Rinse Aids in Comparison

Find the right rinse aid for your needs

Rinse aids improve the drying of dishware and prevent water stains on glasses, cutlery and other load items. But not all rinse aids are the same. Just as there are differences between domestic dishwashers and professional dishwashers, a distinction is also made between chemicals depending on the area of application. Various machine parameters and the washing performance are considered.

Overall, commercial dishwashing detergents are designed to meet the high demands and volumes found in commercial kitchens and facilities, whereas residential dishwashing detergents are designed for use

at home. Smaller quantities of dishes are cleaned and other factors such as skin compatibility and odor can play an important role.

The choice of dishwasher and chemicals therefore always depends on the place of use and the associated needs. In a commercial environment, ProCare Shine should be the first choice; in a domestic environment, household chemicals are mandatory.

In our overview you will find the most important differences and advice, to help you make the right selection.

Miele Professional Rinse aid for commercial use

Miele Rinse aid for residential use

Packaging units	<ul style="list-style-type: none"> • Available in two container sizes (1 and 5 liter) 	<ul style="list-style-type: none"> • Available as 500 ml bottle only
Composition	<ul style="list-style-type: none"> • Highly concentrated 	<ul style="list-style-type: none"> • Mild composition
Scent	<ul style="list-style-type: none"> • No perfume or scent 	<ul style="list-style-type: none"> • Contains perfume

Adaption to machine parameters	<ul style="list-style-type: none"> • Designed to meet the program sequences, temperatures and fast cycle times in commercial dishwashers 	<ul style="list-style-type: none"> • Designed to meet domestic dishwasher standards
Dosage and consumption	<ul style="list-style-type: none"> • Suitable for automatic dispensing • Allows efficient dispensing and predictable consumption by adhering to the recommended dosage quantity automatically 	<ul style="list-style-type: none"> • Manual refill of dispensing compartment • Consumption depends on dishwasher and individual refill dosage
Combination	<ul style="list-style-type: none"> • No cross combination of chemicals (see notes) • Can be used in combination with all ProCare Shine detergents 	<ul style="list-style-type: none"> • No cross combination of chemicals (see notes)
Intended use	<ul style="list-style-type: none"> • Exclusively for use in commercial dishwashers 	<ul style="list-style-type: none"> • For use in domestic dishwashers or commercial dishwashers used in a domestic environment

Important notes

No cross combination of chemicals

Combine carefully: Only commercial chemicals or only household chemicals may be combined for the dishwashing process (detergent, rinse aid). For reasons of safety and best possible performance a cross combination is not permitted. Negative effects of a cross combination on the dishware and machine must be avoided.

Do not use ProCare Shine in residential dishwashers

Miele Professional ProCare Shine products are highly concentrated and match commercial needs. They could permanently damage domestic dishwashers as the material used is not designed for this application. In contrast, residential chemicals can be used in commercial dishwashers, depending on the intended use and environment of the machine.

Product recommendation:

ProCare Shine 12 GC professional detergent + ProCare Shine 40 professional rinse aid
