Cleaning Tabs in Comparison

Find the right cleaning tab for your needs

Dishwasher tabs clean the dishware efficiently and thoroughly. They not only prevent limescale and protect the load items, but also prevent corrosion. They are also particularly easy to use thanks to their compact shape. However, not all tabs are the same: just as there are differences between domestic and professional dishwashers, a distinction is also made between chemicals depending on the area of application. Various machine parameters and the wash performance are considered.

Overall, commercial dishwasher detergents are designed to meet the high demands and volumes found in commercial kitchens and facilities, whereas domestic

dishwasher detergents are designed for use at home. Smaller quantities of dishes are cleaned and other factors such as skin sensitivity and odour can play an important role.

The choice of dishwasher and chemicals therefore always depends on the place of use and the associated needs. In a commercial environment, ProCare Shine should be the first choice; in a domestic environment, household chemicals are mandatory.

In our overview you will find the most important differences and advice, to help you make the right selection.

Miele Professional Tabs for commercial use

Miele UltraTabs All in 1 for residential use

Packaging units	• 80 tabs in one pack	• 60 tabs in one pack
Composition	<ul style="list-style-type: none"> • Highly concentrated 1-phase cleaning tab • Separate dispensing of rinsing agent and reactivation salt required 	<ul style="list-style-type: none"> • Universal All in 1 product • Contains detergent, rinse aid and dishwasher salt
Sustainability	<ul style="list-style-type: none"> • Free from phosphates and active chlorine • Awarded the EU Ecolabel 	<ul style="list-style-type: none"> • Free from phosphates and active chlorine
Performance	<ul style="list-style-type: none"> • Powerful cleaning performance for professional requirements • Suitable for short rinsing cycles and different load items • No foam development 	<ul style="list-style-type: none"> • Suitable for common domestic cleaning requirements • Low foam development

Dosage and consumption	<ul style="list-style-type: none"> • Manual dispensing • Self-dissolving film ensures easy handling • Effective in the shortest possible amount of time 	<ul style="list-style-type: none"> • Manual dispensing • Self-dissolving film ensures easy handling
Combination	<ul style="list-style-type: none"> • No cross-combination of chemicals (see notes) • Can be used in combination with all ProCare Shine rinsing agents 	• No cross-combination of chemicals (see notes)
Intended use	• Exclusively for use in commercial dishwashers	• For use in domestic dishwashers or commercial dishwashers used in a domestic environment

Important Notes

No cross combination of chemicals

Combine carefully: For dishwashing, either only commercial chemicals or only household chemicals may be combined (detergent, rinse aid). For reasons of safety and best possible performance a cross combination is not permitted. Negative effects on the dishware and the machine must be avoided.

Do not use ProCare Shine in residential dishwashers

Miele Professional ProCare Shine products are highly concentrated and match commercial needs. They could permanently damage domestic dishwashers as the material used is not designed for this application. In contrast, residential chemicals can be used in commercial dishwashers, depending on the intended use and environment of the machine.

Product recommendation:
ProCare Shine 12 GC professional detergent
+ ProCare Shine 40 professional rinse aid
