# Fast and Efficient Loading System for Laboratory Glassware

## Innovation for optimum loading

With EasyLoad, Miele Professional has reinvented the loading of laboratory glasswashers. The innovative system makes loading faster and more reliable as expensive load items are automatically and properly positioned in the load carrier. Newly developed injector nozzles guarantee the thorough cleaning of internal surfaces – even the surfaces which rest on the tops of nozzles. In addition to this, much more efficient use is made of the space in the chamber.

EasyLoad allows configurations to suit individual needs – and can be retrofitted with ease at any time.

- New injector system for all common injector modules and a wide range of additional load carriers
- Optimum use of available chamber height
- Particularly fast and simple arrangement of load items
- Thorough internal cleaning of glassware of all shapes and sizes
- Secure hold and exceptional protection of materials during a wash cycle

## Find out more about EasyLoad:

### Optimum use of space

- New design of racks for greater vertical clearance
- Secure hold thanks to wider supports

### Safe wash results

- Reliable cleaning results even on glassware not placed over nozzles

### Fast and simple loading

- No manual height adjustment required thanks to intelligent design of nozzles and holder racks
- Correct and automatic positioning of glassware thanks to flexible holder racks

# Convincing Benefits of Machine-Based Cleaning of Laboratory Glassware and Equipment

Glitch-free and fast experiments and analyses are a quality feature in any laboratory. Reliably cleaned laboratory glassware is a prerequisite: Only this approach is able to guarantee reproducibly good results. Manual cleaning, however, is hardly able to ensure consistently good results in the reprocessing of glassware. And there are numerous other downsides. Only machine-based reprocessing ensuring analytical levels of quality guarantee the consistency and precision required in everyday laboratory life.

**Learn more about the benefits of machine-based  
laboratory glassware reprocessing:**

## Benefits of machine-based cleaning

- First-class and safe cleaning producing consistent and validatable results
- Faster reprocessing using machine-based systems v. manual cleaning: 60 glasses in 24 minutes v. 1 glass per minute
- Reduced consumption of energy, water and detergents
- Extended life cycle of laboratory glassware
- An investment in a laboratory glasswasher can pay its way in less than two years

## Disadvantages and risks of manual cleaning

- Hand washing at the sink is not ergonomic, is an unpleasant chore and takes up a great deal of time and effort
- High risk of damage to valuable laboratory glassware
- Considerable imprecision in regard to key factors: Dispensing of detergent, size and shape of cleaning brushes, duration of cleaning and pressure applied
- Health risk through inhaling aerosols, contact with chemicals and injuries from splinters

<sup>1</sup> Note: When using detergents with active chlorine, increased wear of organic materials such as plastics and elastomers in the laboratory glasswasher is to be expected. A temperature of 75°C should therefore not be exceeded in main wash cycles when using detergents containing higher concentrations of chlorine. In order to prevent such wear and tear, Miele recommends that machines be serviced annually or after 1000 operating hours. A failure to perform regular maintenance may invalidate guarantee and warranty claims. Please contact Miele Service or request an offer for a maintenance contract.

<sup>2</sup> Plastics suitable for alkaline machine-based wash according to manufacturer.

<sup>3</sup> Plastics suitable for acidic machine-based wash according to manufacturer.

## Protection First: Hygienic Cleaning of Lab Coats

In order to protect oneself and others, it is particularly important to subscribe to hygiene rules. Our Little Giants washing machines and dryers provide support in effectively cleaning lab coats and other items of personal protective equipment.

Washing protective clothing on site offers many benefits. It saves both time and money compared with contracting out laundry services. Increased process control also ensures that clothing is thoroughly cleaned in compliance with the highest of quality standards. This also increases the safety of employees in this area.

# The Machines Make the Difference – All Aspects Must Be Just Right

The washing and drying programmes on our laundry machines are the product of decades of experience and offer application technology which is tailored to individual textiles. In combination with Miele's own ProCare Tex detergents and care products, this guarantees perfect wash results. The care of laundry on site also dispenses with unnecessary transportation. You are in full control of the quality of wash performance and immaculately clean textiles are ready for use again in next to no time.

And you have access to matching dryers for the washing machines from the Little Giants series.

The sophisticated product features on Little Giants simplify everyday work in laboratories:

- Short cycles: Washing and drying programmes lasting only 87 minutes<sup>1</sup>
- Small footprint of less than 1 m<sup>2</sup>
- Intuitive touch display
- Honeycomb drum for gentle but thorough cleaning
- Product longevity: Designed for 30,000 programme cycles
- Large selection of channel-specific washing and drying programmes
- Thorough cleaning to help support infection control
- Low consumption values and running costs thanks to efficient design and build quality
- All machines offer connectivity in the form of Miele MOVE, permitting integration into the laboratory environment.

## Safe laundry care

A disinfecting wash in accordance with valid regulations can currently only be safely performed in commercial washing machines. Our washing machines from Miele Professional feature recognised disinfection programmes which ensure compliance with critical process parameters such as temperatures and temperature holding times.

## Thoroughly dried.

Moisture promotes the propagation of pathogens, in particular fungi, bacteria and other single-celled organisms. Consequently, it is imperative that textiles are fully and uniformly dried after washing. Only then can disinfected textiles be stored under controlled conditions until next used.

## Additional hygiene and safety

Miele ProHygiene: Monitoring of disinfection performance in wash process using bio-indicators

PRO Hygiene

<sup>1</sup> When using a PWM 507/508/907/908 with a programme running time of 49 minutes in the 60° programme and with a hot water connection and drying with PDR507 EL vented dryer with a running time of 37 mins.

The benefits of perfect quality management in laundry care in a laboratory

- Cleaning of lab coats in full compliance with guidelines
- Washing with approved and efficient disinfecting programmes
- Disinfection wash process is continuously monitored

- Simple logistics in a closed-loop in-house system
- Clean workwear ready for use again faster
- Cost-efficient cleaning, even of small loads

Disadvantages and uncontrollable risks of reprocessing laundry in private households

- Laundry transported through public areas
- Possible cross-contamination of private laundry
- Domestic washing machines lack suitable disinfection programmes

- Time-consuming laundry care (more workwear must be stored to ensure availability)
- Possible contamination of laundry during transportation from private home to surgery
