

WetCare® —
The original with Miele added value

WetCare®

The WetCare® System: Professional fabric care for the future

There are virtually no fabrics or textiles that can challenge Miele. Silks, satins, wools and even suede can be safely cleaned with a Miele Professional Wet Care® System and thousands of cleaners worldwide are delivering impeccable results day after day with our systems. The key word is “Care.” Miele not only truly cleans garments in its systems, but cares for sensitive fabrics and textiles with special programs and its trademarked Honeycomb™ drum featuring the smallest of exit holes to better cushions fabrics.

With more than 100 years of cleaning expertise, Miele’s WetCare® systems are expertly engineered to provide the ultimate in programmability and manufactured to the highest quality and standards.

When you invest in a Miele WetCare® System, you invest in a system that not only delivers results, but will also withstand the test of time and deliver the ultimate return on your investment. With our legendary “Made in Germany” quality, the advantages are obvious:

- Special WetCare® programs for Miele washing machines and dryers
- Excellent cleaning results
- Environmentally friendly processes
- Gentle processing of sensitive fabrics
- Fabric shape retained with no matting or creasing
- Short program run times
- High levels of economy
- Durable Miele technology
- Low water and energy consumption
- No air or chemical pollution
- High hourly garment output

From the inventors of wet cleaning: Excellent in even the smallest detail

Wet

Miele Professional and a detergent manufacturer, Kreussler, invented the wet cleaning process. The first system was launched back in 1991 and was used with great success in numerous cleaning establishments and laundries. Today, the third generation of Miele wet cleaning machines is working with the latest, optimized WetCare® System. Thanks to the patented Honeycomb™ Drum, fabrics last even longer with greatly improved cleaning results and lower water and energy consumption.

With the WetCare® system, Miele once again offers professional experience for a large range of applications — and the know-how required to provide a state-of-the-art wet cleaning system:

- Wet/washing cleaning machines
- Dryers
- Cleaning processes and special programs, including bedding, curtains and waterproofing
- Miele's full parts and labor warranty
- Miele Training
- Miele WetCare® Marketing Program
- ... and Miele's exceptional service

Innovative features:

The comprehensive system for fabric cleaning and care

Care[®]

For decades Miele has led the way in the development of innovative laundry systems, cleaning and care processes. From developing the first wet cleaning system in 1991 to earning awards for the first freely programmable controls; the introduction of air recycling plus in dryers; and the launch of its Honeycomb™ drum, Miele is considered a leading innovator. And now the Miele WetCare® System encompasses these technological advantages offering a state-of-the-art system for wet cleaning today and into the future. Why Miele Wet Care® Systems:

- The only true freely programmable controller – provides more control
- Stainless steel Honeycomb™ drum – for a gentler clean that reduces fabric wear
- Baffle System in dryer contributes to more even drying
- Miele offers the highest G Force in the industry resulting in less drying time
- Residual Moisture sensors in dryer provide accurate drying times
- Air recycling system in dryers recycles 60% of air (energy efficiency)

The professional solution: Highly economical fabric care

A professional service that makes for satisfied customers — an advantage that the WetCare® System offers for a wide range of applications in cleaning establishments and professional laundries as well as hotels and care homes. Wherever it is used, the WetCare® System ensures that fabrics are treated in the best way possible. More customers are turning away from traditional dry cleaning processes and opting for a cleaning process that does not harm the environment and delivers fresh feeling and smelling garments. Wet cleaned clothes are more pleasant to wear. In addition, your employees will also appreciate the pleasant working conditions that wet cleaning creates.

Advantage: WetCare® wet cleaning allows for a multitude of fabrics

- Natural fibers such as angora, cotton, cashmere, linen, silk and wool
- Synthetic fibers such as acrylic, polyester, Sympatex®, GoreTex®, viscose and acetate
- Leather and suede
- Highly sensitive fibers

Advantage: economy

- No solvents
- No distillation residues
- No cooling water residues
- No contact water residues
- No complicated installation requirements to meet air pollution regulations
- No regulation paperwork
- Minimal space requirement
- Most economical process to clean garments

Industry leaders: Innovative technology gives Miele the edge

Miele's new wet cleaning machines now offer even gentler fabric care for the WetCare® process — thanks in part to the patented Honeycomb Drum™ whose honeycomb structure allows the fabrics to float on a protective film of water. According to research carried out by the wfk Institute, this gentle handling of laundry plays a significant role in maintaining the shape of garments. The new, freely programmable Profitronic M controls allow the user to enter individual program settings for every application; and the tried-and-tested special wet cleaning programs are further proof of the impressive powers of innovation that contribute to Miele's famous added value.

The Honeycomb Drum™ is also used in the new Miele dryers to give optimum protection for fabrics as the honeycomb structure creates a protective cushion of air during the drying process. The dryers are available with a choice of electric or steam

heating and the extremely precise, digital residual moisture control ensures those fabrics emerge with the optimum level of dryness for subsequent finishing. Because there are fewer creases, less effort is required for the finishing process, as the wfk Institute found out in its research into Miele technology.

WetCare®

With WetCare®, Miele has worked with users of Miele Professional's innovative technology to develop a wet cleaning solution that offers optimum protection of the environment. This is in keeping with Miele's principle of producing and selling products of the highest quality, which not only offer the best performance, efficiency and reliability but whose entire lifecycle is designed to have the most minimal impact on the environment.

The most important aspects of this are:

- Making the most economical use of raw materials, energy and water
- Avoiding emissions and waste as much as possible
- Using the best available environmentally friendly technologies

The new Miele washing machines:

- Reduce energy consumption by 50%*
- Reduce water consumption by 30%*
- Shorten program running times by 17%*
- Can be used as versatile all rounders or as specialist WetCare® machines
- Can be used for all types of applications: flat items and towels, work garments, outer garments

*depending on model

Systematic reliability: Miele Service

According to users, Miele's customer service is the best in the industry. Contact with Miele guarantees prompt handling of all inquiries, and the nationwide network of support locations and authorized dealers, ensure easy access to reliable and fast solutions.
