

Hygiene tips

on dealing with cleaning textiles

- Collect used cleaning cloths and mops in appropriate containers
- Separate clean from unclean areas in the laundry
- Select the correct programme; use disinfection cycles as appropriate
- Make sure when manually dispensing detergent that the prescribed quantity is properly measured and that an appropriate temperature for the detergent is set
- Carefully select the intended programmes and parameters for reprocessing cleaning textiles with subsequent conditioning for re-use
- Clean and disinfect the door area and the control panel after unloading the washing machine
- Sort and place cleaning textiles in clean/disinfected containers on removal
- Wash potentially contaminated workwear in the laundry in order to protect yourself and others
- Wear appropriate protective gear over workwear in accordance with occupational safety and hygiene regulations
