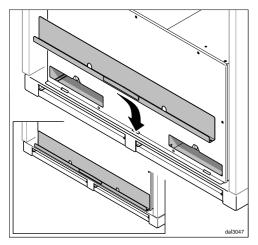

■ Conceal the deflector plate fixing holes that are not required. Suitable adhesive covers are supplied.

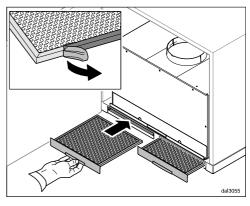

■ The covers for the brackets are designed for 16 mm and 19 mm thick unit sides. Turn the covers so that they are in the appropriate position and fit them onto the brackets.

Secure the spacer strip to the bottom of the wall unit as well.

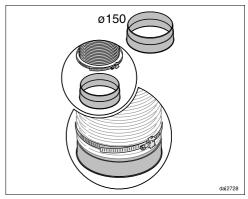

Insert the cover for the charcoal filter slots as shown and close it. It is held in place by magnets.

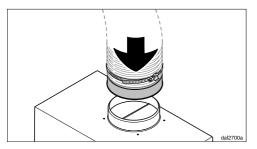

■ Take the grease filters out and remove any protective foil. Replace the grease filters.

Connecting the exhaust ducting

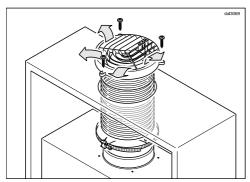

■ Attach the exhaust ducting, e.g. flexible hose, to the exhaust connection using a hose clip (available as an optional accessory).

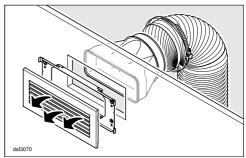

- Attach the exhaust ducting to the exhaust connection on the cooker hood.
- See "Exhaust ducting" for more detailed instructions on fitting the exhaust ducting.

Setting up recirculation mode

If site conditions are not suitable for the cooker hood to be used with an exhaust duct, the cooker hood must be set up for recirculation mode. A conversion kit, available through your dealer or from Miele, is required to operate the cooker hood in recirculation mode. You will also need an charcoal filter (see "Technical data").

Conversion kit DUU 150 with a plastic grille is suitable for fitting in a nonvisible area at the top of the wall unit.

Conversion kit DUU 151 with a stainless steel grille is recommended if the grille is to be fitted in an area which is visible.

- Fit the conversion kit as described in the installation instructions supplied with it. Make sure that the slats in the exhaust grille point towards the centre of the room and not towards a wall or the ceiling.
- Fit the charcoal filters (see "Cleaning and care").

Connection for air extraction

If the cooker hood is used at the same time as a heating appliance that relies on oxygen from the same room, there is a risk in certain circumstances of toxic fumes building up.

It is essential that the "Warning and Safety" instructions are observed. The cooker hood should be installed according to local and national building regulations. Seek approval from the building inspector where necessary.

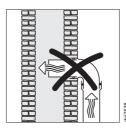

Only use smooth pipes or flexible exhaust ducting made from approved non-flammable materials for exhaust ducting.

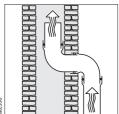

To achieve the most efficient air throughput with the lowest noise levels, please note the following:

- The diameter of the exhaust ducting must not be smaller than the crosssection of the exhaust duct (see "Appliance dimensions"). This applies in particular when using flat ducting.
- The exhaust ducting should be as short and straight as possible.
- Only use wide radius bends.
- The exhaust ducting must not be kinked or compressed.
- All connections must be strong and airtight.
- If the exhaust ducting has flaps, these must be opened whenever the cooker hood is switched on.

Any constriction of the air throughput will reduce extraction performance and increase operating noise.

Flue

If the exhaust air is to be ducted into a flue, the ducting must be directed in the flow direction of the flue.

If the flue is used by several ventilation units, the cross-section of the flue must be large enough.

Non-return flap

Use a non-return flap in the exhaust system.

A non-return flap ensures that when the cooker hood is not in operation, the duct is closed to prevent unwanted exchange of room air and outside air.

If the exhaust is ducted through an outside wall, a Miele wall vent or roof vent (available as an optional accessory) is recommended. Both of these have a built-in non-return flap.

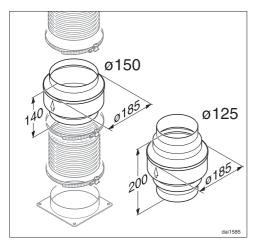

If the on-site ventilation system does not have a non-return flap, you can purchase one as an optional accessory.

Condensation

If the exhaust ducting is to run through cool rooms or ceiling space, for example, the significant variations in

temperature between the different areas can cause condensation to form. Insulate the exhaust ducting to reduce temperature variations.

If the exhaust ducting is to be laid horizontally, it must be laid with a downwards sloping gradient of at least 1 cm per meter. This is to ensure that condensation cannot drain back into the cooker hood.

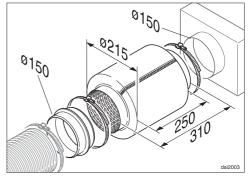

In addition to insulating the exhaust ducting, it is advisable to also install a condensate trap for collecting and evaporating any potential condensation.

Condensate traps for 125 mm or 150 mm diameter exhaust ducting are available as optional accessories.

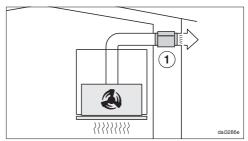

When installing a condensate trap, ensure that it is positioned vertically and as closely as possible to the cooker hood above the exhaust connection. The arrow on the casing indicates the direction of airflow.

Miele shall not accept warranty claims for any functional defects or damage caused by inadequate exhaust ducting.

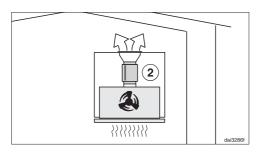

Silencer

To reduce noise levels even further, a silencer (optional accessory) can be installed in the exhaust ducting.

In extraction mode, the silencer not only reduces noise from the fan outside the house, but also sounds originating outside reaching the kitchen through the exhaust ducting (e.g. traffic noise). For this reason, the silencer must be positioned as close as possible to the ducting exit ①.

In recirculation mode, the silencer needs to be positioned between the exhaust vent and the exhaust grille ②. Check that there is sufficient space.

Electrical connection

Refer to the notes in "Electrical connection" and "Warnings and safety notes" before connecting to the power supply.

The connection data (voltage, frequency) on the data plate must match the data of the mains power supply. The position of the data plate is explained in the "Service" chapter.

The cooker hood is equipped with a power cable and a safety plug.

The connection must be made via a socket which remains accessible after the cooker hood has been installed. If the socket is no longer accessible after installation or if you are using a hard-wired connection, there must be a suitable means of disconnection for all poles in the household electrical system which meets the requirements of overvoltage category III.

Safety can be increased by fitting the appliance with a residual current device.

Only qualified electricians are permitted to carry out work on the household electrical system.

This appliance must be earthed.

Technical data

Fan motor	80 W
Hob lighting	
DA 3668	2 x 3 W
DA 3698	3 x 3 W
Total rated load	
DA 3668	86 W
DA 3698	89 W
Mains voltage, frequency	AC 230 V, 50 Hz
Fuse rating	3 A
Mains connection cable length	1.5 m
Weight	
DA 3668	16 kg
DA 3698	19 kg

WiFi module

Frequency band	2.400-2.4835 GHz
Maximum transmission power	< 100 mW

Special accessories for recirculation mode

DUU 150 or DUU 151 conversion kit and DKF 19-P charcoal filter set. The set contains two active charcoal filters.

Technical data

Conformity declaration

Miele hereby declares that this cooker hood complies with Directive 2014/53/EU.

The complete text of the EU declaration of conformity is available from one of the following internet addresses:

- Products, Download from www.miele.co.uk
- For service, information, operating instructions etc: go to www.miele.co.uk/ domestic/customer-information-385.htm and enter the name of the product or the serial number

Note for test institutes

Energy efficiency must be calculated using extraction mode. The cooker hood is set up ex-works for recirculation mode. To re-set it for extraction mode the operating hours counter for the charcoal filter(s) has to be deactivated (see "Before using for the first time").

Airborne acoustical A-weighted sound power emissions (max. speed) Airborne acoustical A-weighted sound power emissions (intensive or boost setting) Electrical power input at best efficiency point Power consumption in off mode (P _o) Power consumption in standby mode (P _s) Nominal power of lighting system Average illumination of the lighting system on the cooking surface 51 dB 63 dB 93,0 W 90,0 W 40,0 W	Air pressure at best efficiency point	356 Pa		
Airborne acoustical A-weighted sound power emissions (intensive or boost setting) Electrical power input at best efficiency point Power consumption in off mode (P _o) Power consumption in standby mode (P _s) Nominal power of lighting system Average illumination of the lighting system on the cooking surface 63 dB 93,0 W 0,35 W	Airborne acoustical A-weighted sound power emissions (min. speed)	36 dB		
boost setting) Electrical power input at best efficiency point 93,0 W Power consumption in off mode (P _o) W Power consumption in standby mode (P _s) 0,35 W Nominal power of lighting system 6,0 W Average illumination of the lighting system on the cooking surface 420 lx	Airborne acoustical A-weighted sound power emissions (max. speed)	51 dB		
Power consumption in off mode (P _o) Power consumption in standby mode (P _s) Nominal power of lighting system Average illumination of the lighting system on the cooking surface 420 lx	Airborne acoustical A-weighted sound power emissions (intensive or boost setting)	63 dB		
Power consumption in standby mode (P _s) Nominal power of lighting system Average illumination of the lighting system on the cooking surface 420 lx	Electrical power input at best efficiency point	93,0 W		
Nominal power of lighting system 6,0 W Average illumination of the lighting system on the cooking surface 420 lx	Power consumption in off mode (P _o)	W		
Average illumination of the lighting system on the cooking surface 420 lx	Power consumption in standby mode (P _s)	0,35 W		
	Nominal power of lighting system	6,0 W		
Time increase factor 0,6	Average illumination of the lighting system on the cooking surface	420 lx		
	Time increase factor	0,6		

Technical data

Data sheet for household cooker hoods

In acc. with delegated regulation (EU) No. 65/2014 and regulation (EU) No. 66/2014

MIELE			
Model name / identifier	DA 3698		
Annual Energy Consumption (AEC _{hood})	25,6 kWh/year		
Energy efficiency class	A++		
Energy efficiency index (EEI _{hood})	36,7		
Fluid Dynamic Efficiency (FDE _{hood})	39,4		
Fluid Dynamic Efficiency class			
A (most efficient) to G (least efficient)	A		
Lighting Efficiency (LE _{hood})	55,6 lx/W		
Lighting Efficiency class			
A (most efficient) to G (least efficient)	A		
Grease Filtering Efficiency	82,8%		
Grease Filtering Efficiency class			
A (most efficient) to G (least efficient)	С		
Airflow at best efficiency point	358,1 m ³ /h		
Air flow (min. speed)	190 m ³ /h		
Air flow (max. speed)	400 m ³ /h		
Air flow (intensive or boost setting)	635 m ³ /h		
Max. air flow (Q _{max})	635 m ³ /h		
Air pressure at best efficiency point	357 Pa		
Airborne acoustical A-weighted sound power emissions (min. speed)	36 dB		
Airborne acoustical A-weighted sound power emissions (max. speed)	51 dB		
Airborne acoustical A-weighted sound power emissions (intensive or boost setting)	63 dB		
Electrical power input at best efficiency point	90,0 W		
Power consumption in off mode (P _o)	W		
Power consumption in standby mode (P _s)	0,35 W		
Nominal power of lighting system	9,0 W		
Average illumination of the lighting system on the cooking surface	500 lx		
Time increase factor	0,6
